

# CT\_pathcorr\_sum

**A1: proton CT pathcorr after correction. Sigma = 1.181 ns**

# CT\_pathcorr\_sum

**A2: proton CT pathcorr after correction. Sigma = 1.181 ns:**

**Making cut for proton within CT at +/-3.5 ns about 0**

**Making cut for background proton at -13.5 to -10 ns section and 6.5 to 10 ns.**

Following are the parameter with Blue dot for proton within CT, Red square for background proton, and green diamond for the subtraction of the CT proton from background proton.

### W2\_sum

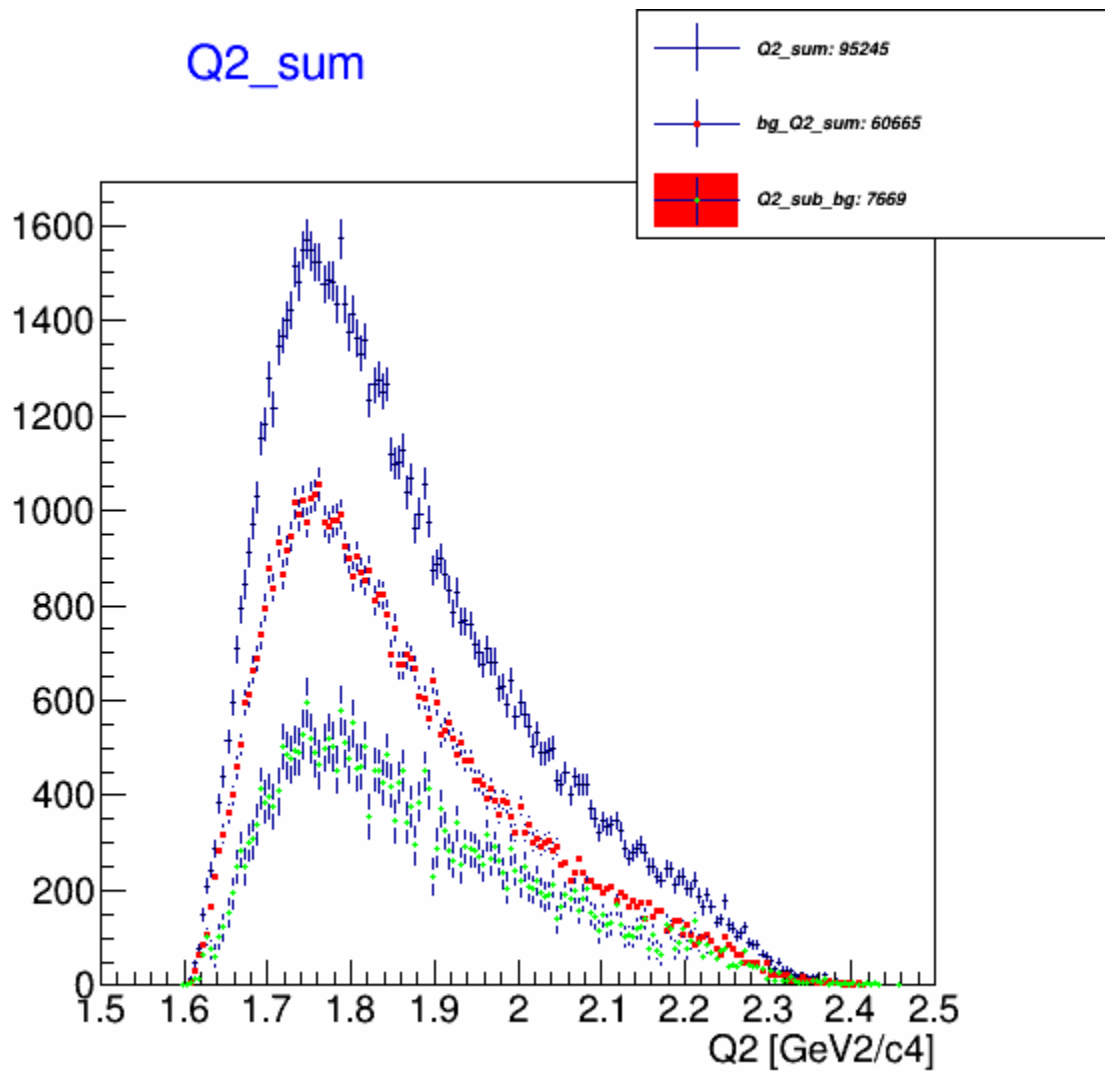

A3: W2 from (e,e')

