- 9 calorimeter blocks previously used in the HERA experiments
  - Shashlyk type

- 2 different types of blocks
  - 4 blocks read by one PMT only
  - 5 blocks read by 4 PMTs each
  - Total channel count: 24

- Calorimeter blocks have been initially gain matched
  - coincidence signals from two scintillator paddles
  - placed on top and at the bottom of each calorimeter block

S11   S1
