

Thesis Progress (GMn)

- Defend Spring 2024 or Fall 2023 if possible.
- Finish up GRINCH analysis for GMn (next few months).
 - Electron detection efficiencies, pion rejection efficiencies, etc.
- Set up GRINCH analysis software for commissioning during next run.
 - (mostly done)
- Assist with preparing the GRINCH for GEn.
- Shift to GMn analysis for SBS-11 and SBS-14 when the mass replay is processed.
 - (hopefully in the next few months?)
- Take the minimum number of shifts on GEn and other experiments so I can focus on my thesis analysis.
- Write the chapter(s) of my thesis on the GRINCH.
 - (to be turned into a NIM paper).