\*\* check what wrong with this W2 seems to be too high

xbj\_sum

A4:  $xbj = Q2/(2Mp)$

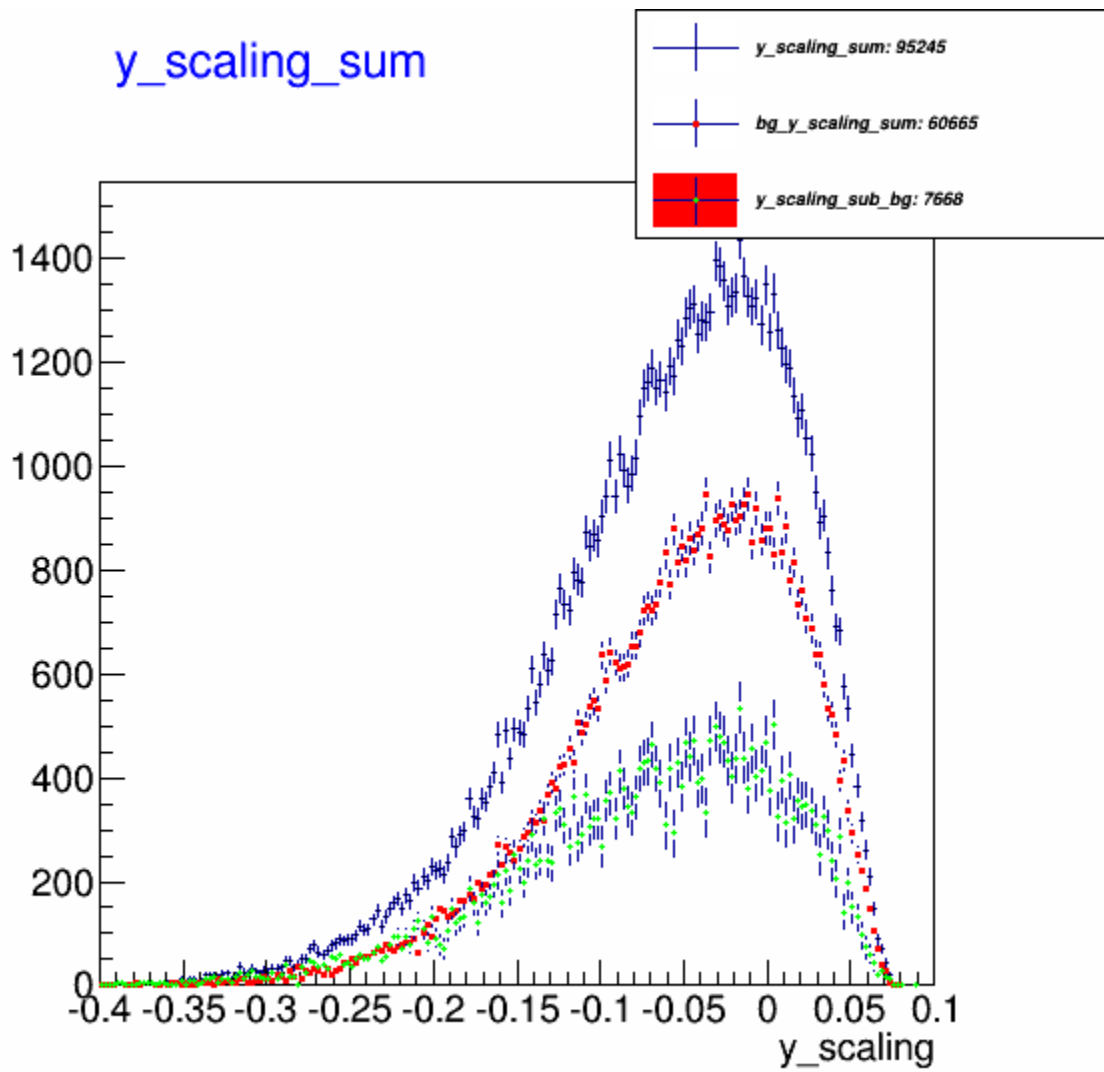

A5: Q2

q3m\_sum

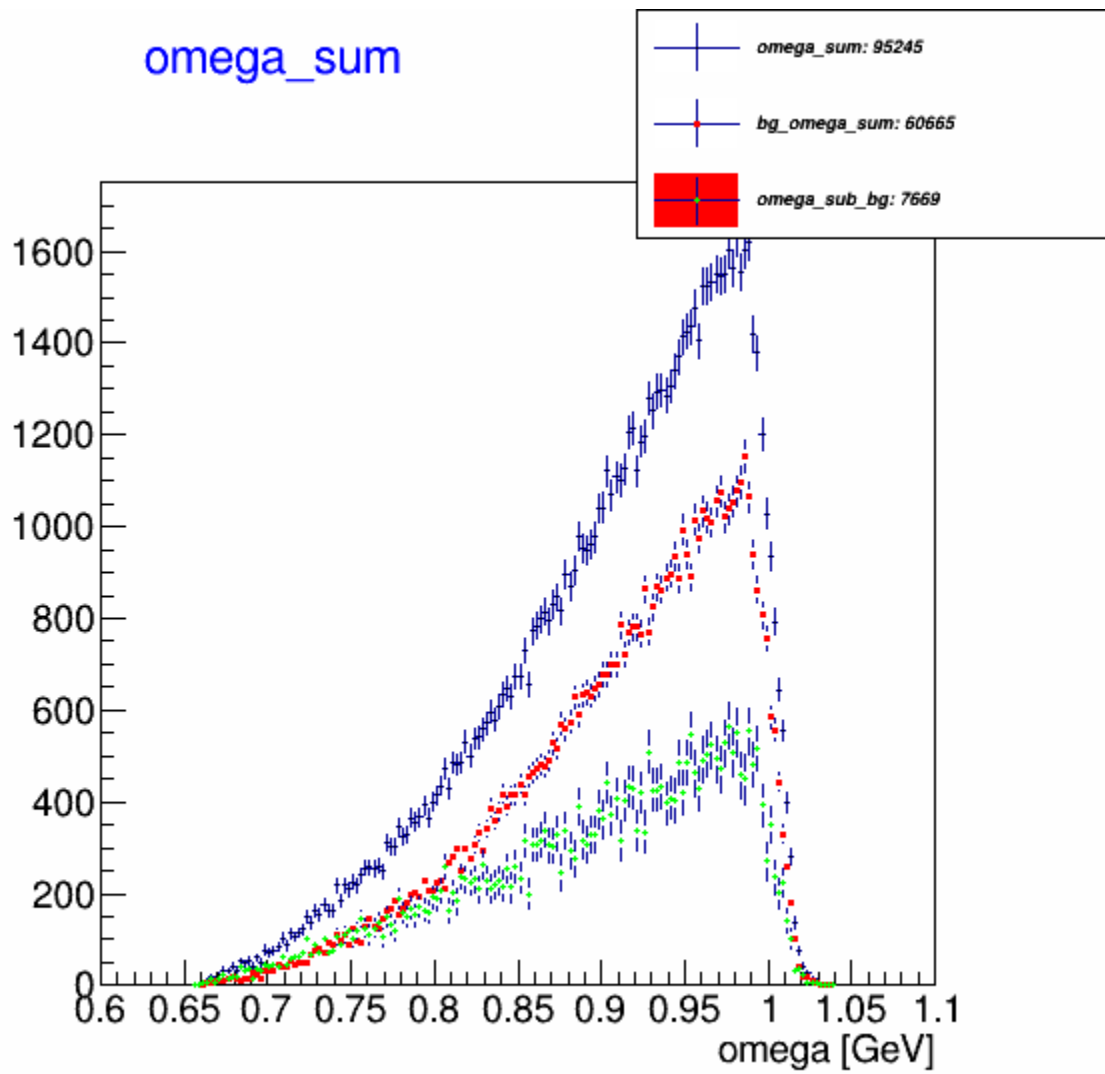

A6: |q|

A7:  $y_{\text{scaling}} = \frac{((\text{He4\_mass} + \omega) \cdot \sqrt{\lambda \cdot \lambda - \text{He3\_mass} \cdot \text{He3\_mass} \cdot W^2}) - \lambda \cdot q_{3m}}{W^2}$ ,

where

$\lambda = \frac{(\text{He3\_mass} \cdot \text{He3\_mass} - \text{proton\_mass} \cdot \text{proton\_mass} + W^2)}{2}$ ;

