To Order Model CN77000 SERIES CONTROLLER *(Specify Model Number)*

PROCESS CONTROLLER, DUAL DISPLAY FOR THERMOCOUPLE, RTD, VOLTAGE OR CURRENT INPUTS IN A 1/16 DIN CASE

Model No.	Description
CN77	Dual displays for simultaneous display of measured value and setpoint. Selectable preset tune, adaptive tune, autotune, PID, PI, PD control modes. The dual control outputs can be configured for a variety of control and alarm applications such as heat, heat/cool, heat/alarm, cool or cool/alarm. The ramp to setpoint feature allows the user to define the rate of rise to setpoint, minimizing thermal shock to the load during start-up. Maximum ramp time 99.59 (HH.MM), Soak: 00.00 to 99.59 (HH.MM),Damping: 1 to 8 in unit steps. Input types J,K,T,E,R,S,B,N,J-DIN°C, RTD 100Ω 0.00385, 100Ω & 1kΩ 0.00392, 0 to 20 mA, 4 to 20 mA, 0 to 100mV, 0 to 1V, 0 to 10Vdc. Alarm 1 output includes SPST relay, 3A @ 120Vac, 3A @ 240Vac.

NOTE: The Controller must be ordered completely configured. Options are not field installable.

[ ]	CASE TYPE
R3	NEMA 1, 1.89 x1.89" (48 x 48mm) bezel and 1.75" ROUND cutout
R5	NEMA 1, 2.1 x 2.1" bezel and 1.75" ROUND cutout
3	NEMA 12 bezel for 1/16 DIN panel cutout 45mm x 45mm (1.772 x 1.772")
5	NEMA 4 bezel for 1/16 DIN panel cutout 45mm x 45mm (1.772 x 1.772")

[ ]	CONTROL OUTPUT #1 (Direct or Reverse Acting)
2	Solid State Relay SSR : 1A @ 120/240Vac continuous
3	Relay: Form "C" 5A @ 120Vac, 3A @ 240Vac
4	Pulsed 10Vdc @20mA (for use with external SSR)
5	Non-Isolated 1 to 10Vdc or 0-20mA @500Ω max

[ ]	CONTROL OUTPUT #2 (Direct or Reverse Acting)
0	Insert "0" if second output is not desired
2	Solid State Relay SSR: 1A @ 120/240Vac continuous
3	Relay: Form "C" 5A @ 120Vac, 3A @ 240Vac
4	Pulsed 10Vdc @20mA (use for external SSR)

Model No.	Description *cont*.
[ ]	OPTIONAL OUTPUTS
*	none (no entry required)
-A2	SPST relay, 3A@ 120Vac, 3A @ 240Vac (Alarm 2)
-C2	Isolated RS232, 300 to 19.2k baud
-C4	Isolated RS485, 300 to 19.2k baud
-PV	Isolated Analog Output
-RSP	Remote Setpoint Selection

[ ]	POWER SUPPLY
*	90 to 240 Vac/dc, 50 to 400Hz (no entry required)

<u>NEMA 1/UL Type 1</u>: Intended for indoor use, to provide a degree of protection against contact with the enclosed equipment and against limited amount of falling dirt.

<u>NEMA 4/UL Type 4</u>: Intended for indoor use, to provide a degree of protection against splashing water, windblown dust and rain, and hose directed water and undamaged by the formulation of ice on the enclosure. *Testing-Hosedown:* Enclosure is subjected to a stream of water from a hose which has a 1" diameter nozzle and which delivers at least 65 gallons per minute from a distance of 10 to 12 feet for a minimum of 5 minutes.

<u>NEMA 12/UL Type 12</u>: Intended for indoor use, to provide a degree of protection against circulating dust, falling dirt, and dripping non-corrosive liquids. *Testing-Drip:* Enclosure is subjected to a drip pan which produces both splashing and dripping. *Testing-Atomized Water:* Enclosure is subjected to a spray of atomized water by using a nozzle that produces a 3" round diameter spray, 12" from enclosure. The air pressure is at 30psi.

For harsh environments, we recommend installation of the controller for square panel cutouts.

Ordering Examples:
1.) CN77R322-C2 is a NEMA 1 bezel case with 1.75 inch round hole mounting adaptor, dual SSR control outputs and RS232 communications output.
2.) CN77330 is a NEMA 12 bezel case with 1/16 DIN mounting and single Relay control output**.**
3.) CN77544-A2 is a NEMA 4 bezel case with 1/16 DIN mounting, dual pulse control outputs, and a SPST 3A Alarm relay**.**

1.1 Safety Considerations

⚠ This device is marked with the international caution symbol. It is important to read this manual before installing or commissioning this device as it contains important information relating to Safety and EMC (Electromagnetic Compatibility).

This instrument is a panel mount device protected in accordance with Class I of EN 61010 (115/230 AC power connections). Installation of this instrument should be done by qualified personnel. In order to ensure safe operation, the following instructions should be followed.

⚠ This instrument has no power-on switch. An external switch or circuit-breaker shall be included in the building installation as a disconnecting device. It shall be marked to indicate this function, and it shall be in close proximity to the equipment within easy reach of the operator. The switch or circuit-breaker shall meet the relevant requirements of IEC 947–1 and IEC 947-3 (International Electrotechnical Commission). The switch shall not be incorporated in the main supply cord.

⚠ Furthermore, to provide protection against excessive energy being drawn from the main supply in case of a fault in the equipment, an overcurrent protection device shall be installed.

- Do not exceed voltage rating on the label located on the top of the instrument housing.
- Always disconnect power before changing signal and power connections.
- Do not use this instrument on a work bench without its case for safety reasons.
- Do not operate this instrument in flammable or explosive atmospheres.
- Do not expose this instrument to rain or moisture.
- Unit mounting should allow for adequate ventilation to ensure instrument does not exceed operating temperature rating.
- Use electrical wires with adequate size to handle mechanical strain and power requirements. Install without exposing bare wire outside the connector to minimize electrical shock hazards.

EMC Considerations

- Whenever EMC is an issue, always use shielded cables.
- Never run signal and power wires in the same conduit.
- Use signal wire connections with twisted-pair cables.
- Install Ferrite Bead(s) on signal wires close to the instrument if EMC problems persist.

Failure to follow all instructions and warnings may result in injury!

1.2 Before You Begin

Customer Service

If you need assistance, please contact the nearest Customer Service Department, listed in this manual.

Inspecting Your Shipment

Remove the packing slip and verify that you have received everything listed.

Inspect the container and equipment for signs of damage as soon as you receive the shipment. Note any evidence of rough handling in transit. Immediately report any damage to the shipping agent. The carrier will not honor damage claims unless all shipping material is saved for inspection. After examining and removing the contents, save the packing material and carton in the event reshipment is necessary.

Manuals, Software:

The latest Operation and Communication Manual as well as free configuration software are available from **the website listed in this manual or on the CD-ROM enclosed with your shipment**.

Tip ☞ For first-time users: Refer to the QuickStart Manual for basic operation and set-up instructions.

If you have the Serial Communications Option you can easily configure the controller on your computer or on-line.

TO DISABLE OUTPUTS

Standby mode is useful during setup of the controller or when maintenance of the system is necessary. When the controller is in standby, it remains in the ready condition but all outputs are disabled. This allows the system to remain powered and ready to go.

