(Dated: September 19, 2011)

Recently the ratio of neutron to proton structure functions F_2^n/F_2^p was extracted from a phenomenological correlation between the strength of the nuclear EMC effect and the inclusive electron nucleon cross section ratio at $x > 1$. Within conventional models of nuclear smearing, this “in-medium correction” (IMC) extraction constrains the size of nuclear effects in the deuteron structure functions, from which the neutron structure function F_2^n is usually extracted. The IMC data determine the resulting proton d/u quark distribution ratio at $x \rightarrow 1$ to lie in the range $0.14 - 0.32$ with a 90% confidence level. This is well below the SU(6) symmetry limit of 0.5 and well above the scalar diquark dominance limit of 0.

Theoretical corrections to the deuteron structure function

$$F_2^d(x, Q^2) = \int dy f_{N/d}(y, \gamma) F_2^N\left(\frac{x}{y}, Q^2\right) + \delta^{(\text{off})} F_2^d(x, Q^2),$$

$$\delta^{(\text{off})} F_2^d(x, Q^2) = \int \frac{d^3 p}{(2\pi)^3} \left(1 + \frac{\gamma p_z}{M}\right) \mathcal{C}(y, \gamma) |\Psi_d(p)|^2 (p^2 - M^2) \left. \frac{\partial F_2^N(x/y, Q^2, p^2)}{\partial p^2} \right|_{p^2=M^2} \quad (2)$$

Swelling level

Average Virtuality

$$\lambda = \left. \frac{\partial \Lambda^2}{\partial \log p^2} \right|_{p^2=M^2} = -2 \frac{\delta R_N}{R_N} \frac{\delta p^2}{M^2},$$

Theory correction depends only on λ !

Uncertainties in theoretical parameters leads to large uncertainty on d/u at $x \rightarrow 1$

PHYSICAL REVIEW D **84**, 014008 (2011)

$d/u(x \rightarrow 1)$

SU(6): $d/u=0.5$

pQCD: $d/u=0.2$

Scalar diquark
dominance: $d/u=0$

- Swelling levels considered: 1.5-1.8%
- Average virtuality calculated using AV18, CDBonn, WJC1 and WJC2 wave functions.

Theoretical Uncertainty Band

- Swelling levels considered: 1.5-1.8%
- Average virtuality calculated using AV18, CDBonn, WJC1 and WJC2 wave functions.

A Decomposition of the theoretical uncertainty band

- Swelling levels considered: 0-3% (in increments of 0.3%)
- Average virtuality calculated using AV18, CDBonn, WJC1 and WJC2 wave functions.

Fitting to the IMC extraction

Fitting to the IMC extraction

Reduced uncertainty on d/u ratio at $x \rightarrow 1$