A8:  $\omega = E - E'$

# ANAmom\_proton\_sum

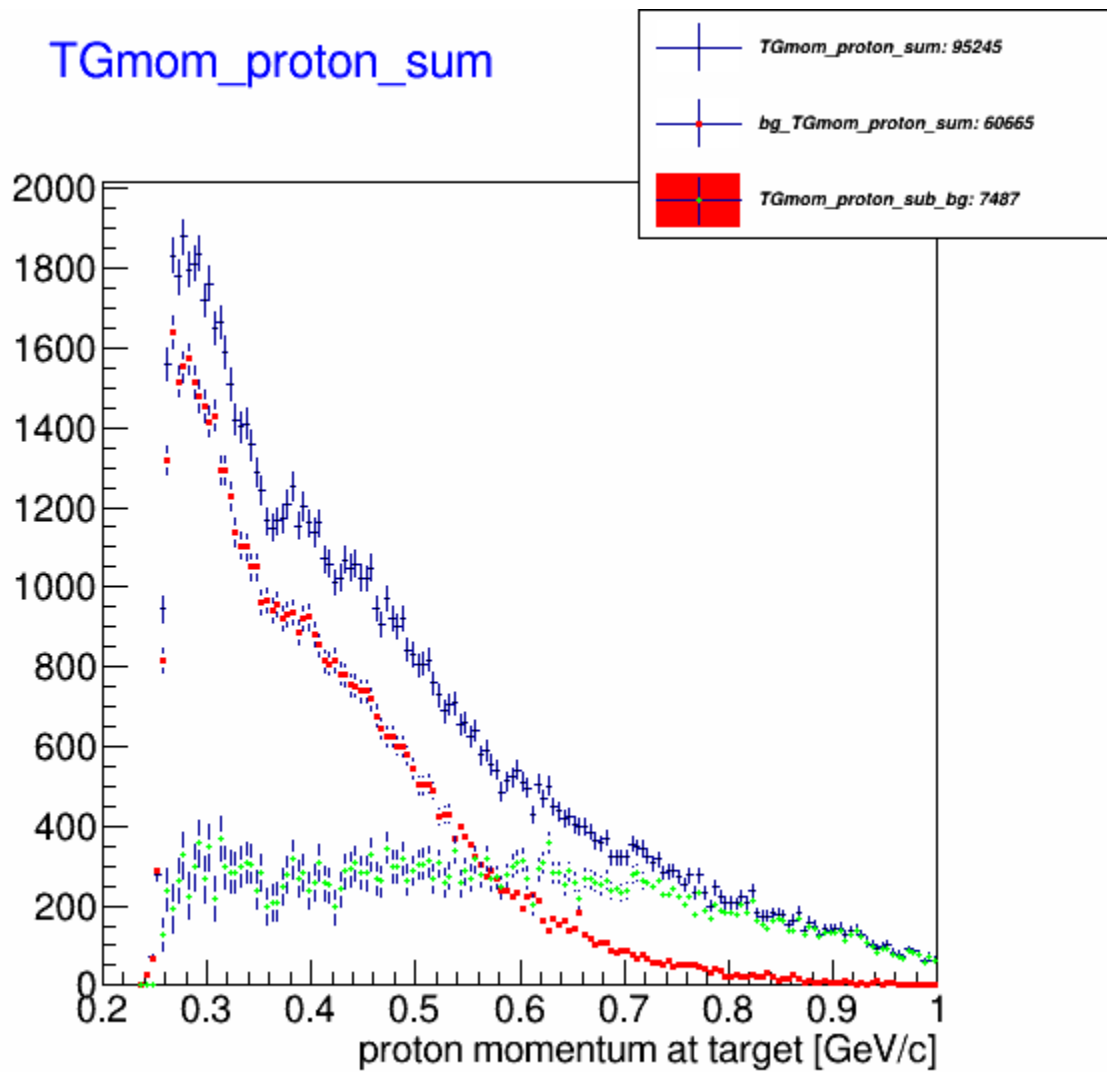

**A9: Analytical momentum at MWDC**

# MWDCmom\_proton\_sum

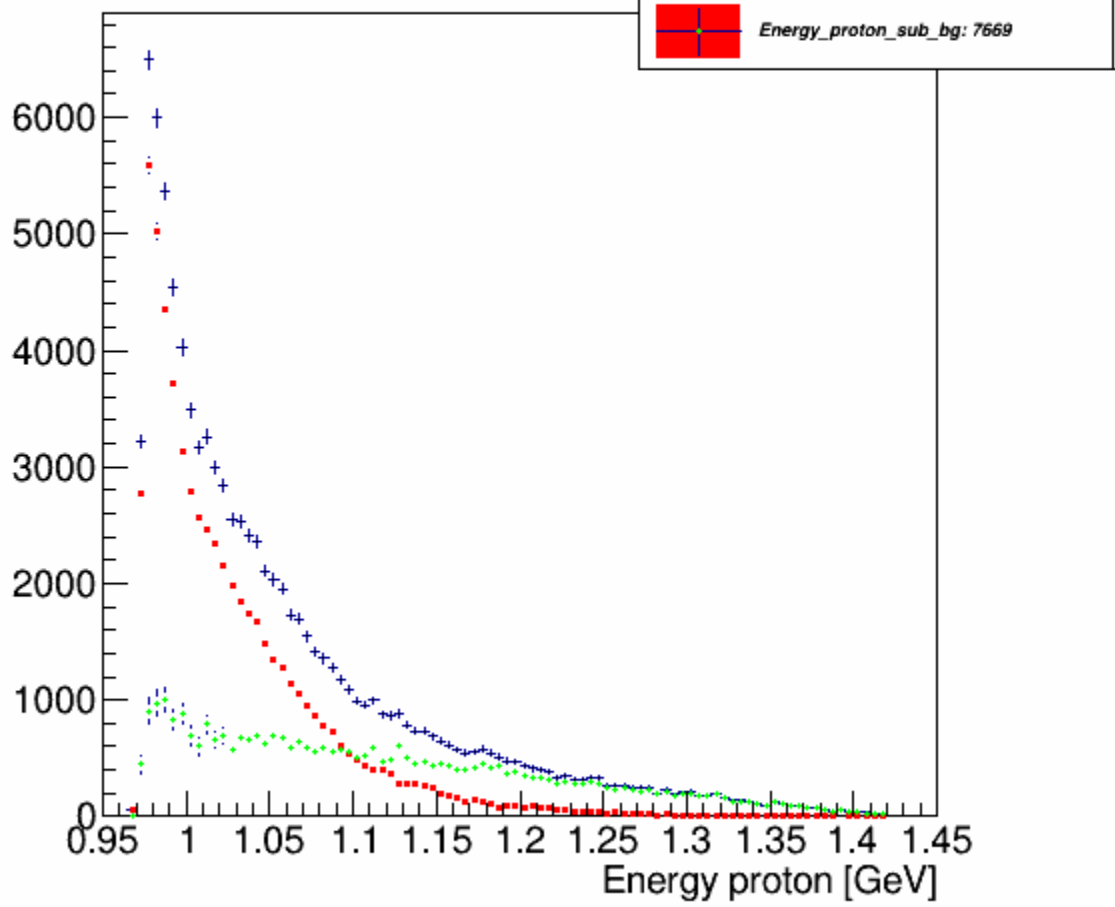

**A10: proton momentum correction at MWDC**

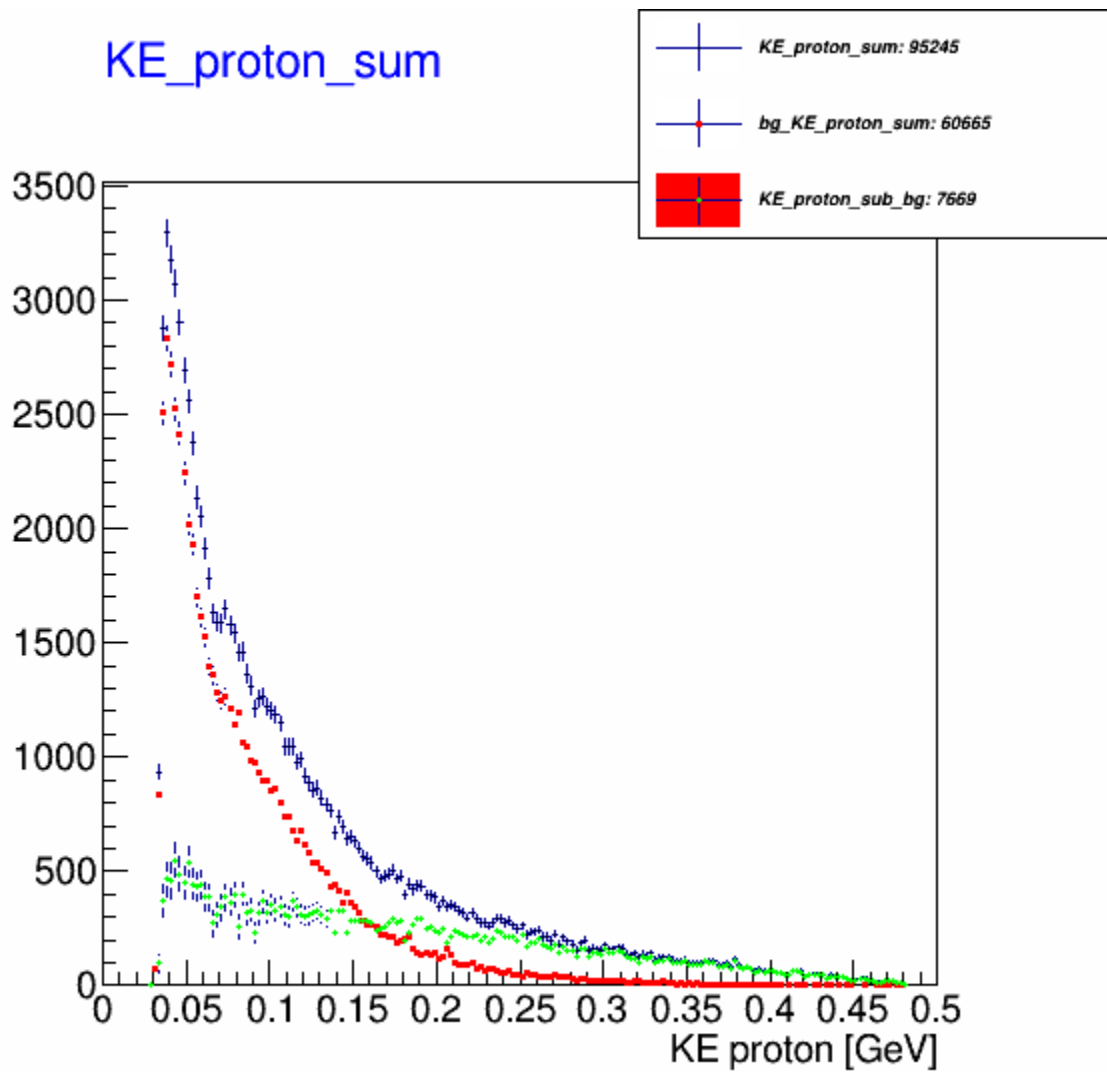

**A11: proton momentum at target**

# Energy\_proton\_sum

A12: proton Energy =  $\sqrt{M^2+p^2}$

