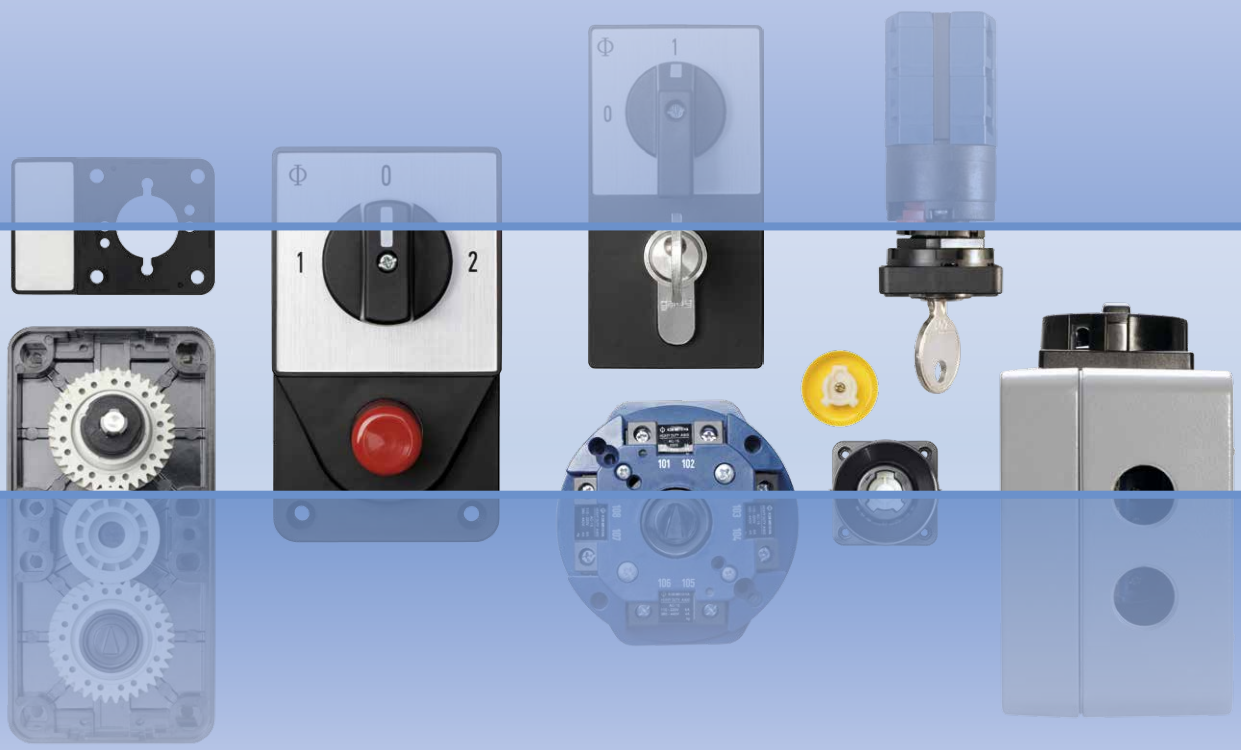
BLUE LINE switchgear

since 1907

Catalog 101
Optional Extras and Enclosures

07/2015



Kraus & Naimer

The development of the Blue Line rotary switch, contactor and motor starter product ranges is based on more than hundred years experience by Kraus & Naimer in the design and manufacture of electrical switchgear. Kraus & Naimer pioneered the introduction of the cam operated rotary switch and continues to be recognized as the world leader in that product field.

BLUE LINE

Blue Line products are protected by numerous patents throughout the industrial world. They are built to national and international standards and designed to withstand adverse temperatures and climates.

Blue Line products are accepted and universally recognized for their quality and workmanship. They are supported by a worldwide sales and service organization.