When the controller is in "RUN" Mode, **push ENTER twice to disable all outputs and alarms**.

It is now in "STANDBY" Mode. Push ENTER once more to resume "RUN" Mode.
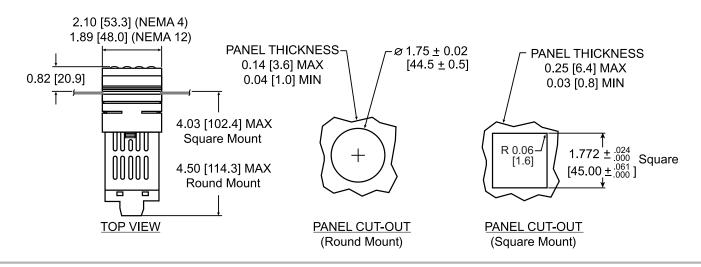

Tip ☞ **PUSH ENTER TWICE** to disable the system during an **EMERGENCY**.

2.1 Mounting the Controller

Note ☞ If necessary, the rear connector assembly may be removed from the main case for wiring (see Figure 2.1a for Square Mount, Figure 2.1b for Round Mount).

Figure 2.1a — Mounting the Square Mount Controller

Round Mount Micro Controller Mounting Instructions

1. Separate the display from the meter by squeezing the case (where shown) and then unplugging the cable from the meter.

2. Slide the retainer over the rear of the case, but do not engage serrations on case.

3. Pass the cable (from the display) thru a 1 $3/4$" diameter hole in the mounting panel and connect to the meter (take care to center the connector on the mating pins). While squeezing the case, press the display and meter squarely together until they connect.

4. Check the display and gasket for proper alignment, then slide the retainer tight against the backside of the mounting panel.

2.4. Mechanical Installation

Dip Switch Configuration

The settings of the DIP switch must be verified or set to comply with your selection at the Input/Type menu (see Section 3.0 for Input/Type). The DIP switch is accessible through an opening on the side of the case <u>or</u> may be accessed by removing the controller from the case, see Section 2.1 for instructions. Locate the dip switch (see Figure 2.4) and set the switches according to the following tables.

SETUP

For SSR wiring hook-up examples, refer to Specification Section.
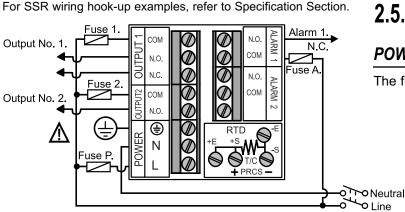

Figure 2.5.1 Power Wiring Hookup

The Safety European Standard EN61010-1 for measurement, control, and laboratory equipment requires that fuses must be specified based on IEC127. This standard specifies for a Time-lag fuse, the letter code "T". The above recommended fuses are of the type IEC127-2-sheet III. Be aware that there are significant differences between the requirements listed in the UL 248-14/CSA 248.14 and the IEC 127 fuse standards. As a result, no single fuse can carry all approval listings. A 1.0 Amp IEC fuse is approximately equivalent to a 1.4 Amp UL/CSA fuse. It is advised to consult the manufacturer's data sheets for a cross-reference.

2.5. Electrical Installation

POWER CONNECTION EXAMPLES

The figure below shows the power wiring hookup.

⚠ **Use copper conductors only for power connections**
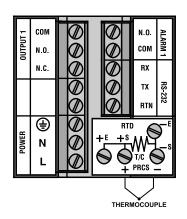

⚠ **The Protective Conductor terminal must be connected for safety reasons.**

Fuse	Connector	Output Type	115 Vac	230 Vac
Fuse 1	Output 1	Relay	5 A(T)	3 A(T)
Fuse 2	Output 1	Relay	5 A(T)	3 A(T)
		SSR	0.5 A(T)	0.5 A(T)
Fuse P	Power	N/A	100 mA(T)	100 mA(T)
Fuse A	Alarm 1/2	Relay	3 A(T)	3 A(T)

Note: Values shown are minimum recommendations for the protection of the controller. For a specific load, consult the respected electrical specifications to select a suitable fuse.

INPUT CONNECTION EXAMPLES

2.5.1. Thermocouple

The figure below shows the wiring hookup for any thermocouple type. For example, for Type K hookup, connect the yellow wire to the + (+S) Terminal and the red wire to the – (–S) Terminal. **When configuring your controller, select Thermocouple and Thermocouple type in the Input Type menu (see part 3).**

Figure 2.5.2 Thermocouple Wiring Hookup

TYPE	Input Connector		Jacket (external insulation)	
	Terminal 1 (-)	Terminal 2 (+)	Extension	Grade
J	Red	White	dark-Brown	Black
K	Red	Yellow	dark-Brown	Yellow
T	Red	Blue	dark-Brown	Blue
E	Red	Purple	dark-Brown	Purple
N	Red	Brown	dark-Brown	Brown
R	Red	Black	-	Green
S	Red	Black	-	Green
B	Red	Black	-	Black

2.5.2. Two/Three/Four-Wire RTD
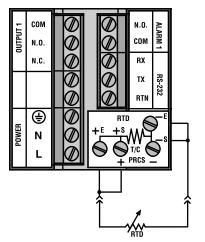

The figures below show the input connections and input connector jumpers required to hookup a 2, 3 or 4-wire RTD.

The **two-wire** connection is the simplest method, but does not compensate for lead-wire temperature change and often requires calibration to cancel lead-wire resistance offset.

Figure 2.5.3
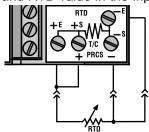

The **three-wire** connection works best with RTD leads closely equal in resistance. The controller measures the RTD, plus upper and lower lead drop voltage and then subtracts twice the measured drop in the lower supply current lead producing excellent lead-resistance cancellation for balanced measurements.

The **four-wire** RTD hookup is applicable to unbalanced lead resistance and enables the controller to measure and subtract the lead voltage which produces the best lead-resistance cancellation.When configuring your controller, select RTD type and RTD value in the Input Type Menu (see part 3).
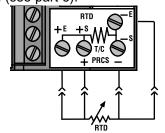

Two-Wire RTD Hookup
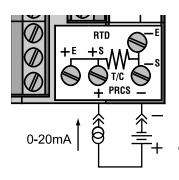

Three-Wire RTD Hookup

Four-Wire RTD Hookup

2.5.3. Process Current
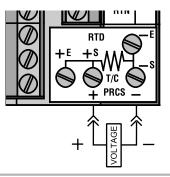

The figure shows the wiring hookup for Process Current 0 - 20 mA.
When configuring your controller, select Process type in the Input Type menu (see part 3).

Figure 2.5.4 Process Current Wiring Hookup

2.5.4. Process Voltage

The figure shows the wiring hookup for Process Voltage 0 - .1 V, 0 - 1 V, or 0 -10 V.
When configuring your controller, select Process type in the Input Type menu (see part 3).

Figure 2.5.5 Process Voltage Wiring Hookup

3.1 Introduction

The Controller has two different modes of operation. The first, *Run Mode*, is used to display values for the process variable, setpoint value and to display or clear peak and valley values. The other mode, *Menu Configuration Mode*, is used to navigate through the menu options and configure the controller.