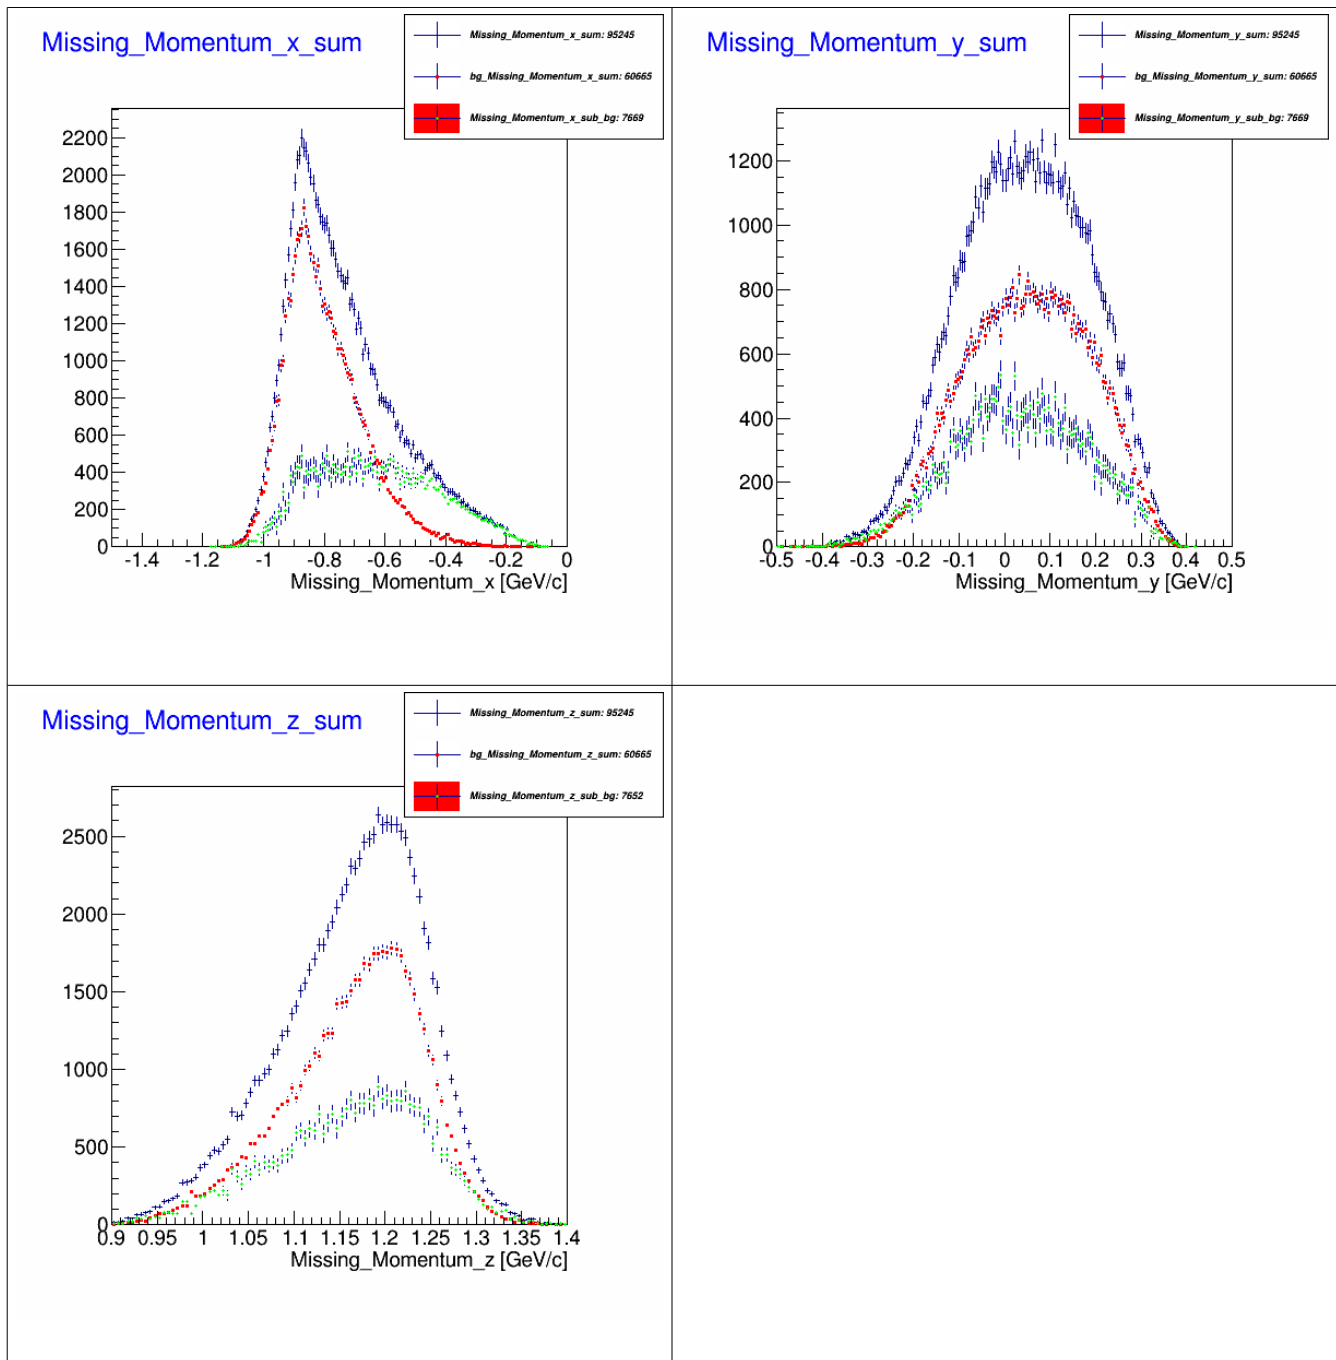

A13: proton Kinetic Energy:  $E - m_p$

## Missing\_Momentum\_sum

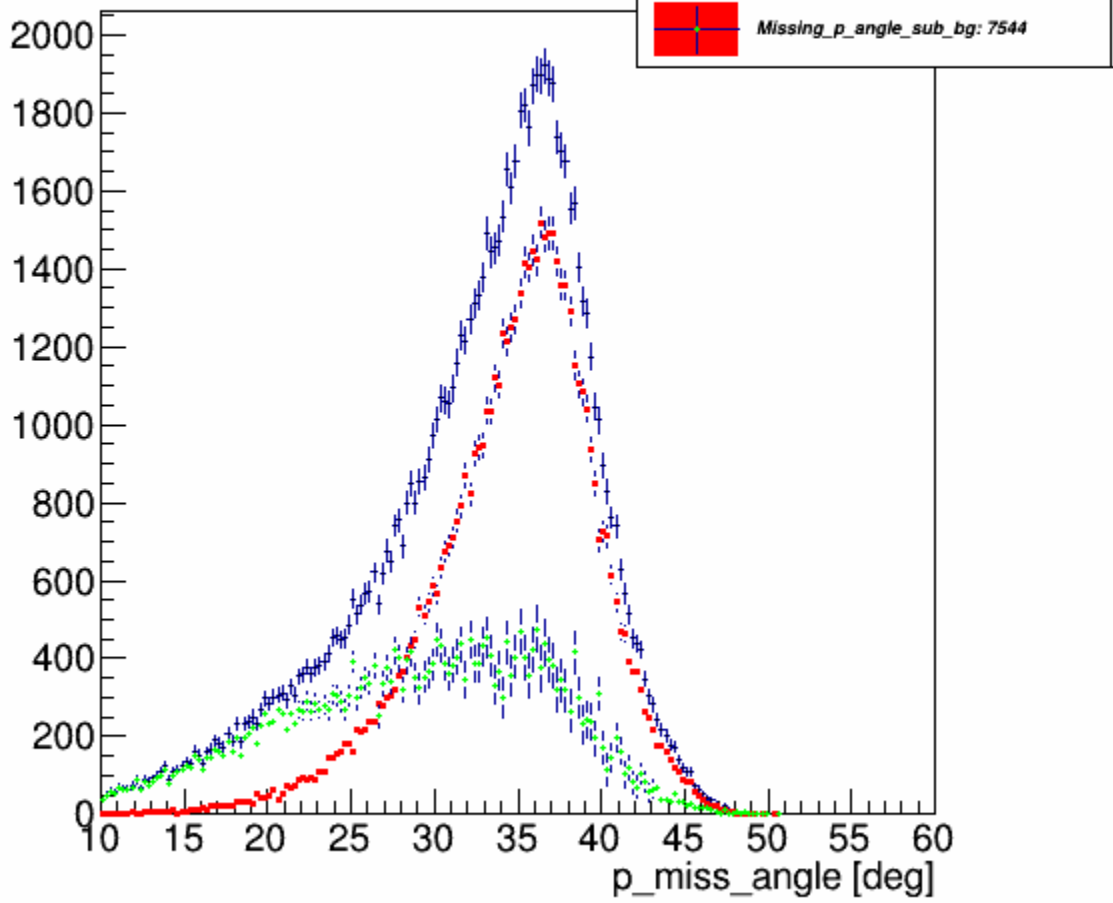

A14: Missing Momentum =  $\sqrt{\sum[(q_i - p_i)^2]}$

\*\*checking to compare whether Igor has RHRS momentum distribution to compare to this plots.