The Kraus & Naimer Registered Trademark

WORLDWIDE SYMBOL FOR QUALITY SWITCHGEAR

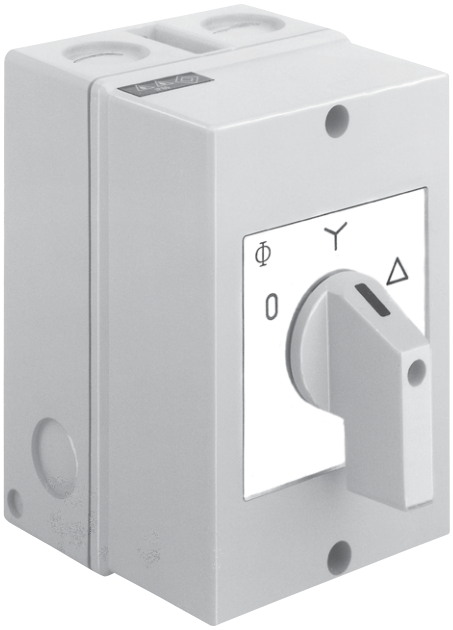
Disconnectors and Main Switches with Optional Extras acc. to IEC 60947-3 see Catalog 500

Contents

Construction Data

The large cam switch line of the A, C, CA, CAD, CG, CH, CHR, D, L and X-series is complemented by a large number of optional extras and enclosures.
This substantial number of optional extras and enclosures is needed in order to meet the requirements of the world market.

One or more optional extras may be used in combination with any one switch provided they are of the same switch size. A few exceptions where this cannot be accomplished are noted on the following tables. In some cases, for technical strength or esthetic reason, it may be desirable that a switch be combined with an optional feature of the next larger switch size. Many options provide for such a possibility.



Enclosures are manufactured from plastic or aluminum material. They offer a high degree of protection (up to IP 66/67) thereby permitting switch operation under adverse environmental conditions. The materials used provide considerable strength and the best possible protection against corrosion. A large number of possibilities exist for combining switches, enclosures and appropriate optional extras.

How to order

Disconnectors and Main Switches with Optional Extras acc. to IEC 60947-3 see Catalog 500

When ordering Blue Line cam switches with optional extras, the following method of coding is required. Details on the enclosures and optional extras are shown in this catalog.

1. Switch Type

See Catalog 100, 110, 120, 130 or DC-Switch G20/G20S.

2. Switch Function

See Catalog 100, 110, 120, 130 or DC-Switch G20/G20S.

3. Type of Mounting

See Catalog 100, 110, 120, 130 or DC-Switch G20/G20S.

4. Enclosures

The assigned code numbers for the various enclosures are shown in this catalog on pages 25-27.

CA20B **A202** **PN**
V840G/

5. Optional Extras

Pages 6-24 list optional extras and their coding. A ● indicates the switch sizes in which the optional extra shown is available.

Possible combinations of switches of the same switch size with an optional extra of the next larger switch size are indicated by a ●. Only in this case indicate the next larger switch size in front of the coding.

There are some optional extras in existence which are available in a variety of programs. Additional ordering data may, therefore, be required. In the above case, a color description is required for the cover and handle disc.

M700/.	●	●	●	●

Standard handle and standard face plate
Protection IP 65

The M700/M701 is a padlock door clutch and a mechanical interlocking safety device. Using the device the electrical panel may be opened only when the switch is in the OFF position and no padlock is fitted. Note: Only in the ON position can knowledgeable personnel using a simple tool to defeat the interlock. The M700's flexibility allows for successful installation with as much as + or - 5 mm of misalignment between the shaft and door.

Dimensions p. 28

Unlock insert for the M700 ff.
To open the door in ON-position. (After the locking has been made inactive, it is necessary to take effective precautions against an opening of the door by unauthorized persons.)

Code
S1D M700 29

Door clutches M800/M810.[1]

Door clutch utilizes a simple and robust design and features a compact size. It has an interlock in the ON-position while a padlock can be fitted in the OFF-position. The door clutch may be opened only if the switch is in the OFF-position. In special cases, however, authorized people have a requirement to open the door, even if the switch is in the ON-position. Further characteristics are the single hole mounting with IP 66/67 protection degree, as well as the Accepted Misalignment up to ± 3 mm horizontally and ± 5 mm vertically. Maximum 3 padlocks with a minimum shackle diameter from 5 up to 8 mm are possible.

