258991A PC Cable Tester Pro ATA

PC Cable Tester ATA PRO is an advanced version of the original PC Cable Tester, now supports a Serial ATA / High Speed Serialized AT Attachment. With this new addition, PC Cable Tester Pro ATA is now capable of testing almost any PC cable on the market.

PC Cable Tester is a stand-alone test device designed to provide the user with a wire map of standard PC data cables (USB and 1394 Firewire available on Pro version). The unique LED display clearly determines wiring status by providing a point-to-point pin-out of the actual wiring configuration. Quickly and simply diagnose the existence of open wires, shorted wires, crossed wires and miswiring. It is an essential tool for cable dealers, cable assembly houses or system integrators to quickly troubleshoot PC data cables-where most data transmission problems occur.

Features:

- Uses wire mapping display to test the most commonly used PC Data Cables (even USB and Firewire on Pro version) for actual pin configurations
- Detects open wires, shorts and miswiring
- LED glow enhanced for printer cable test
- Automatic or manual scanning
- Hand-held, light weight and totally portable
- DC battery compartment and AC power jack