Part 3 of this manual will explain the *Menu Configuration Mode*. **For your controller to operate properly, the user must first "program" or configure the menu options in the *Menu Configuration Mode*.**

Turning Your Controller On for the First Time

The Controller becomes active as soon as it is connected to a power source. It has no On or Off button. The Controller will at first flash reset on the PV and software version number on the SV display, and then proceed to the *Run Mode*.

Button	Function in Configuration Mode
MENU	To enter the Configuration Mode, the user must first press MENU. Use this button to advance/navigate to the next setting. The first menu to appear will be "ID Code", if enabled. The user can navigate through all the top level menus by pressing MENU. Selecting an ID of 0000 will allow you to bypass the ID Menu using the MENU button.
▲/MAX	Press this button to scroll through "flashing" selections. When a numerical value is flashing, this button will increase the active digit from "0" to "9". After "9" the display starts at "0" again. The most significant digit may also show a "–" sign. In the Run Mode MAX causes the display to flash the PEAK - press again to return to the PV value.
▶/MIN	Press this button to go back to a previous Top Level Menu item. Press this button twice to reset the controller to the *Run Mode*. When a numerical value is flashing, this button will scroll through the digits from left to right digit allowing the user to select the desired digit to modify. In the Run Mode, MIN causes the display to flash the VALLEY - press again to return to the PV value.
ENTER	Press this button to access the submenus from a Top Level Menu item. Also, press this button to store a submenu selection or after entering a value — the display will flash a "stored" message to confirm your selection. To reset flashing PEAK or VALLEY press ENTER. In the Run Mode, press ENTER twice to enable Standby Mode with flashing "**5 Export**".
NOTE:	Except for Setpoints and the Alarms, modifying any settings of the menu configuration will reset the controller prior to resuming Run Mode.

OPERATION: CONFIGURATION MODE

3.2 Menu Configuration: *Modifying set points will not reset the controller*
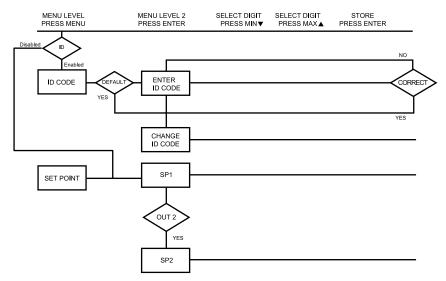

Figure 3.1 Flowchart for ID and Set Point Menus

ID Number (if enabled)

Note ☞ *It is recommended that you put the controller in the Standby Mode for any configuration change other than setpoints & alarms*

Display	Action	Response

SEE ID OPTION SUBMENU IN THE BREAK LOOP ALARM SECTION FOR ENABLE/DISABLE ID OPTION

Id COdE

ENTERING OR CHANGING YOUR (NON-DEFAULT) ID NUMBER

Press MENU   1)   Press MENU, if necessary, until " **Id COdE**" prompt appears.

Press ENTER   2)   Display advances to " **Id Cd**", if non-default ID code. If default ID code, the menu will advance to **CH Id** with default value i.e. 0000.

Id.Cd
- - - -

Note ☞ *If the ID code is the default value i.e. 0000, press MENU again and the menu will skip the ID code to Set Point Menu.*

Press MAX & MIN   3)   Press MAX to increase digit 0-9. Press MIN to activate next digit (flashing). Continue to use MAX and MIN to enter your 4-digit ID code.

Press ENTER   4)   If the correct ID code is entered, the menu will display **CH Id**, otherwise an error message will be displayed and the controller will return to the Run Mode.

CH.Id
1234

Press MENU   5)   To leave your ID code **Unchanged**, press MENU and advance to "**SEt Pont**" Menu.

or

Press MAX & MIN   To **Change** your ID code use the MAX and MIN buttons to enter a new ID code.

Strd
1234

Press ENTER   6)   Display flashes "**Strd**" message and advances to the next menu "**SEt Pont**".

Note ☞ To prevent unauthorized tampering with the setup parameters, the controller provides protection by requiring the user to enter the ID code before allowing access to subsequent menus. If the ID code entered does not match the ID code stored, the controller responds with an error message and access to subsequent menus will be denied.

Tip ☞ Use numbers that are easy for you to remember. If the ID code is forgotten or lost, call customer service with your serial number to reset the default to "0000".

Set Points (if ID Number Enabled)

Display	Action	Response
SEt **Pt**	Press MENU Press ENTER	**SETPOINT 1** 1) Press MENU, if necessary, until **"SEt Pt"** prompt appears. 2) Display advances to **"SP1"**, Setpoint 1.
SP1 **100.5**	Press MAX Press MIN	**DISPLAY SHOWS PREVIOUS VALUE. 1ST DIGIT FLASHING.** 4) Press MAX to increase digit 0-9. 5) Press MIN to activate next digit (flashing). 6) Continue to use MAX and MIN to enter your 4-digit Setpoint 1 value.
Strd **100.5**	Press ENTER	7) Display flashes **"Strd"** message only if a change is made, otherwise press MENU to advance to **"SP2"**, Setpoint 2.
SP2 **210.5**	Press MAX & MIN	**SETPOINT 2 : DISPLAY SHOWS PREVIOUS VALUE. 1ST DIGIT FLASHING.** 9) Use MAX and MIN buttons to enter your 4-digit Setpoint 2 value.
Strd **210.5**	Press ENTER	13) Display flashes **"Strd"** message and advances to "Swapping Setpoints" submenu.

Setpoints *cont.*

Display	Action	Response

OUTPUT REDIRECTION: DISPLAY SHOWS "5 ʟo 1" AND CURRENT SETTING, "5 ʟo 1" OR "5 ʟo2"

When "5 ʟo 1" is selected, Setpoint 1 (and OUT 1 configuration) direct the control output at label "Output 1" and Setpoint 2 (and OUT 2 configuration) direct the control output at label "Output 2." When "5 ʟo2" is selected , Setpoint 1 (and OUT 1 configuration) direct the control output at label "Output 2" and Setpoint 2 (and OUT 2 configuration) direct the control at label "Output 1."

Summary	Setting	Setpoint/Out/LED	Output Label
	5 ʟo 1	1 ⟶	1
		2 ⟶	2
	5 ʟo2	1 ⟶	1
		2 ⟶	2

Press MAX — 14) Press MAX to select the output option.
Press ENTER — 15) Press ENTER to make the selection or MENU to advance to "Input Type".

▼ *Note* ☞ Always put unit in stand-by before redirecting the outputs, and always perform a reset afterward to ensure proper operation. With Analog Proportional output option, the following issues need to be considered when redirecting the output: 1) Current (4-20 mA) output is disabled; 2) %Hi/Lo and SELF setting is moved to Out 2 configuration menu; 3) Control Type and Cycle Time appear in Out 1 and is associated with time proportional control at Output 2; 4) Control Type and Cycle Time setting in Out 2 is disregarded by Analog Proportional output.