Optional Extras	Code	For Switch Sizes S00	S0	S1	S2

Control and Indicator Device (without Lamp)

Dimensions p. 26

For 1 lamp with socket BA 9s
Max. power 2,8 W

The control and indicator device includes a single hole mounting 30 mm with locking nut and can be supplied with the following front end assemblies:
Front ring (alternatively with add-on face plate),
Face plate 48 x 48 mm (alternatively with add-on face plate) or face plate 64 x 64 mm.

The operation may be as follows:
- Turn to operate
- Push-to-turn operation
  (interlock as control and alarm switch)

This version is available with 1 or 2 auxiliary contacts. Select between a contact system with a rigid contact bridge for excellent AC-15 making and breaking capabilities.
Also available with gold contacts for use in aggressive environments. Or select a H-bridge design with “cross-wire“ gold-plated contact system for low voltages and currents.

Q110		●		
Q110/F		●		

Removal aid for control and indicator device — **S0E Q110 09**

Dimensions p. 26

For 6 lamps with socket T6,8
Length of lamp 42-44 mm
Max. power per lamp 2,5 W

According to the operating voltage the lamps have to be paralleled or connected in series. As front end assembly an alu-face plate 51,8 x 51,8 mm is supplied.

Q100/A — ● (S1)

Ordering data: For size S0 front end assembly, quantity and operation of the auxiliary contatcs and type of the contact system.

Control and Indicator Device with Light Conductor

Dimensions p. 26

The luminous source is a LED module with yellow light-emitting diode mounted at the end of the switch.
The transmission of light occurs via a light conductor.

Technical Data:

Voltage	Frequency	Power Consumption
24 V	AC 50 - 60 Hz, DC	0,2 W
48 - 60 V	AC 50 - 60 Hz	0,3 W
48 - 60 V	DC	1 W
110 - 120 V	AC 50 - 60 Hz	0,3 W
110 - 120 V	DC	1,4 W
220 - 240 V	AC 50 - 60 Hz	0,3 W
with test terminal:		
24 V	DC	0,2 W
48 - 60 V	DC	1 W
220 - 240 V	DC	1,4 W

Types of version
Without interlock (handle “turn to operate“)
With interlock (handle “push to turn“)
The control and indicator device is available for single hole mounting and mosaic.

Q100B — ● (S00)

Ordering data: Operating voltage and type of version.

Optional Extras	Code	For Switch Sizes S0	S1	S2	S3

Trip Indicator

	Code	S0	S1	S2	S3
With square face plate	**M120/A**	●	●		
With rectangular face plate	**M120/B**	●	●		

The trip indicator used on switches with spring return positions. It includes a colored indicator to show the last spring return position that handle has been turned.
Two possibilities for flag indicator exist:
a) left red - right green
b) left green - right red

Ordering data: The color to appear after left or right operation.

Auxiliary Contacts

Dimensions p. 27

These auxiliary contacts are controlled with a cam which can be programmed. The max. number of the auxiliary contacts for switches of size S1 and S2 is 4 pcs. and for switches of size S3 is 6 pcs.
Select between a contact system with a rigid bridge for excellent AC-15 making and breaking capabilities or a H-bridge design with “cross-wire“ contacts (sizes S1 and S2) for low voltages and currents. The contact systems with gold contacts or gold-plated contacts allow for use in aggressive environments also.
In cases where more than 4 resp. 6 auxiliary contacts are required, an auxiliary switch should be used alternatively.

	To push lateral latching	**V135**		●		
Ordering data:	Description of the interlocking program, number and operation of the auxiliary contacts.					

Stop and Go Device

Dimensions p. 29

	The stop and go device prevents a fast switching thru the center OFF position. This is only possible with a 60° switching angle. The stop and go device only becomes activated in the center switch position, in either in both or one direction.	**V160**	●			
Ordering data:	Operation of the stop and go device.					

