## **Data Transmittal**

TO: J. P. Chen, J. LeRose, J. Segal, D. Higinbotham DATE: 26 Jun 2008

FROM: J. Dahlberg Checked: kt #: A1170

**DETAILS:** 

Data: Step2b\HallA\BigBite\_Detector\080626A

Below are the results from the survey performed on the BigBite hadron detector package. The first set of coordinates (in millimeters) is based on the ideal Hall A target center and straight ahead beam. The second set is based on the nominal rotation angle of -48 degrees from the straight ahead beam and pitched 25 degrees. A +X is to the beam left, a +Z is downstream, and a +Y is up. The coordinate for each fiducial point is relative to the center of the survey target placed in each fiducial block. The survey target is 7.9 mm in height (standard center of tooling ball). The points on the detectors are to corner points on the detector frame. The perpendicular distance between the downstream faces of detector C1 and C2 is 764.03 mm. Note that the detector coordinates are derived from fiducial locations surveyed on March 31<sup>st</sup> 2008 (DT#1164). The detector package may not have been in the final running position at that time.
