

power light source Luxeon™ Emitter

Technical Datasheet DS25

Luxeon™ is a revolutionary, energy efficient and ultra compact new light source, combining the lifetime and reliability advantages of Light Emitting Diodes with the brightness of conventional lighting.

Luxeon Emitters give you total design freedom and unmatched brightness, creating a new world of light.

Luxeon Emitters can be purchased in reels for high volume assembly. For more information, consult your local Lumileds representative.

For high volume applications, custom Luxeon power light source designs are available upon request, to meet your specific needs.

Luxeon Emitter is available in white, green, blue, royal blue, cyan, red, red-orange and amber.

Features

- Highest Flux per LED family in the world
- Very long operating life (up to 100k hours)
- Available in White, Green, Blue, Royal Blue, Cyan, Red, Red-Orange and Amber
- Lambertian, Batwing or Side Emitting radiation pattern
- More Energy Efficient than Incandescent and most Halogen lamps
- Low voltage DC operated
- Cool beam, safe to the touch
- Instant light (less than 100 ns)
- Fully dimmable
- No UV
- Superior ESD protection

Typical Applications

- Reading lights (car, bus, aircraft)
- Portable (flashlight, bicycle)
- Mini-accent / Uplighters / Downlighters / Orientation lighting
- Fiber Optic Alternative / Decorative / Entertainment lighting
- Bollards / Security / Garden lighting
- Cove / Underself / Task lighting
- Traffic signaling / Beacons / Rail crossing and Wayside lighting
- Indoor and Outdoor Commercial and Residential Architectural lighting
- Automotive Exterior (Stop-Tail-Turn, CHMSL, Mirror Side Repeat)
- Edge-Lit Signs (Exit, Point Of Sale)
- LCD Backlights / Light Guides

Mechanical Dimensions

Batwing (Low Dome)

Notes:

1. The anode side of the device is denoted by a hole in the lead frame. Electrical insulation between the case and the board is required – slug of device is not electrically neutral. Do not electrically connect either the anode or cathode to the slug.
2. Drawings not to scale.
3. All dimensions are in millimeters.
4. All dimensions without tolerances are for reference only.

Lambertian (High Dome)

Notes:

1. The anode side of the device is denoted by a hole in the lead frame. Electrical insulation between the case and the board is required – slug of device is not electrically neutral. Do not electrically connect either the anode or cathode to the slug.
2. Drawings not to scale.
3. All dimensions are in millimeters.
4. All dimensions without tolerances are for reference only.

Mechanical Dimensions

Side Emitting

Notes:

1. The anode side of the device is denoted by a hole in the lead frame. Electrical insulation between the case and the board is required – slug of device is not electrically neutral. Do not electrically connect either the anode or cathode to the slug.
2. Caution must be used in handling this device to avoid damage to the lens surfaces that will reduce optical efficiency.
3. Drawings not to scale.
4. All dimensions are in millimeters.
5. All dimensions without tolerances are for reference only.

Flux Characteristics at 350mA, Junction Temperature, $T_J = 25^\circ\text{C}$

COLOR	LUXEON EMITTER	MINIMUM LUMINOUS FLUX (lm) OR RADIOMETRIC POWER (mW) $\Phi_V^{[1,2]}$	TYPICAL LUMINOUS FLUX (lm) OR RADIOMETRIC POWER (mW) $\Phi_V^{[2]}$	RADIATION PATTERN

ROYAL BLUE ^[4]	LXHL-DRO I	55 mW	90 mW	
RED	LXHL-DDO I	30.6	40	SIDE EMITTING
RED-ORANGE	LXHL-DHO I	39.8	50	
AMBER	LXHL-DLO I	23.5	32	

Notes:

1. Minimum luminous flux or radiometric power performance guaranteed within published operating conditions. Lumileds maintains a tolerance of $\pm 10\%$ on flux and power measurements.
2. Luxeon types with even higher luminous flux levels will become available in the future. Please consult your Lumileds Authorized Distributor or Lumileds sales representative for more information.
3. Minimum flux value for 470 nm devices. Due to the CIE eye response curve in the short blue wavelength range, the minimum luminous flux will vary over the Lumileds' blue color range. Luminous flux will vary from a minimum of 2.9 lm at 460 nm to a typical of 8 lm at 480 nm due to this effect. Although the luminous power efficiency is lower in the short blue wavelength range, radiometric power efficiency increases as wavelength decreases. For more information, consult the Luxeon Design Guide, available upon request.
4. Royal Blue product is binned by radiometric power and peak wavelength rather than photometric lumens and dominant wavelength.