Interlock between Switches

Dimensions p. 30

	For 2 switch columns	**V600/B**		●	●	●
	An interlock between 2 or 3 switch columns permits the operation of one switch only when the other switch or switches are located in a pre-determined switching position. For heavy duty service reinforced devices are available.					
	For 3 switch columns	**V600/C**		●	●	●
Ordering data:	Description of the interlocking program.					

Optional Extras	Code	For Switch Sizes S0	S1	S2	S3

Push Button Interlock

With square face plate

Switching only possible if push button is pressed.

Up to 4 auxiliary contacts can be operated by pressing the push button.

V400/A1 ● ●[1] ● ●

With rectangular face plate

Switching only possible if push button is pressed.

V400/B1 ● ●[1]

Dimensions p. 31

Ordering data: Number and operation of the auxiliary contacts.

Electromechanical Interlock[2]

For switches size S1

The electromechanical interlock locks the switch in any switching position. The interlock device is operated by energizing or de-energizing the electromechanical system. Adding auxiliary contacts to the switch permits the device to be operated only in pre-determined positions.

The optional extra S1 V140/2 can be equipped with a positive breaking auxiliary contact according to IEC 60947-5-1

24 V - 600 V 50 Hz/60 Hz
11 W Power Consumption

V140 ●

For switches size S2 and S3 or for switches size S1 with DC solenoid

V140 ● ● ●

Magnet
available Voltage:
24 V - 240 V 50 Hz/60 Hz /DC
20 W Power Consumption

Optional Extras	Code	For Switch Sizes S0	S1	S2	S3

Spring Return over several Positions

Dimensions p. 29

Spring return from both sides — **M470/A** — ●● | ● | ● |

Spring return from one side — **M470** — ●● | ● |

Spring return for angular displacement up to 30° can be accomplished by using the latching mechanism only. If a large number of contacts must be opened simultaneously or a total angular displacement is larger than 30° over which the spring return is operational, the switch must use one of the spring return devices.
Spring return from both sides can be designed to permit maintained position on each side of center.

Ordering data: For M470, specify spring return from either left or right side and details of maintained positions, if required.

Uni-directional Interlock

The uni-directional interlock prevents the switch from being operated counterclockwise. The interlock may be in either all positions or in pre-determined positions only.

M400 | ● | ● | ● | ●

Ordering data: Specify which positions should be interlocked.

Slip Clutch and Ratchet Coupling

Dimensions p. 32

Slip clutch — **M200** — ● | ● |

Using the slip clutch, two cam shafts can be coupled in such a way so that the secondary cam shaft will operate only after the primary cam shaft has been moved over a pre-determined angle. This slip clutch allows e. g. the de-energized changing back of switches for pole-changeable motors. Not available for D-switches.

Ratchet coupling — **M230** — CA40 CA50 CA63 C26 C32

A ratchet coupling attaches to the rear of the switch. Additional stages are then attached behind the coupling device which serves to operate that portion of the switch only when the handle is turned counterclockwise. When the handle is turned clockwise, the rear switch portion remains in the same position.

< back to table of contents >

Optional Extras	Code	For Switch Sizes S0	S1	S2	S3

Electromechanical Trip Device (Undervoltage Release)[1]

Dimensions p. 32

	Code	S0	S1	S2	S3
Operating voltage and frequency:					
AC/50 Hz	**V350/A**		●		
AC/60 Hz	**V350/B**		●		
AC/50/60 Hz	**V350/C**		●		
DC	**V350/D**		●		

The device includes a magnetic system which releases the switch to the trip position at voltage failure or undervoltage of 70 % of the nominal voltage. The device is trip-free, in that the switch can be operated only when the primary voltage is available. When using DC voltage, an economy resistor must be provided.
Switches with integrated undervoltage release are described on page 23.

Ordering data: Operating voltage and frequency for the magnetic system.

Electromechanical Trip Device (Shunt-trip)[1]

Dimensions p. 32

The device permits the switch to be turned to the trip position by remote control. The coil is designed for short-time duty requiring an auxiliary contact in the switch which de-energizes the coil in the trip position.

