

Model RS-A and RSS-A Open Loop Hall Effect

Description

The RS/RSS-A Series is a current sensor that accurately measures AC and DC currents and provides electrical isolation between the circuit being measured and the output of the sensor.

One package provides nominal current measurements from 100 to 1000 amps and has the versatility to be panel or bulkhead mounted.

Features

- High accuracy
- Wide frequency range
- Excellent linearity
- Safety isolation
- Heavy duty industrial housing
- Panel or bulkhead mounting
- Single or dual supply voltage option

Applications

- Motor controllers and drives
- Battery supplied equipment
- Switch mode and uninterruptable power supplies
- Welding equipment
