$G_E^n Status Report$

B. Craver

February 21, 2007

I am currently working to finalize the raster calibration. The GenBeam class has been altered to perform a running average of beam position as reported by the BPM's. This average position, along with the beam shift reported by the GenRaster class provides an event by event beam position. The evaluation of the performance of this code will be completed and posted within a week.