Controlling of the magnetic system:
24 V-440 V/50 Hz, 60 Hz or DC

	Code	S0	S1	S2	S3
	V360/A		●		

Ordering data: Operating voltage for the magnetic system.

Motor Drive[1]

Dimensions p. 33

The motor drive consists of an AC motor with condenser, gear train and Geneva gear. This device allows switches to be operated from a remote location. Motor voltages available are 230 V, 50 Hz and 117 V, 60 Hz. A technical data sheet pertaining to the possible control systems is available upon request.

	Code	S0	S1	S2	S3
	R300		●	●	●

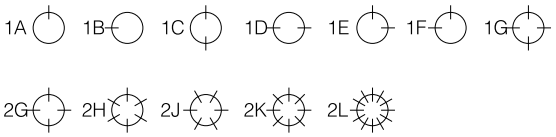
Locking program in which the key can be removed:



Ordering data: Locking program of the key.

Key-lock Device with Profile Cylinder

Dimensions p. 35

The key-lock device V750E with profile cylinder is furnished with a single hole mounting 22 mm for switches in size S0. The key can be removed in one switch position or for switches with 60° switching angle in up to six switch positions. The device with profile cylinder can be supplied with standard lock cylinders manufactured by CES, BKS or IKON.

Various key positions and locking programs are available.
Key positions:
Key can be removed in locked and unlocked positions.
Key can be removed only in locked positions.
Locking programs:

Locking Program No.	Switching Angle	Switch Positions		Size
		To be locked	Not to be locked	
1	30°-90°	one	the balance	S0-S3
2	20°	all	none	S1, S3
	30°-90°			S0-S3
3	30°-90°	the balance	one	S1-S3
4[1]	30°-90°	one[1]	the balance[1]	S0-S3

[1]Locking program 4 permits the locking of the device in any switch position. However, the actual locking becomes effective in a pre-determined switch position only.

Ordering data: Advise locking program and positions in which the key can be removed.

Switch Type Variations	Suffix Code	For Switch Sizes S0	S1	S2	S3

PFR (Power Failure Release)[1]

Dimensions p. 38

Size S0

The magnetic system includes a low hum DC coil with incapsulated diode rectifier (blocking voltage 1000 V) = it, therefore, works independent of frequency. PFR switches are available with 24 V-600 V coils.
Available switching detents: 1 x 60° (60° to the right of center OFF), 2 x 60° (60° to the right and left of center OFF).

X | CA.. CG8 CH..

Alternatively with trip-free release
(Switching angle 1 x 60°)

Y | CA.. CG8

Dimensions p. 38

The PFR switch series is designed to provide protection for both machines and machine operators by preventing the equipment (which has been operating) from restarting automatically after a power failure.
The device includes a magnetic system which releases the switch (by means of a linear spring return mechanism) to the trip position at voltage failure or undervoltage of 70 % of the nominal voltage.

Size S1

Operating voltage for the magnetic system:
24 V-500 V/50 Hz
24 V-600 V/60 Hz

(Switching angle 1 x 60°)

X | A11 A25 CA40 CA50 CA63 C26 C32 C42

Ordering data: Operating voltage for size S0 as well operating voltage and frequency for size S1 for the magnetic system.

Lockout-relay[1]

Dimensions p. 39

With manual release

M | CA10 CG8 CH.. | A11 A25 CA40 CA50 CA63 C26 C32 C42

The lockout-relay is typically used to remotely switch electrical circuits from one power source to another.

The device contains a totally incapsulated coil and linear spring return mechanism which is compressed by manually turning the handle to the ON position (60° to the right of OFF). Once in the ON position, the handle is mechanically locked in place and cannot be manually turned back to OFF. When the coil is energized, however, the unit will automatically spring return to the OFF position.

A second version is available with push button manual release for test purposes.