Notes: (for both optical tables)

- Dominant wavelength is derived from the CIE 1931 Chromaticity diagram and represents the perceived color. Lumileds maintains a tolerance of ± 0.5nm for dominant wavelength measurements.
- Royal Blue product is binned by radiometric power and peak wavelength rather than photometric lumens and dominant wavelength. Lumileds maintains a tolerance of ± 2nm for peak wavelength measurements.
- CRI (Color Rendering Index) for White product types is 70. CCT ±5% tester tolerance.
- Spectral width at ½ of the peak intensity.
- Total angle at which 90% of total luminous flux is captured.
- θ½ is the off axis angle from lamp centerline where the luminous intensity is ½ of the peak value.
- Cumulative flux percent within ± 45° from optical axis.
- Off axis angle from lamp centerline where the luminous intensity reaches the peak value.
- All red, red-orange and amber products built with Aluminum Indium Gallium Phosphide (AlInGaP).
- All white, green, cyan, blue and royal blue products built with Indium Gallium Nitride (InGaN).
- Blue and Royal Blue power light sources represented here are IEC825 Class 2 for eye safety.

AMBER	2.31	2.95	3.51	2.4	-2.0	18		

Notes:

1. Lumileds maintains a tolerance of $\pm 0.06\text{V}$ on forward voltage measurements.
2. Dynamic resistance is the inverse of the slope in linear forward voltage model for LEDs. See Figures 3a and 3b.
3. Measured between $25^\circ\text{C} \leq T_J \leq 110^\circ\text{C}$ at $I_F = 350\text{mA}$.

Absolute Maximum Ratings

PARAMETER	WHITE/GREEN/CYAN/ BLUE/ROYAL BLUE	RED/AMBER/ RED-ORANGE
DC FORWARD CURRENT (mA) ^[1]	350	385
PEAK PULSED FORWARD CURRENT (mA)	500	550
AVERAGE FORWARD CURRENT (mA)	350	350
REVERSE VOLTAGE (V) ^[2]	> 5	> 5
LED JUNCTION TEMPERATURE ($^\circ\text{C}$)	120	120
STORAGE TEMPERATURE ($^\circ\text{C}$)	-40 to +120	-40 to +120
SOLDERING TEMPERATURE ($^\circ\text{C}$) ^[3]	260 FOR 5 SECONDS MAX	260 FOR 5 SECONDS MAX

Notes:

1. Proper current derating must be observed to maintain junction temperature below the maximum. For more information, consult the Luxeon Design Guide, available upon request.
2. Measured at $I_F = 100\mu\text{A}$. LEDs are not designed to be driven in reverse bias. All products are not sensitive to ESD damage ($\pm 16,000$ Volts by HBM condition).
3. Measured at leads, during lead soldering and slug attach, body temperature must not exceed 120°C . Luxeon emitters cannot be soldered by general IR or Vapor-phase reflow, nor by wave soldering. Lead soldering is limited to selective heating of the leads, such as by hot-bar reflow, fiber focussed IR, or hand soldering. The package back plane (slug) may not be attached by soldering, but rather with a thermally conductive adhesive. Electrical insulation between the slug and the board is required. Please consult Lumileds' Application Brief AB10 on Luxeon Emitter Assembly Information for further details on assembly methods.

Figure 11.
Reel dimensions and orientation.

Figure 12.
Tape dimensions.

Notes:

1. Luxeon emitters should be picked up by the body (not the lens) during placement. The inner diameter of the pick-up collet should be greater than or equal to 6.5 mm. Please consult Lumileds' Application Brief AB10 on Luxeon Emitter assembly information for further details on assembly methods.
2. Drawings not to scale.
3. All dimensions are in millimeters.
4. All dimensions without tolerances are for reference only.

About Luxeon

Luxeon is the new world of solid state lighting (LED) technology. Luxeon Power Light Source Solutions offer huge advantages over conventional lighting and huge advantages over other LED solutions. Luxeon enables partners to create and market products that, until now, were impossible to create. This means the opportunity to create products with a clear competitive advantage in the market. Products that are smaller, lighter, sleeker, cooler, and brighter. Products that are more fun to use, more efficient, and more environmentally conscious than ever before possible!

Company Information

Luxeon is developed, manufactured and marketed by Lumileds Lighting, LLC. Lumileds is a world-class supplier of Light Emitting Diodes (LEDs) producing billions of LEDs annually. Lumileds is a fully integrated supplier, producing core LED material in all three base colors (Red, Green, Blue) and White. Lumileds has R&D development centers in San Jose, California and Best, The Netherlands. Production capabilities in San Jose, California and Malaysia.

Lumileds is pioneering the high-flux LED technology and bridging the gap between solid state LED technology and the lighting world. Lumileds is absolutely dedicated to bringing the best and brightest LED technology to enable new applications and markets in the Lighting world.

©2002 Lumileds Lighting. All rights reserved. Lumileds Lighting is a joint venture between Agilent Technologies and Philips Lighting. Luxeon is a trademark of Lumileds Lighting, LLC. Product specifications are subject to change without notice.

Lumileds may make process or materials changes affecting the performance or other characteristics of Luxeon. These products supplied after such change will continue to meet published specifications, but may not be identical to products supplied as samples or under prior orders.