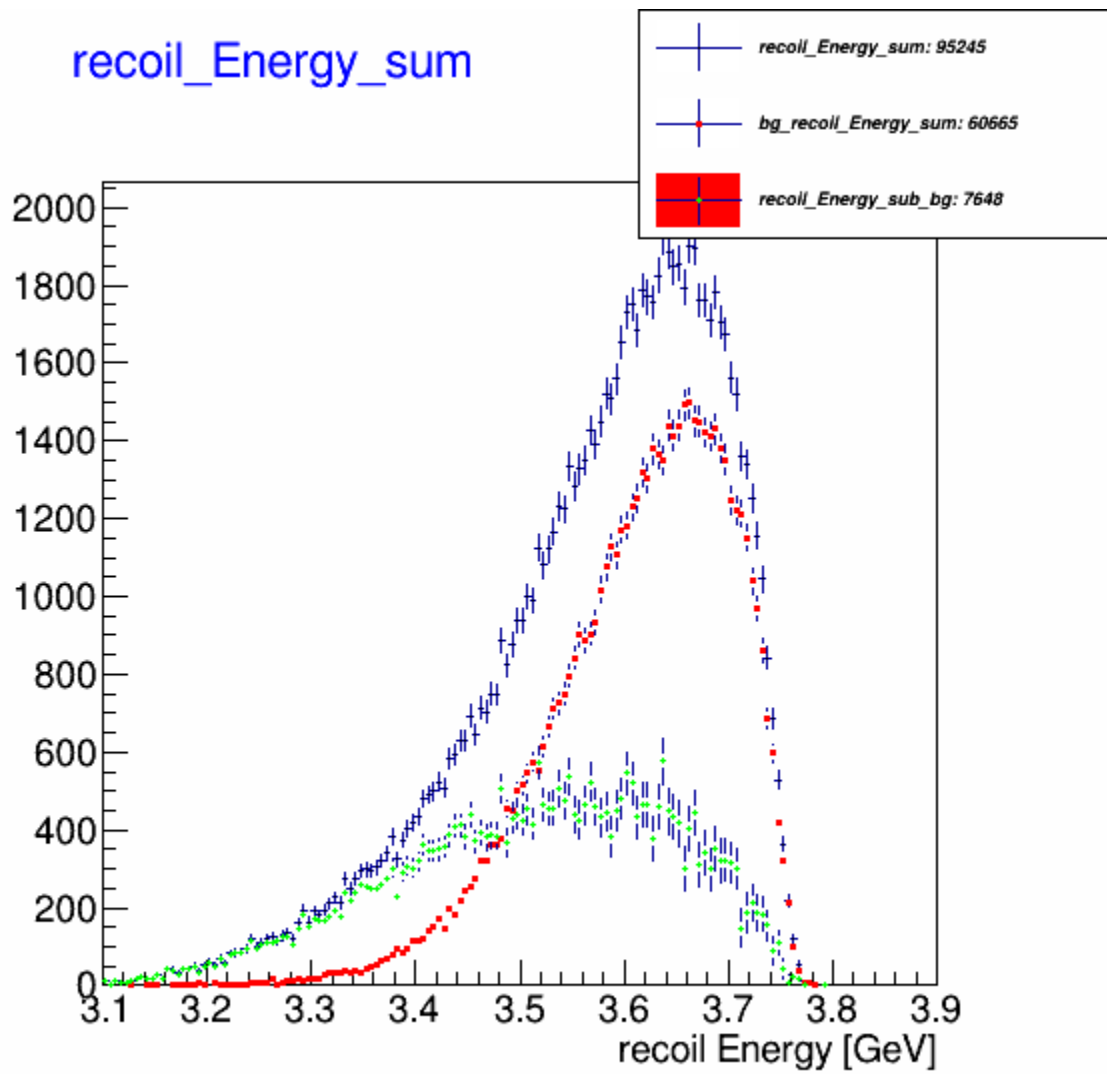

A15: Missing momentum x,y,z

# Missing\_p\_angle\_sum

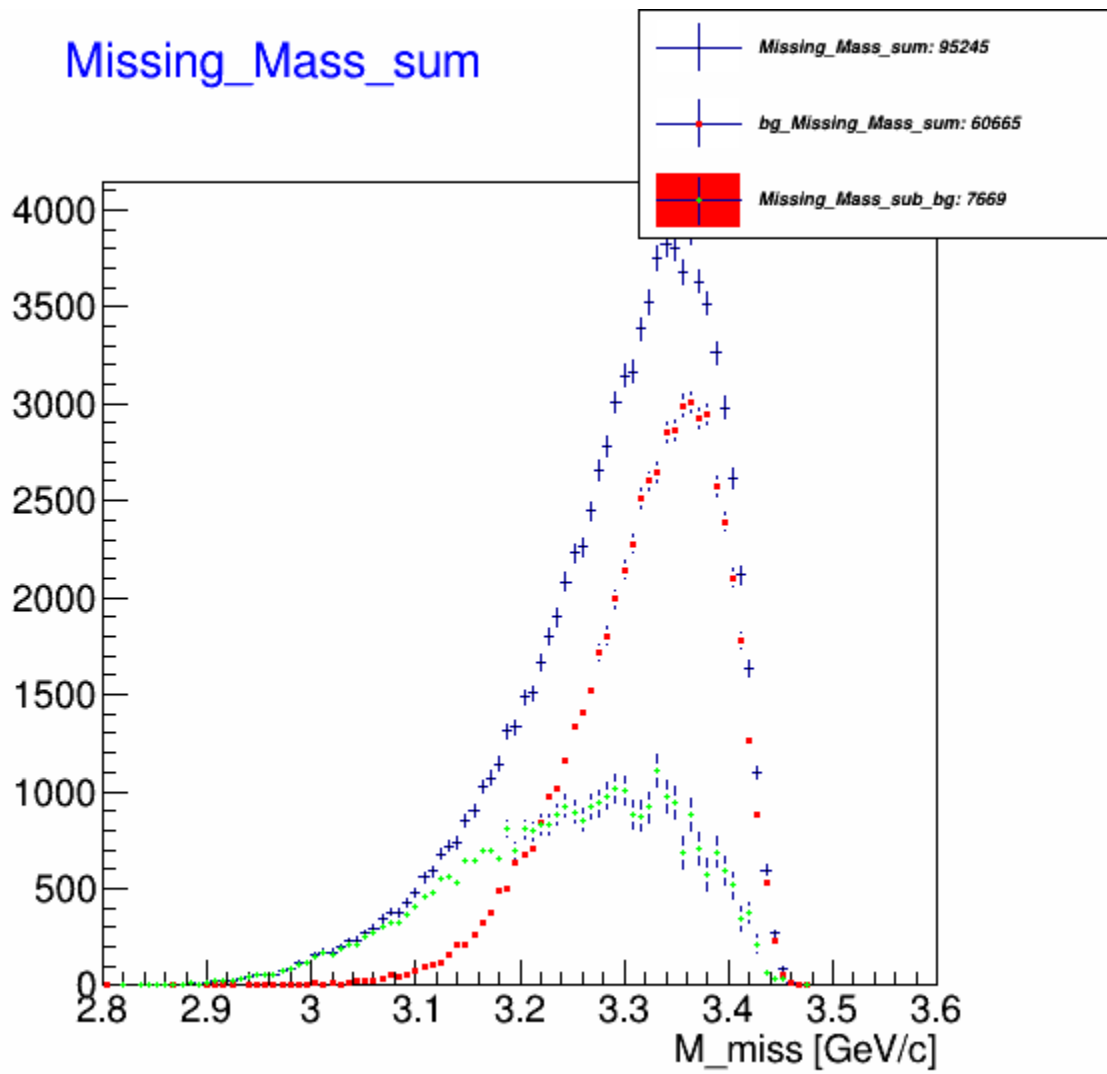

**A16: Missing momentum angle**

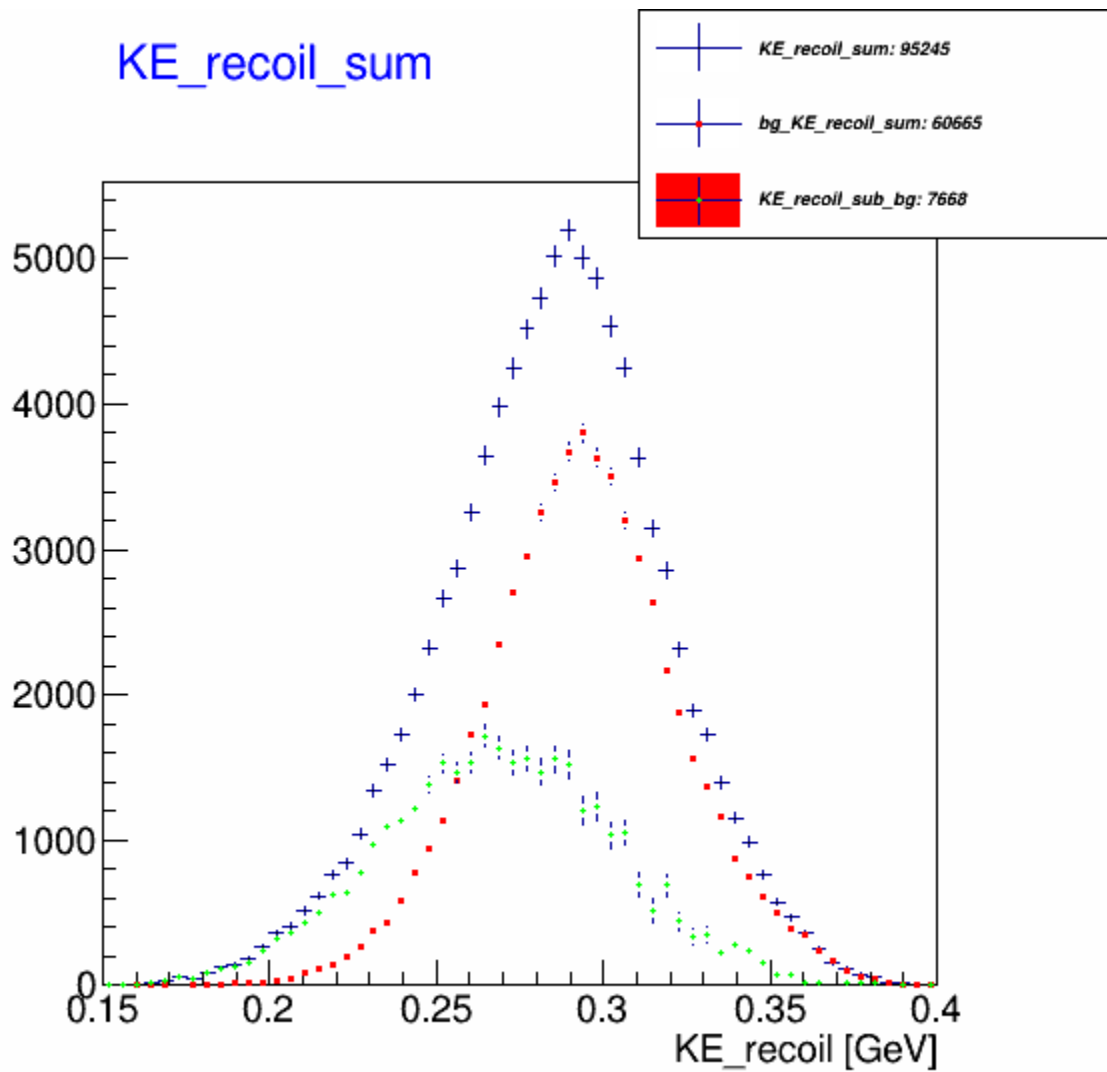

A17: recoil Energy:  $(M_{\text{he4}}) + (\text{omega}) - (\text{proton energy})$