OPERATION: *CONFIGURATION MODE*

Set Points (if ID Number Disabled - default)

Display	Action	Response
125.5 100.5	Press MENU (1 time) Press MAX Press MIN Press ENTER	With ID number disabled and in Run Mode, pressing MENU one time advances the controller to Setpoint 1 setting directly. **SET POINT 1** 1) Press MENU once from Run Mode. 2) Display flashes the first digit of Setpoint 1. 3) Press MAX to set the digit, 0-9. 4) Press MIN to activate the next digit (flashing). 5) Repeat step 3 and 4 until all digits are set. 6) Controller stores new setting and returns to Run Mode.
125.5 2 10.5	Press MENU (2 times)	**SET POINT 2** 1) Press MENU twice from Run Mode. 2) Display flashes the first digit of Setpoint 2. 3) Follow step 3 to 6 of Setpoint 1 to complete the setting.
125.5 5 to 1	Press MENU (3 times) Press MAX Press ENTER	**OUTPUT REDIRECTION** 1) Press MENU 3 times from Run Mode. 2) Display flashes "5 to 1" in the SV window. (See previous page for more details.) 3) Press MAX to select the output option. 4) Press ENTER to make the selection or MENU to advance to "Input Type".

Display	Action	Response
InPt tYPE	Press MENU Press ENTER	**ENTER INPUT TYPE MENU:** 1) Press MENU, if necessary, until " InPt tYPE" prompt appears. 2) Display flashes "rtd", "tc", or "Proc" (RTD, Thermocouple, Process), if the displayed input type is tc, press MENU to skip to step 5 (tc stops flashing).
InPt t.c	Press MAX Press ENTER Press ENTER	**THERMOCOUPLE SUBMENU:** 3) Press MAX to scroll to "tc" (flashing). 4) Display flashes "stored" message and "tc" stops flashing. 5) Display flashes previous thermocouple type selection. ie. "J" (see below for types).
InPt J	Press MAX Press ENTER	6) Scroll through the available thermocouple types to the selection of your choice. 7) Display flashes "Strd" message and advances to the next menu Reading Configuration.

Note ☞ Use the Input Type (Thermocouple) (RTD) or (Process) and verify your Dip Switch Setting (see section 2.4) and your Electrical Installation (see section 2.5). See the following pages for (RTD) and (Process) menus.

Thermocouple Types: (J,   K,   T,   E,   N,   DIN J,   R,   S,   B,   C)

Display: J   CA   t   E   n   dnJ   r   5   b   C

Input Type (RTD)

Display	Action	Response
InPt tYPE	Press MENU Press ENTER	**ENTER INPUT TYPE MENU:** 1) Press MENU, if necessary, until " InPt tYPE" prompt appears. 2) Display flashes "rtd", "tc", or "Proc" (RTD, Thermocouple, Process), if the displayed input type is rtd, press MENU to skip to step 5 (rtd stops flashing).
InPt rtd	Press MAX Press ENTER Press ENTER	**RTD SUBMENU:** 3) Press MAX to scroll to "rtd" (flashing). 4) Display flashes "stored" message and "rtd" stops flashing 5) Display flashes previous RTD type selection ie. 392.2. (See below for RTD types.)
InPt 392.2	Press MAX Press ENTER	6) Scroll through the available RTD types to the selection of your choice: 7) Display flashes "Strd" message and advances to "rtd uALU".

RTD Types: 385, 392, Two, Three and Four-wire

Display: 392.2 392.3 392.4 385.2 385.3 385.4

Note ☞ Last digit indicates: 2, 3 or 4-wire input.

Input Type (RTD Value)

Display	Action	Response
r t d uALU	Press ENTER	**RTD VALUE SUBMENU:** 8) Press ENTER at "**rtd uALU**" prompt to enter your RTD Value. Display flashes previous RTD value selection ie. **l00_** (see below for RTD value selections)
r t d 100_	Press MAX	9) Scroll through the available RTD Values to the selection of your choice:
Strd 100_	Press ENTER	10) Display flashes "stored" message and advances to "Reading Configuration".

RTD Values:	All RTD's may be:		
	100 ohm	500 ohm	1000 ohm
Display:	*l00_*	*500_*	*l000*

Input Type (Process)

Display	Action	Response
InPt tYPE	Press MENU Press ENTER	**ENTER INPUT TYPE MENU:** 1) Press MENU, if necessary, until " **InPt tYPE**" prompt appears. 2) Display flashes "**rtd**", "**tc**", or "**Proc**" (RTD, Thermocouple, Process), if the displayed input type is Process, press MENU to skip to step 5 (**Proc** stops flashing).
InPt Proc	Press MAX Press ENTER Press ENTER	**PROCESS SUBMENU:** 3) Press MAX to scroll to "**Proc**" (flashing). 4) Display flashes "stored" message and "**Proc**" stops flashing. 5) Display flashes previous Process type selection. ie. "**0-10**" (See below for types.)
Proc 0-10	Press MAX Press ENTER	6) Scroll through the available Process types to the selection of your choice. 7) Display flashes "stored" message and advances to the next menu "Reading Configuration".

Note ☞ Use the Input Type (Thermocouple) (RTD) or (Process) and verify your Dip Switch Setting (see section 2.4) and your Electrical Installation (see section 2.5). See the previous pages for (RTD) and (Process) menus.

Process Types:	100mV	1V	10V	0-20 mA
Display:	0-0.1	0-10	0-10	0-20
Natural Gain	100 cts/mv	10 cts/1mV	1 ct/mV	500 cts/mA
Max Display	9999 @100 mv	9999 @ 1V	9999 @ 10V	9999 @ 20 mA

Note ☞ For 4-20 mA Input select 0-20 mA and adjust the Input Scale & Offset accordingly. To adjust 4-20 mA input. (See example under INPUT Scale & Offset.)

OPERATION: CONFIGURATION MODE

Reading Configuration

Display	Action	Response
rdG CnFG	Press MENU Press ENTER	1) Press MENU, if necessary, until "Reading Configuration" prompt appears. 2) Display advances to "**dEC Pt**" (Decimal Point).
dEC. Pt		**DECIMAL POINT SUBMENU:**
	Press ENTER	3) Display flashes previous selection for decimal location.
dC.Pt FFF.F	Press MAX Press ENTER	4) Scroll though the available selections and choose decimal location: **FFFF.** or **FFF.F** (also **F.FFF** and **FF.FF** — if "Process" type was selected in the "**InPUt tYPE**" menu). 5) Display flashes "**Strd**" message and advances to "Temperature Unit".
	Note ☞	Decimal point for Process input type is passive.
tEMP Unit		**TEMPERATURE UNIT SUBMENU:**
	Press ENTER	6) Display flashes previous Temperature Unit selection.
tEMP oF	Press MAX Press ENTER	7) Scroll though the available selections to the temperature unit of your choice: **°F** or **°C**. 8) Display flashes "**Strd**" message and advances to "Filter Constant".

Reading Configuration *cont.*

Display	Action	Response
FLtr CnSt		**FILTER CONSTANT SUBMENU:**
	Press ENTER	9) Display flashes previous selection for filter constant.
	Press MAX	10) Scroll though the available selections: **0001, 0002, 0004, 0008, 0016, 0032, 0064, 0128. - Default is 0004**
FLtr 0001	Press ENTER	11) Display flashes "stored" message only if change was made.

Note ☞ For PID control select filter value 0001-0004. A filter value of 2 is approximately equal to 1 sec. RC low pass time constant.