Technical Data:

Voltage	Frequency	Power Consumption
24 - 28 V	AC 50 - 60 Hz, DC	135 VA
32 - 40 V	AC 50 - 60 Hz, DC	145 VA
42- 50 V	AC 50 - 60 Hz, DC	155 VA
60 V	AC 50 - 60 Hz, DC	165 VA
110 - 125 V	AC 50 - 60 Hz, DC	185 VA
220 - 240 V	AC 50 - 60 Hz, DC	220 VA
380 - 440 V	AC 50 - 60 Hz, DC	240 VA

Dimensions p. 39

Without manual release

L

Ordering data: Operating voltage and frequency for the magnetic system.

Enclosures	Code	For Switch Sizes			
		S00	S0	S1	S2

Plastic Enclosures

Enclosure series protection IP 66/67, made of strong durable plastic, increased wiring space and cover coupling

KS and KL series
With high UV-resistance, Flammability Standard: UL94 V-0

CS and CL series
For applications in an aggressive environment, such as oil, chemical substances and grease

Each enclosure has 2 knock-outs on top and bottom for metric thread according to EN 50262. Standard equipment includes both a ground and neutral terminal. Size S0 enclosures are also available with lateral conduit knock-out and a cover interlock which allows for opening without dismantling the handle. They can also be supplied with a cover locked in 1 position. These enclosures are also available for conduit entries for PG-thread.

The following switch types can be mounted:

Switch type	Max. no. of stages

Notes:

The Range of “Blue Line” Switchgear

Technical literature covering the following products is available on request.

	Catalog Number
Main Switches and Main Switches with Emergency Function 16 A-315 A **Maintenance Switches 20 A-315 A** **Switch Disconnectors 20 A-315 A** According to IEC 60947-3, EN 60947-3, VDE 0660 part 107, IEC 60204, EN 60204 and VDE 0113	**500**
C, CA and CAD Switches 10 A-315 A and L Switches 350 A-2400 A C, CA and CAD switches are designed for universal application. They are recommended for instrument, isolator, double-throw and motor control. L switches are designed for load and off-load applications. They are used to switch resistive or low inductive loads.	**100**
Optional Extras and Enclosures The complete product line, a large number of optional extras is available, including door interlocks, push-pull devices, cylinder and padlock attachments, control and indicator devices, AC motor drives, as well as enclosures, both insulated and metal.	**101**
A and AD Switches 6 A-25 A A and AD switches have 4 contacts in each switching stage. These switches provide an extensive range of switch functions and require a minimum mounting depth. Up to 24 switching positions are possible, with availability of 48 contacts per 12 stage switch column.	**110**
CG, CH and CHR Switches 10 A-25 A Ultra compact CG, CH and CHR switches are ideally suited for control and instrumentation applications. Switch terminals are “finger-proof” and conveniently accessible for wiring and are delivered open. All CG4 switches offer specially designed gold plated contacts or H-bridges with “cross-wire” contact systems, which facilitates their use in electronic circuitry and chemically aggressive environments.	**120**
DH, DHR, DK and DKR Switches 6 A-16 A DH, DHR, DK and DKR switches incorporate unique corrosion resistant contacts that permit operation on system voltage as low as 1 V. They have fully enclosed and protected contacts which can be operated either by rotary and/or lateral handle movement. D switches are used in calibration and semiconductor circuits. They are also used for relay and contactor control.	**130**
X Switches 200 A-630 A X switches can be applied for load, tap and gang switching duties. They incorporate 6 contacts in each switching stage. Their compact design provides a minimum length dimension for mounting purposes.	**140**
KG Switches 20 A-315 A and KH and KHR Switches 16 A-80 A KG, KH and KHR switches are excellent circuit interruptors. They have high through fault and fault making capacities and are especially designed for use as isolators and safety switches for machine tools, distribution panels and switchboards. KG ON/OFF switches offer unusually high dimensioned air and creepage distances between terminals which are designed for time saving “straight-line” wiring. ON/OFF switches are available with up to 8 poles and double-throw switches are available with up to 4 poles.	**150**
Push Buttons and Pilot Lights, 22,5 mm Ø A complete range of state-of-the-art push buttons and pilot lights represent an ideal combination of functional security and economical efficiency in a modular design.	**302**