A18: Missing Mass:  $\sqrt{E_{\text{recoil}}^2 - p_{\text{miss}}^2}$

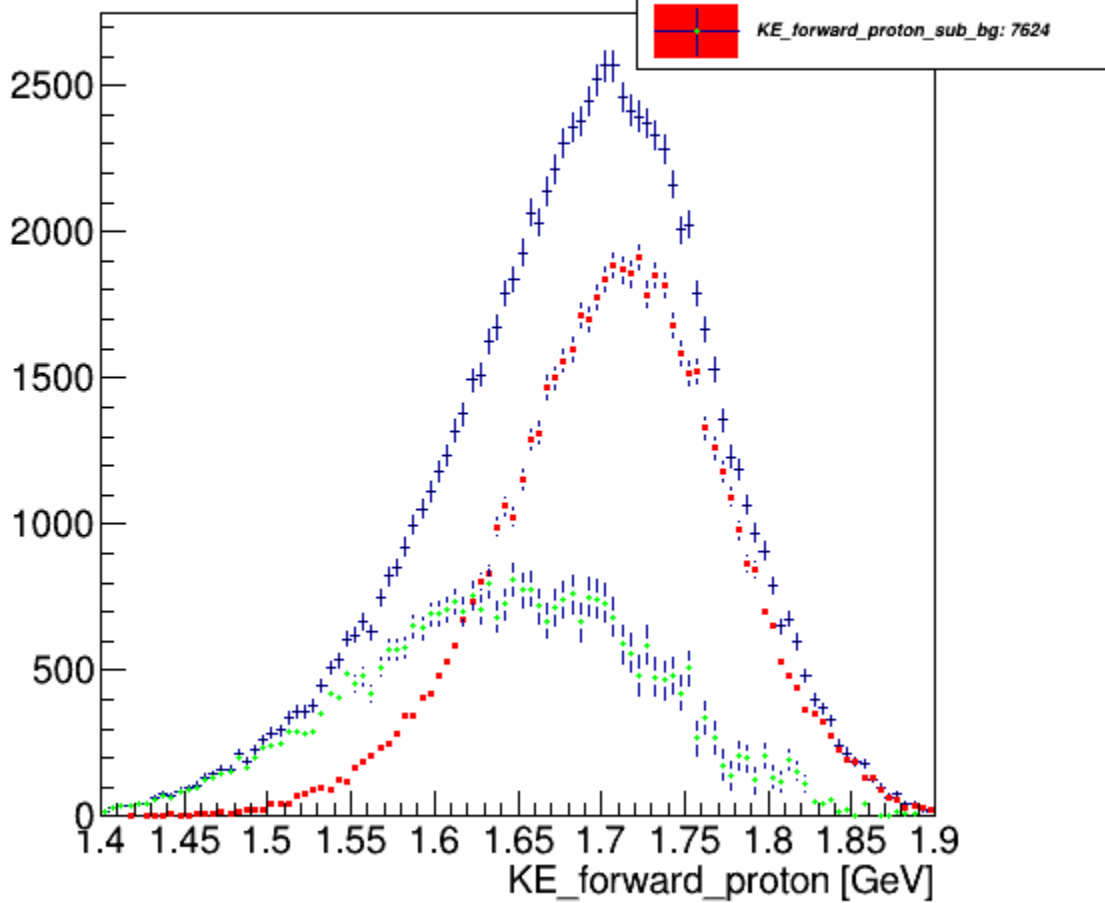

A19:  $KE\_recoil = (E\_recoil) - (M\_miss)$

# Missing\_Energy\_sum

A20: Missing Energy:  $(\omega) - (KE_{\text{proton}}) - (KE_{\text{recoil}})$

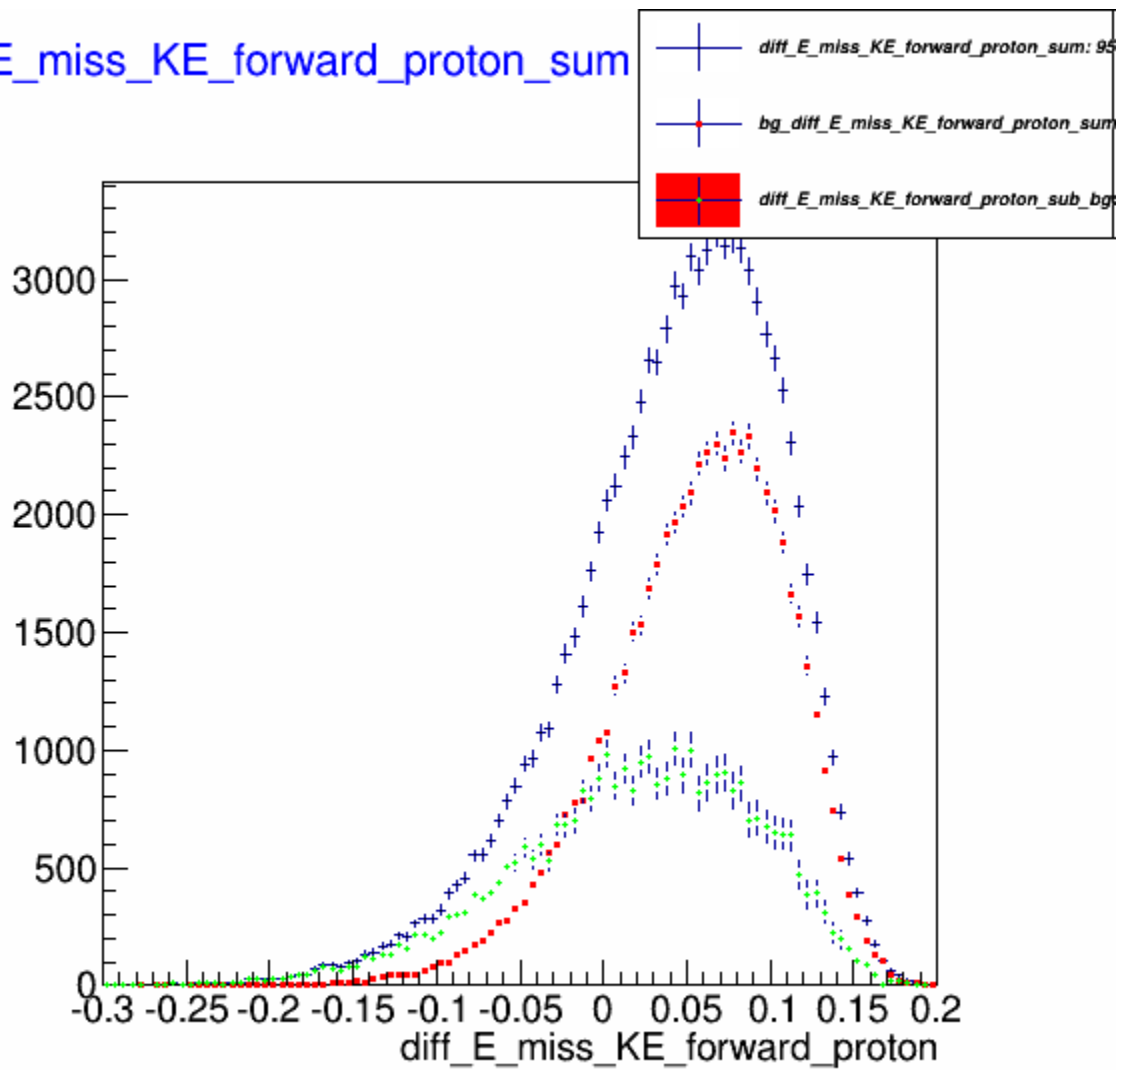

## KE\_forward\_proton\_sum

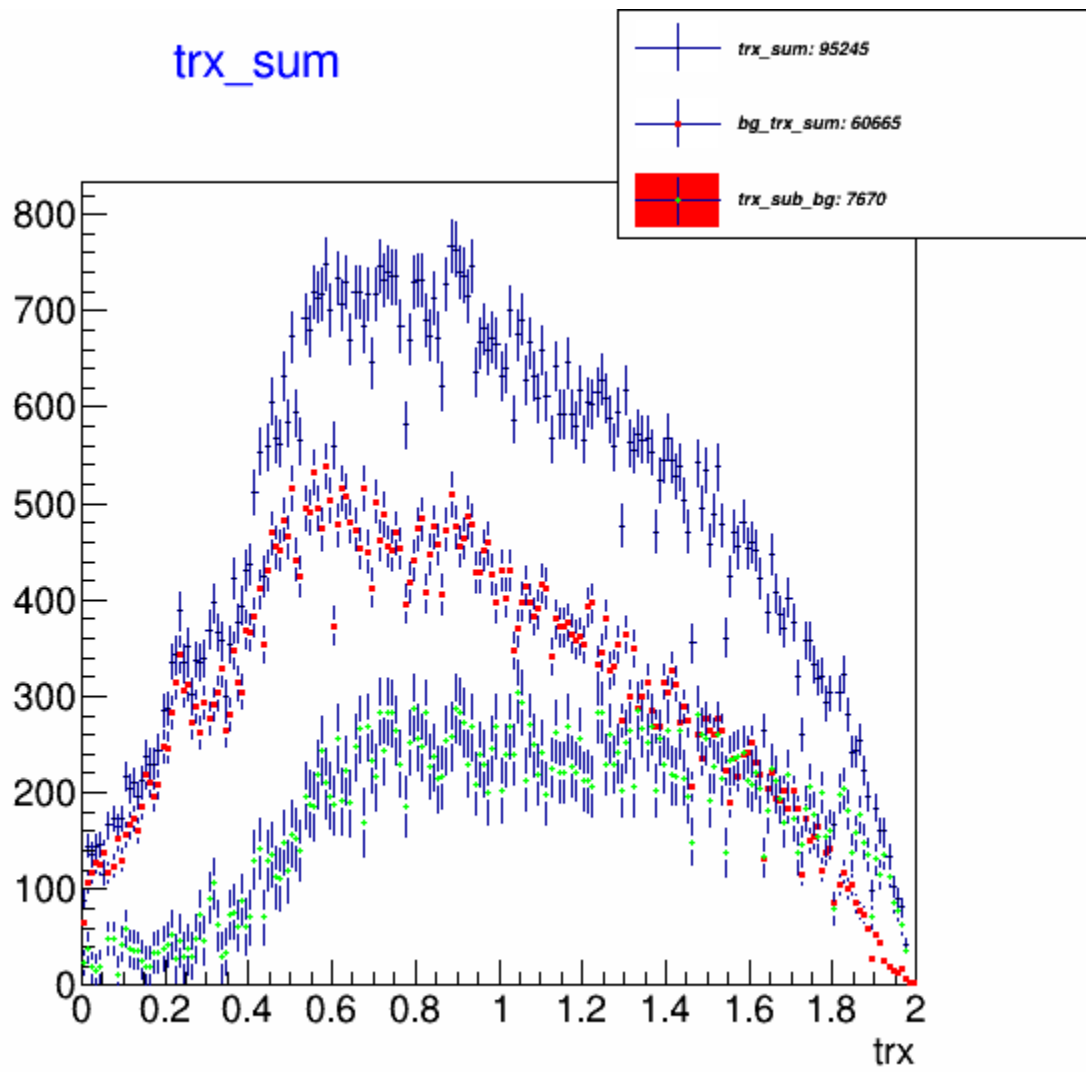

A21: Assuming all  $p_{miss}$  is for the forward proton: the KE\_forward proton is as shown.