If Process was selected in the "Input Type" menu the display will advance to "Input SC & OFF", otherwise the display advances to the "Alarm 1" menu.

Note ☞ The **Filter Constant** submenu allows the user to specify the number of readings stored in the digital averaging filter.

Reading Configuration *cont. (If process was selected)*

Display	Action	Response
		INPUT SCALE & OFFSET SUBMENU:
InPt SC.OF	Press ENTER	12) Press enter at the " InPt SC.OF" prompt. Display flashes 1st digit in submenu " In 1"
In 1 2000.	Press MAX & MIN	13) Use MAX and MIN buttons to enter " In 1" value. The " In 1" value = min. input value * the natural gain. Example: 4(mA) x 500 = 2000
	Press ENTER	14) Display advances to "rd 1" submenu.
rd 1 0000.	Press MAX & MIN	15) Use MAX and MIN buttons to enter "rd 1" value. This value responds to " In 1" in terms of some meaningful engineering units
	Press ENTER	16) Display advances to " In 2" submenu. The " In 2" value = max. input value * the natural gain. Example: 20(mA) x 500 = 10000 (9999)
In 2 9999.	Press MAX & MIN	17) Use MAX and MIN buttons to enter " In 2" value.
	Press ENTER	18) Display advances to "rd 2" submenu.
rd 2 0100.	Press MAX & MIN	19) Use MAX and MIN buttons to enter "rd 2" value.
	Press ENTER	20) Display flashes "stored" message and advances to "ALAr 1" menu.

Note ☞ **This submenu allows the user to scale the meter when in Process Mode and the above display value is an example for 4-20 mA input (4 to 20 mA = 0000 to 0100%).**

Modifying Alarm settings will not reset the controller
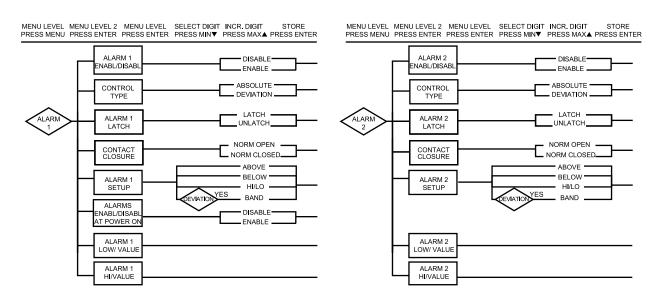

Figure 3.4 Flowchart for Alarm 1 and Alarm 2

Alarm 1

Display	Action	Response
RLAr 1	Press MENU Press ENTER	1) Press MENU, if necessary, until "**RLAr 1**" prompt appears. 2) Display advances to "**RLAr.1 EnbL**" or "**dSbL**" submenu.
RLr.1 EnbL	Press MAX Press ENTER	**ALARM 1 ENABLE/DISABLE SUBMENU:** 3) Display flashes previous selection. Press MAX until "**EnbL**" displays to use Alarm 1. 4) Display flashes "**Strd**" message only if it was changed, otherwise press MENU to advance to "Control Type" submenu.
RLr.1 RbSo	Press MAX Press ENTER	**CONTROL TYPE SUBMENU:** 5) Display flashes previous selection. Press MAX to "**RbSo**" or "**dEu**" 6) Display flashes "**Strd**" message only if it was changed, otherwise press MENU to advance to "Alarm 1 Latch" submenu.

Note ☞ **Absolute** Mode allows Alarm 1 to function independently from Setpoint 1. If the process being monitored does not change often, then "Absolute" Mode is recommended.

Deviation Mode allows changes to Setpoint 1 to be made automatically to Alarm 1. Deviation Mode is typically the ideal mode if the process temperature changes often. In Deviation Mode, set Alarm 1 a certain number of degrees or counts away from Setpoint 1 — this relation remains fixed even if Setpoint 1 is changed.

Alarm 1 *cont.*

Display	Action	Response
ALr.1 **LtCH**	Press MAX Press ENTER	**ALARM LATCHED OR UNLATCHED SUBMENU:** 7) Display flashes previous selection. Press MAX to **Latched** or **Unlatched**. 8) Display flashes "**Strd**" message and advances to "Contact Closure" submenu.
ALr.1 **n.o.**	Press MAX Press ENTER	**CONTACT CLOSURE SUBMENU:** 9) Display flashes previous selection. Press MAX to **Normally Closed (nc)** or **Normally Open (no)**. 10) Display flashes "**Strd**" message only if it was changed, otherwise press MENU to advance to "Alarm 1 Setup" submenu.
ALr.1 **Abou**	Press MAX Press ENTER	**ALARM 1 SETUP SUBMENU:** 13) Display flashes previous selection. Press MAX to scroll through the available selections: **Above, Below, HI/Low** and **Band** (Band is active if "Deviation" was selected). 14) Display flashes "**Strd**" message only if it was changed, otherwise press MENU to advance to "Alarm 1 Low Value" submenu.

Above: Alarm 1 condition triggered when the process variable is greater than the Alarm **Hi Value**. (Lo value ignored)
Below: Alarm 1 condition triggered when the process variable is less than the Alarm **Low Value**. (Hi value ignored)
Hi/Low: Alarm 1 condition triggered when the process variable is less than the Alarm **Low Value** or above the **Hi Value**.
Band: Alarm 1 condition triggered when the process variable is above or below the "Band" set around Setpoint 1. Band equals **Hi Value** (Lo Value ignored). A "Band" is set around the Setpoint 1 by the controller only in the "Deviation" Mode.

Alarm 1 *cont.*

Display	Action	Response
A.P.on EnbL	Press MAX	**ALARMS ENABLE/DISABLE AT POWER ON:** 11) Display flashes previous selection. Press MAX to enable or disable. **Note** ☞ If the alarm is enabled at Power On, the alarm will be active right after reset. If the alarm is disabled at Power On, the alarm will become enabled when the process value enters the non alarm area. The alarm is not active while the Process value is approaching Setpoint 1.
	Press ENTER	12) Display flashes "Stored" message only if it was changed, otherwise press MENU to advance to the "Alarm 1 Low Value" submenu.
AL 1.L 0762	Press MAX & MIN Press ENTER	**ALARM 1 LOW VALUE SUBMENU:** 15) Display flashes 1st digit of previous value. Use MAX and MIN to enter new value. 16) Display flashes "**Strd**" message, only if it was changed, otherwise press MENU to advance to "Alarm 1 HI Value" submenu.
AL 1.H 2722	Press MAX & MIN Press ENTER	**ALARM 1 HI VALUE SUBMENU:** 17) Display flashes 1st digit of previous value. Use MAX and MIN to enter new value. 18) Display flashes "**Strd**" message only if it was changed, otherwise press MENU to advances to "Alarm 2" submenu.

Note ☞ **Latched** Mode: Relay remains "latched" until reset. To reset a latched alarm, put unit into "Stand-by" Mode by pressing the ENTER button twice. Then, enter back into Run Mode by pressing the ENTER button a third time and alarm will be de-energized.
Unlatched Mode: Relay remains latched only as long as the alarm condition is true.
Normally Closed:"Fail Safe" Mode, relay is energized under "normal" conditions and becomes de-energized during alarm or power failure.
Normally Open: If this feature is selected, then the relay is "energized" only when an alarm condition occurs.

