- **Ideal ventilation for pets**
- **NOT recommended as a cover for high-powered ventilator fans - Use our FAN/MATE® shown below**
- **Three year limited warranty**

Your #1 Choice for RV Ventilation

INSTALLATION INSTRUCTIONS

MaxxAir Vent Cover

1. Place the MaxxAir over the roof vent with the louver area facing the rear of the vehicle. Center the MaxxAir over the roof vent. Trace the location of the slots in the MaxxAir mounting flange to the roof surface.

2. Position a mounting bracket on your roof so that the slot in the bracket intersects one of the locations traced on the roof. For maximum strength place the mounting brackets as close as possible to the outside corner of your existing roof vent frame.

3. Mark the location of the screw hole in the bracket onto your roof vent frame. Drill through the roof vent frame using a 3/16" dia. drill bit. Place one of the carriage bolts upward through the slot in the bracket and fasten the bracket to the roof vent wall using the small screw provided. The small hole washer, lock washer and hex nut should be placed on the inside of the roof vent frame wall. Install two brackets on each side of your roof vent as shown in the drawing.

4. Place the MaxxAir on the four upward pointing carriage bolts and fasten using the large hole washers and hex nuts provided. You may have to push the head of the carriage bolt up into the bracket slot to prevent the carriage bolt from turning during tightening of the nuts.

5. A slight air gap between the MaxxAir base and the roof after installation is normal and permits condensation to escape.

We suggest that you remove, clean with mild soapy water and inspect your MaxxAir Vent Cover annually. Verify that there is no damage and that the mounting brackets are properly tightened to the existing roof vent.

BRACKETS — **EXISTING VENT** — **CARRIAGE BOLTS**
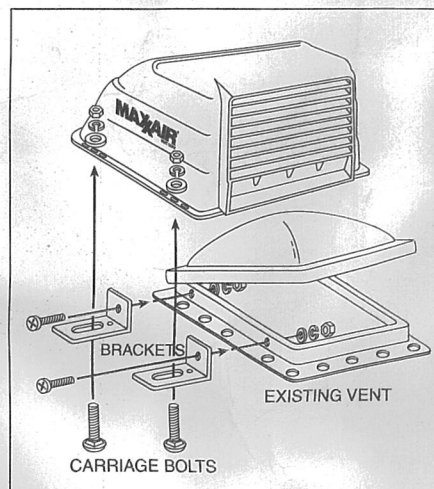

Contents of Kit • Stainless Steel & Aluminum

4 - 1/4-20 washers	4 - 8/32 nuts