$E_{forward} = \sqrt{M^{**2} + p_{miss}^{**2}}$  the KE\_forward =  $E_{forward} - M$

iff\_E\_miss\_KE\_forward\_proton\_sum

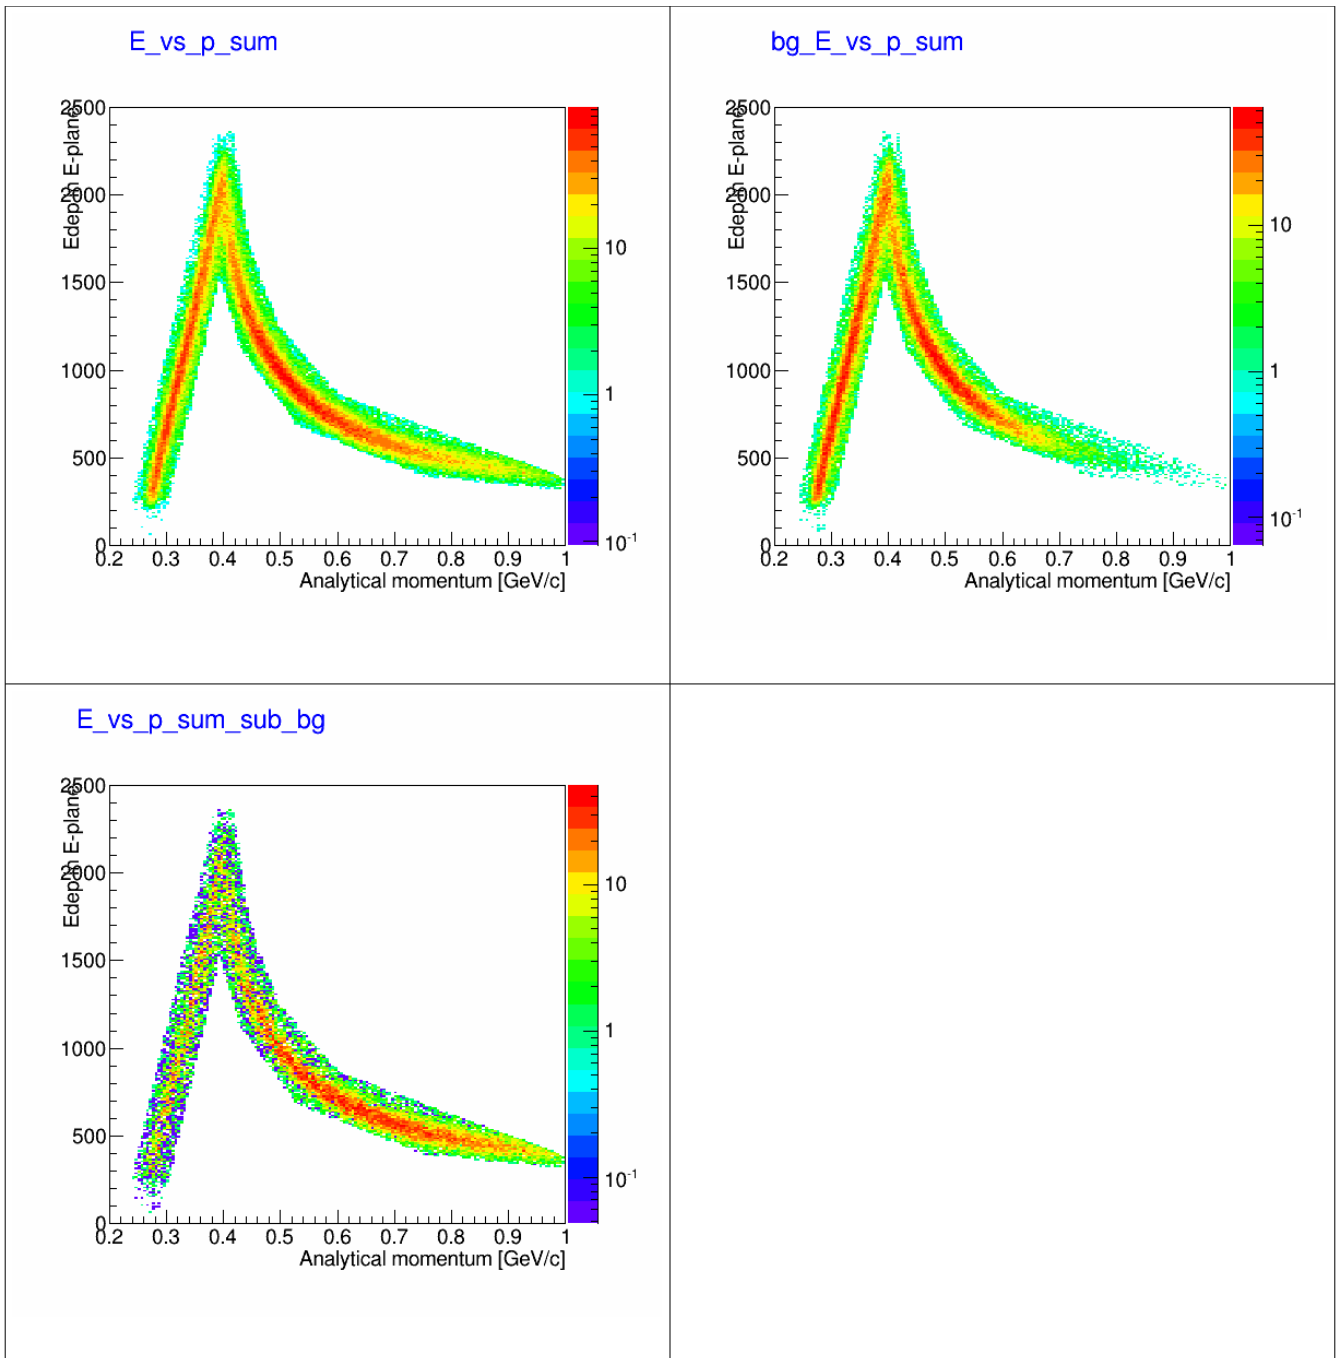

A22:  $\text{diff\_E\_miss\_KE\_forward\_proton} = E_{\text{miss}} - \text{KE\_forward\_proton} + \text{KE\_recoil}$   
 $= \omega - \text{KE\_proton} - \text{KE\_forward\_proton}$   
 $= E_{\text{miss}}^{**}$  assuming all  $p_{\text{miss}}$  go to forward proton.