Alarm 2

Display	Action	Response
ALAr 2	Press MENU Press ENTER	1) Press MENU, if necessary, until "ALAr 2" display appears. 2) Display advances to "Alarm 2 Enable/Disable" submenu.
not_ InSt	Press MENU	*IF ALARM 2 IS NOT INSTALLED, THE CONTROLLER WILL SHOW "NOT INSTALLED"* Press MENU, if you receive the "not installed" message and advance to the "Loop Break" menu.
ALr.2 EnbL	Press MAX Press ENTER	**ALARM 2 ENABLE/DISABLE SUBMENU:** 3) Display flashes previous selection. Press MAX until "EnbL" displays to use Alarm 2. 4) Display flashes "Strd" message only if it was changed, otherwise press MENU to advance to "Control Type" submenu.

Note ☞ **The remaining Alarm 2 is identical to Alarm 1 i.e. previous two pages.**

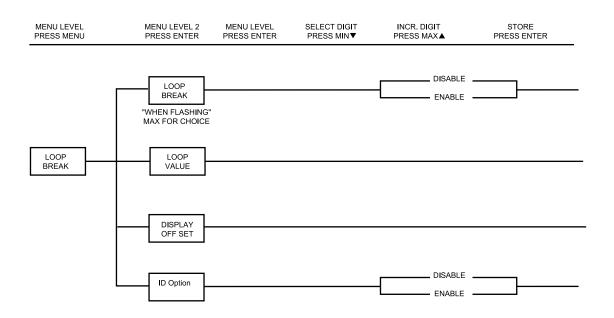

Figure 3.5 Flowchart for Loop Break

Loop Break Alarm

Display	Action	Response
`LOOP br.AL`	Press MENU Press ENTER	1) Press MENU, if necessary, until the "Loop Break" prompt appears. 2) Display advances to "Loop Break Enable/Disable" submenu.
`L.b.AL EnbL`	Press ENTER Press MAX Press ENTER	**LOOP BREAK ENABLE/DISABLE SUBMENU:** 3) Display flashes "`EnbL`" or "`dSbL`". 4) Scroll through the available selections: **Enable (`EnbL`)** or **Disable (`dSbL`)**. 5) Display flashes "`Strd`" message and advances to "Loop Value" menu.

Note ☞ **Loop Break** is an additional safety feature intended to monitor the rate of change of the process value, while approaching the SPI. It is strictly intended as an additional warning system, therefore its use is entirely optional. An active Loop Break will cause the setpoint digits to blink in a rotating pattern. If the process value reaches the setpoint the blinking will stop and `LooP brA1` is completed successfully, otherwise `LooP brA1` will flash and will activate `ALr1`.

Loop Break Alarm *cont.*

Display	Action	Response
L.b.AL **00.17**	Press ENTER Press MAX & MIN Press ENTER	**LOOP BREAK ALARM VALUE SUBMENU:** 6) Display flashes 1st digit of previous loop value. 7) Press MAX and MIN buttons to enter a new "Loop Value". 8) Display flashes "**Strd**" message and advances to "CJ Temperature Adjust" Menu.
t.Ad J **006.7**	Press ENTER Press MAX & MIN Press ENTER	**TEMPERATURE ADJUST SUBMENU:** 9) Display flashes 1st digit of previous temperature adjust value. 10) Press MAX and MIN buttons to enter a new "Temperature Adjust" value. 11) Display flashes "**Strd**" message and advances to "ID Option" submenu.

Note ☞ **Loop Break Alarm Value** allows the user to determine the time interval in MM:SS (from zero to 99 minutes and 59 seconds) that the process value changes 10 counts or if the input type is either RTD or Thermocouple, the value would be 4°Fahrenheit or 2°Celsius. At the specified time interval, if the process value change is less than the stated rate flashing, "**LbAL**" will be displayed, the output "**l**" will be de-energized, and Alarm 1 energized. Loop Break Alarm will be disabled when the process value (PV) enters the control band.

Tip ☞ Display Offset Adjust allows the user to fine tune a minor error of the transducer, however some applications may require a large offset adjust. (Displayed Process Value = Measured Process Value ± **t.Ad J**). **t.Ad J** is adjustable between -1999 to 9999.

Loop Break Alarm *cont.*

Display	Action	Response
		ID CODE OPTION SUBMENU
		12) Display flashes current status of ID Option, enabled or disabled.
`Id` `dSbL`	Press MAX	13) Press MAX button to select between **Enable** and **Disable**.
	Press ENTER	14) Display flashes "**Strd**" and advances to "Output 1."

Note☞ With ID Code Option disabled, the ID Number submenu is hidden. Refer to the appropriate setpoints section for setting differences.

Figure 3.6 Flowchart for Output 1

OPERATION: *CONFIGURATION MODE*

Output 1

Display	Action	Response
oUt 1	Press MENU Press ENTER	1) Press MENU, if necessary, until the "**oUt 1**" prompt appears. 2) Display advances to "Self" submenu.
		SELF SUBMENU The Self Option allows the output of the controller to be controlled manually from the front panel.
SELF dSbL	Press MAX Press ENTER	3) Display flashes the current setting of Self, enabled or disabled. 4) Press the MAX button to select between Enable and Disable. 5) If Self enable was selected, Output 1 setting is completed and the display advances to the next menu.

Note☞ The output is now under the direct control of the operator and can be adjusted in the run mode, by pressing the MAX and| MIN buttons. The control value (0 - 99), now displayed in the SV window indicate, approximately in percent, the output. For example, a setting of 0050 of an analog output of 0~10 Vdc would produce roughly 5 Vdc at the output. Also, to insure smooth transition when switching to self mode, the proportional control output is left in its last value, when Self Mode is activated for the first time.

6) Display advances to the "Minimum/Percent Low" submenu, if Self is disabled.

MINIMUM/PERCENT LOW SUBMENU
Specify in percent, the minimum value (0000) for control output. If the output is analog, then the minimum voltage or current, in percent, is specified. If the output is time proportional, then the minimum duty-cycle, in percent, is specified.

Display	Action	Response
oºLO 0000	Press MIN & MAX Press ENTER	7) Display shows "**oºLO**", and flashes the 10s digit of the current "Percent Low" setting. 8) Use MAX & MIN buttons to enter a new value for "Percent Low". 9) Press ENTER to store the current setting and to advance to Maximum/Percent High.

Output 1 *cont.*

Display	Action	Response

MAXIMUM/PERCENT HIGH SUBMENU
Specify in percent, the maximum value (0099) for control output. If the output is analog, then the maximum voltage or current, in percent, is specified. If the output is time proportional, then the maximum duty-cycle, in percent, is specified.

oHI
0099

Press MIN & MAX — 10) Display shows "o**o**H**i**" and flashes the 10s digit of the current Percent Low setting.
Press ENTER — 11) Use MAX & MIN buttons to enter a new value for Percent Low.
— 12) Press ENTER to store the current setting and to advance to *Control Type submenu.

Example: On an analog output of 0~10 Vdc, a setting of %LO = 10 and %HI = 90, cause the minimum on the control output to be 1 V and the maximum on the control output to be 9 V. The same setting on a time proportional output, will cause 10% duty cycle for the minimum control output and 90% duty cycle for the maximum control output. To disable %LO/HI, set LO to 00 and HI to 99. If %LO/HI is at other values than the default (%LO = 00, %H I= 99), "Soak" is disabled.

CtrL
tYPE

*CONTROL TYPE SUBMENU: *(Relay, SSR or Pulse Option)*
Press ENTER — 13) Display flashes "**On.OF**" or "**P id**".
Press MAX — 14) Scroll through the available selections: **ON/OFF** or **PID**.

CtrL
P Id

Press ENTER — 15) Display flashes "**Strd**" message and advances to "Action Type" submenu.

Note ☞ The **ON/OFF** control is a coarse way of controlling the process. The "Dead Band" improves the cycling associated with the On/Off control. The **PID** control is best for processes where the setpoint is continuously changing and/or a tight control of the process variable is required. PID control requires tuning and adjustment of the "Proportional", "Integral or Reset" and "Derivative or Rate" terms by a trial-and-error method. The Controller provides an "Auto Tuning" feature making the tuning process automatic, possibly optimum.

Output 1 *cont.*

Display	Action	Response

4-20
CUrr

*If Current/Voltage is your analog control output 1, this menu i.e. **ctrL** type will not appear, instead 4-20/Curr will be displayed. Select "**EnbL**" for a 4-20 mA (2-10 V) output or "**dSbL**" for a 0-20 mA (0-10 V) output. If 4-20 mA is enabled, %HI/LO setting will have no effect.

Note ☞   **Both Current and Voltage control outputs are active simultaneously.**

ACtn
tYPE

ACtn
drCt

ACTION TYPE SUBMENU:
Press ENTER   16)   Display flashes "**drCt**" or "**rurS**".

Press MAX   17)   Scroll through the available selections: **Direct** or **Reverse**.
Press ENTER   18)   Display flashes "**Strd**" message and advances to "Auto PID" submenu.

If "ON/OFF" was selected in the Control Type, the display skips to the "Dead Band" submenu.

Note ☞   The error that results from the measurement of the process variable may be positive or negative since it may be greater or smaller than the set point. If a positive error should cause the controller output to increase (i.e. cooling), it would be called **Direct Acting**. If a negative error should cause the output to increase (i.e. heating), it would be called **Reverse Acting**.

Output 1 *cont.*

Display	Action	Response
AUTO P Id **AUTO EnbL**	Press ENTER Press MAX	**AUTO PID SUBMENU:** 19) Display flashes "**EnbL**" or "**dSbL**". 20) Scroll through the available selections: Enable or Disable. If "**Enabled**", the controller can determine, by enabling Start PID, the optimum values for the three adjustments — Proportional, Reset and Rate corresponding to P, I, and D. These values may be changed once the auto tuning is complete. If "**Disabled**" is selected, the user will manually enter these three adjustment values. If you want the controller to do the auto **P Id** and the **P**, **P I** or **P Id**, first select auto disable and enter 0000 for the unwanted parameter. e.g. for **P I** enter 0000 for the rate.
	Press ENTER	21) Display flashes "stored" message and advances to "Adaptive Control" submenu.
AdPt CtrL **AdPt EnbL**	Press ENTER Press MAX	***ADAPTIVE CONTROL SUBMENU: *** *(NOT INSTALLED)* 22) Display flashes "**EnbL**" or "**dSbL**". 23) Scroll through the available selections: **Enable** or **Disable**. If "**Enabled**", the Adaptive Tuning dynamically changes and updates the P, I, and D parameters for optimum control. The adaptive tuning is useful when the load continuously changes thereby requiring new values for **P**, **I,** and **d**.
	Press ENTER	24) Display flashes "stored" message and advances to "Anti Integral" submenu.

Output 1 *cont.*

Display	Action	Response
`Anti IntG`	Press ENTER Press MAX	**ANTI INTEGRAL SUBMENU:** 25) Display flashes "`EnbL`" or "`dSbL`". 26) Scroll through the available selections: **Enable** or **Disable**.
`Anti EnbL`		If "**Enabled**", this feature allows the error term outside the proportional band to be calculated and accumulated for integration. This may be an important feature in applications where fast response time is desirable.
	Press ENTER	27) Display flashes "stored" message and advances to "Proportional Band" submenu if Auto PID was disabled, otherwise it will go to "**Start PID**".
`Strt PId`	Press ENTER Press MAX	**START AUTO TUNE PID:** 28) Display flashes "`EnbL`" or "`dSbL`". 29) Scroll through the available selections: **Enable** or **Disable**.
`Strt EnbL`		If "**Enabled**", the controller is ready to calculate P, PI or PID parameters. The setpoints must be at least 20°F or 11°C above the (PV) Process Value in order to perform autotune, otherwise an error message will be displayed.
	Press ENTER	30) Display flashes "`Strd`" message and advances to the "Cycle Time" submenu.

> Note ☞ *To start Auto Tune PID select PID, enable Auto PID and enable Start PID. Sometimes Auto PID parameter needs fine tuning i.e. for each 5°F over shoot increase the Proportional Band (PB) by 15% and for each ±1°F fluctuation at the Setpoint (SP) increase reset by 20%.* **Once started, display shows "ALUn" with the letters blinking in the rotating pattern. Do not perform any operations or settings before first stopping Auto Tune. Any alarms or other output is disabled during Auto Tune.**

Output 1 *cont.*

Display	Action	Response
		If **"AUTO TUNE PID"** was **"DISABLED"**, the display will show the following three submenus so the user may manually enter values for Proportional, Reset and Rate terms corresponding to P, I, and D. It also can be used for auto PID for disabling unwanted parameters e. g. PI, enter 0000 for rate:
`PrOP bAnd`	Press ENTER Press MAX & MIN Press ENTER	**PROPORTIONAL BAND SUBMENU:** 28) Display flashes 1st digit of the previous P "Proportional Band" value. 29) Press MAX and MIN buttons to enter a new "Proportional Band" value. 30) Display flashes "`Strd`" message and advances to "Reset Setup" submenu. **NOTE:** Proportional band is in degrees of temperature or counts of process.
`rESt StUP`	Press ENTER Press MAX & MIN Press ENTER	**RESET SETUP SUBMENU:** 31) Display flashes 1st digit of the previous I "Reset" value. 32) Press MAX and MIN buttons to enter a new "Reset" value. 33) Display flashes "`Strd`" message and advances to "Rate Setup" menu. **NOTE:** Reset unit is in seconds 0-3999.
`rAtE StUP`	Press ENTER Press MAX & MIN Press ENTER	**RATE SETUP SUBMENU:** 34) Display flashes 1st digit of previous D "Rate" value. 35) Press MAX and MIN buttons to enter a new "Rate" value. 36) Display flashes "`Strd`" message and advances to the "Cycle Time" submenu for RTD and Thermocouple types. **If the Output 1 is analog option the display skips to "Damping Factor".** **NOTE:** Rate unit is in seconds 000.0-399.9.

Output 1 *cont.*

Display	Action	Response
`CYCL` `t IME`	Press ENTER	**CYCLE TIME SUBMENU:** 37) Display flashes 1st digit of the previous "Cycle Time" value.
`CYCL` `00 10`	Press MAX & MIN	38) Press MAX and MIN buttons to enter a new "Cycle Time" value. (1 to 199 seconds).
	Press ENTER	39) Display flashes "stored" message and advances to "Damping Factor" submenu.