**A23: track x location on E\_plane**

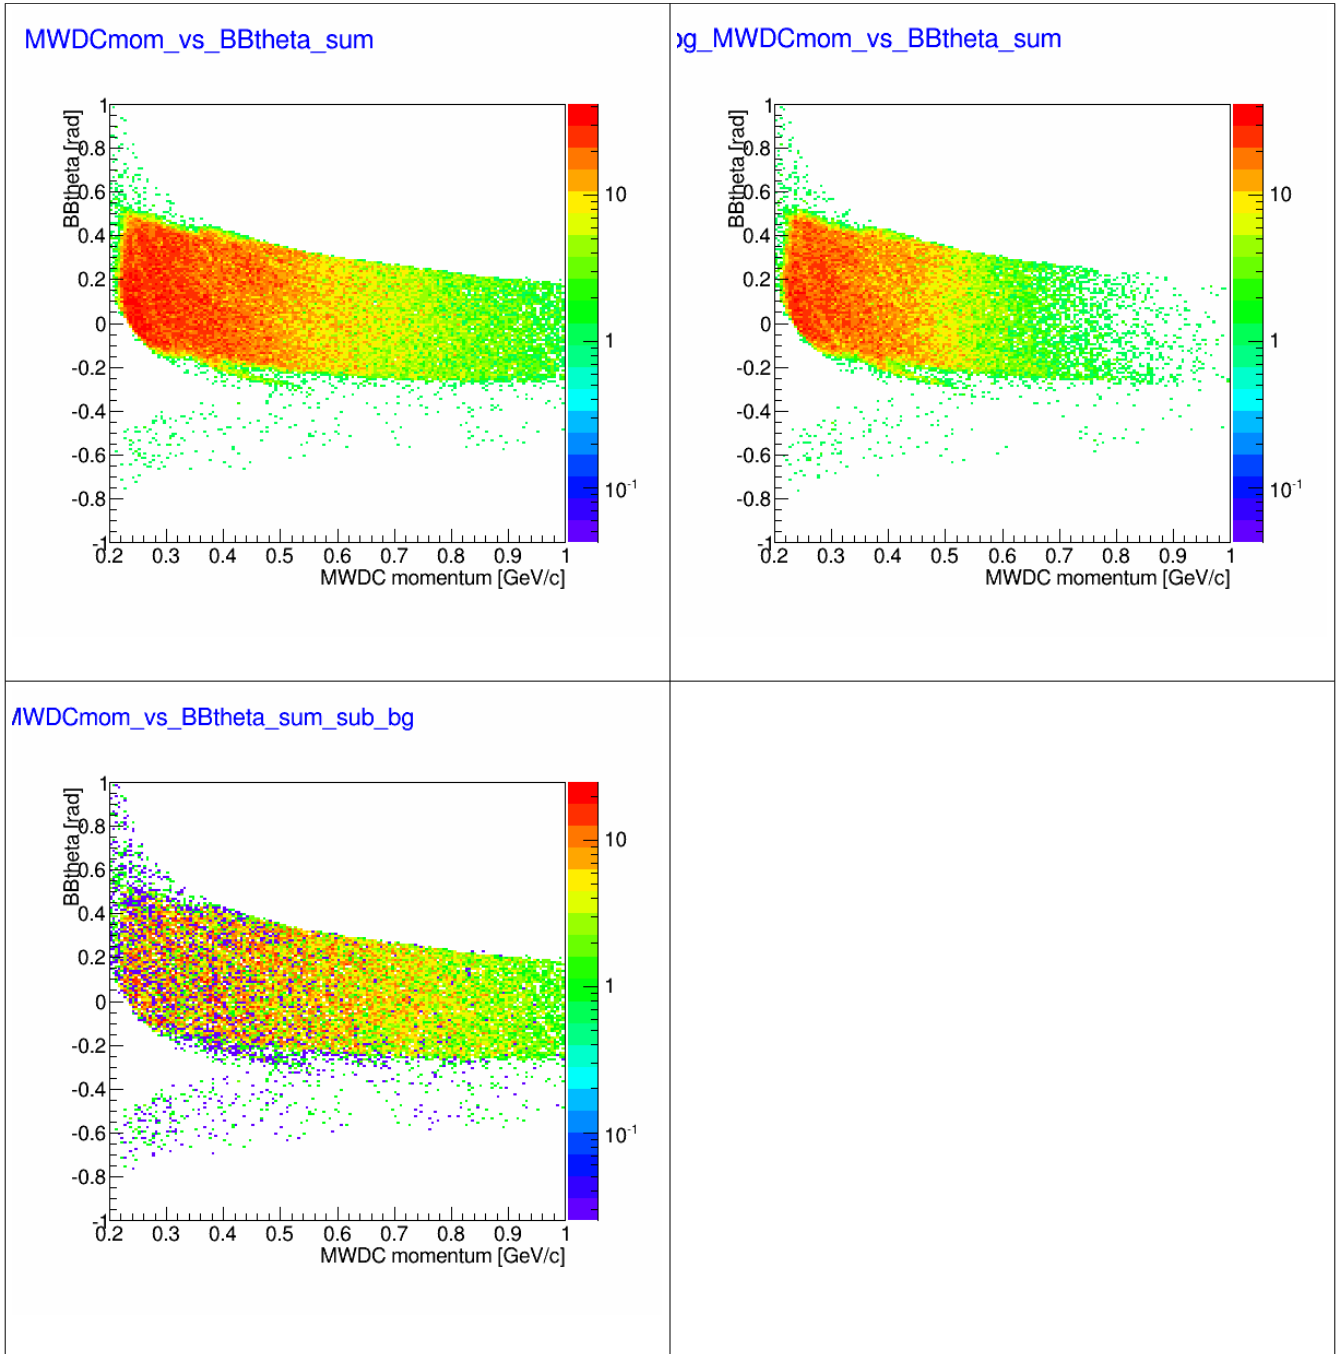

**\*\* check the dip of the background around 0.7 and peak ar about 0.3-0.4**

2D figures for variation of pairing to check possible cuts.

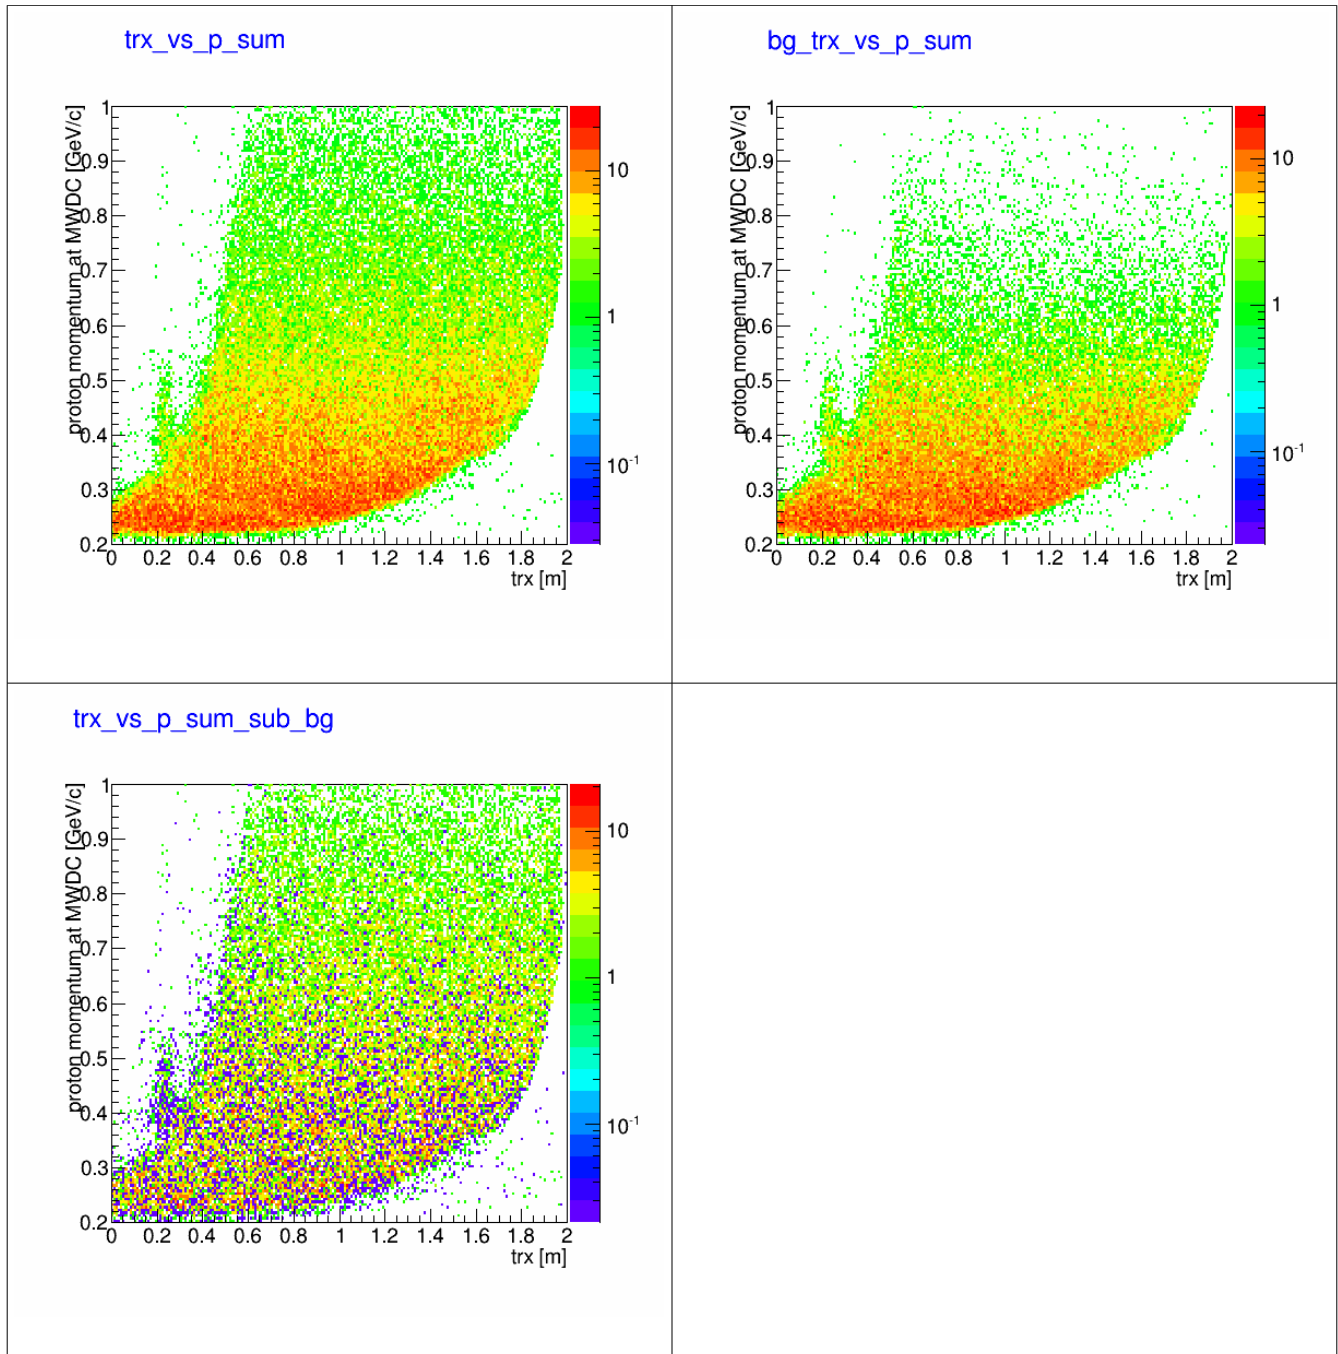

A24: E vs p

**A25: MWDC momentum vs tg\_theta to check the polarity**

**\*\* this need to be implement because it seem to have effect in the next page.**

**A26:  $trx$  vs MWDC mometum**

**\*\*problem at  $trx = 0.2$  maybe the bar problem.**