Note☞ A Cycle Time selected between 1 and 199 seconds determines the total On/Off time of each proportional cycle. For example, a 15 second Cycle Time means that every 15 seconds the output will turn on for part or all of the cycle. For Relay control outputs, do not select a cycle time of less than 7 seconds or the relays life time will be shortened. For a Cycle Time of less than 7 seconds select SSR or DC pulse. Use an external SSR with the DC pulse option for higher currents (higher than 1 Amp).

Output 1 *cont.*

Display	Action	Response
dPnG FCtr	Press ENTER	**DAMPING FACTOR SUBMENU:** 40) Display flashes the previous "Damping Factor" selection.
dPnG 0001	Press MAX	41) Scroll through the available selections: **0000, 0001, 0002, 0003, 0004, 0005, 0006, 0007, 0008 - Default is 0003.**
	Press ENTER	42) Display flashes "**Strd**" message and advances to the "Output 2" menu.

Note **Damping Factor** is a measure of speed, overshoot, and undershoot in which the process variable responds to the output changes of the controller, which were used during the Auto Tune. This value is typically set to the ratio of Rate to Reset. This Default value is (0003). For fast response time, this value should be decreased while for slow response time it should be increased.

Output 1 *cont.*

Display	Action	Response
		The "Dead Band" submenu will only appear if the "On/Off" was selected from the "Control Type" menu.
dEAd bAnd	Press ENTER	**DEADBAND SUBMENU:** 43) Display flashes 1st digit of the previous "Dead Band" value.
dEAd 006.7	Press MAX & MIN Press ENTER	44) Press MAX and MIN buttons to enter a new "Dead Band" value 45) Display flashes "**Strd**" message and advances to the "Output 2" menu. **Note** ☞ Dead Band units are the degree of temperature or counts of process.

Note ☞ The Dead Band or neutral zone is the number of degrees or counts (if input type is process) around the setpoint which the process variable must pass above or below the setpoint, before the output changes state.

MENU LEVEL PRESS MENU	MENU LEVEL 2 PRESS ENTER	MENU LEVEL PRESS ENTER	SELECT DIGIT PRESS MIN▼	INCR. DIGIT PRESS MAX▲	STORE PRESS ENTER
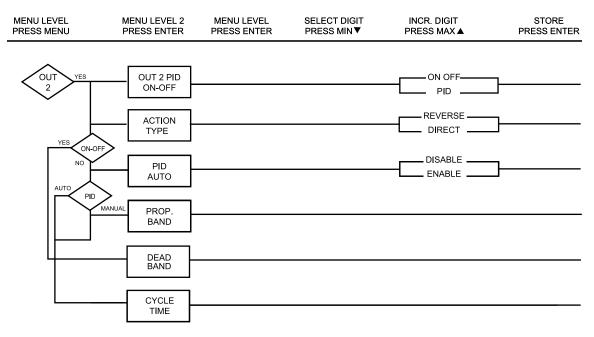

Figure 3.7 Flowchart for Output 2

Output 2

Display	Action	Response
oUt 2	Press MENU Press ENTER	1) Press MENU, if necessary, until the "**oUt 2**" prompt appears. 2) Display advances to "Control Type" submenu.
not_ InSt	Press MENU	***IF OUTPUT 2 IS NOT INSTALLED, THE CONTROLLER WILL SHOW "NOT INSTALLED"*** Press MENU, if the "not installed" message is displayed, advance to the "Ramp & Soak" submenu.
CtrL tYPE	Press ENTER Press MAX	**CONTROL TYPE SUBMENU:** 3) Display flashes "**On.OF**" or "**P Id**". 4) Scroll through the available selections: **On.OF** or **P Id**.
CtrL P Id	Press ENTER	5) Display flashes "**Strd**" message and advances to "Action Type" submenu.

Note ☞ The **ON/OFF** control is a coarse way of controlling the process. The "Dead Band" improves the cycling associated with the On/Off control. The **PID** control is best for processes where the set point is continuously changing and/or tight control of the process variable is required.

Output 2 *cont.*

Display	Action	Response
ACtn tYPE	Press ENTER	**ACTION TYPE SUBMENU:** 6) Display flashes "drCt" or "rUrS".
	Press MAX	7) Scroll through the available selections: **Direct** or **Reverse**.
ACtn drCt	Press ENTER	8) Display flashes "Strd" message and advances to "Auto PID" submenu. **If "ON/OFF" was selected in the Control Type, the display skips to the "Deadband" submenu.**

Note ☞ The error that results from the measurement of the process variable may be positive or negative since it may be greater or smaller than the set point. If a positive error should cause the controller output to increase (i.e. cooling), it would be called **Direct Acting**. If a negative error should cause the output to increase (i.e. heating), it would be called **Reverse Acting**.

Output 2 *cont.*

Display	Action	Response
AULO **P Id** **AULO** **EnbL**	Press ENTER Press MAX Press ENTER	**AUTO PID SUBMENU:** 9) Display flashes "**EnbL**" or "**dSbL**". 10) Scroll through the available selections: **Enable** or **Disable**. If "**Enabled**", the PID parameter of Output 1 will be copied to Output 2. 11) Display flashes "**Strd**" message and advances to the next submenu — **If "Auto PID" was "Enabled", the display skips to the "Cycle Time" submenu.** **If "Auto PID" was "Disabled", the display will show the "Proportional Band" submenu allowing the user to manually enter the Proportional Band value.** Note ☞ *The Reset and Rate value are the same as Output 1.*
PrOP **bAnd**	Press ENTER Press MAX & MIN Press ENTER	**PROPORTIONAL BAND SUBMENU:** 12) Display flashes 1st digit of the previous "Proportional Band" value. 13) Press MAX and MIN buttons to enter a new "Proportional Band" value. 14) Display flashes "**Strd**" message and advances to the "Cycle Time" submenu. Note ☞ *Refer to Proportional Band, submenu of Output 1 Menu.*

Output 2 *cont.*

Display	Action	Response
`CYCL t1ME`	Press ENTER	**CYCLE TIME SUBMENU:** 15) Display flashes 1st digit of the previous "Cycle Time" value.
`CYCL 0010`	Press MAX & MIN	16) Press MAX and MIN buttons to enter a new "Cycle Time" value. (1 to 199 seconds).
	Press ENTER	17) Display flashes "stored" message and advances to "Ramp & Soak" Menu.

Note ☞ A Cycle Time selected between 1 to 199 seconds indicates the total On/Off time of each proportional cycle. For example, a 15 second Cycle Time means that every 15 seconds the output will turn on for part or all of the cycle. For Relay control outputs, do not select a cycle time of less than 7 seconds or the relays life time will be shortened. For a cycle time of less than 7 seconds select SSR or DC pulse. Use an external SSR with the DC pulse option for higher current (higher than 1 Amp).

Output 2 *cont.*

Display	Action	Response
		The "Dead Band" submenu will only appear if the "On/Off" was selected from the "Control Type" menu.
dEAd bAnd	Press ENTER	**DEAD BAND SUBMENU:** 18) Display flashes 1st digit of the previous "Dead Band" value.
dEAd 006.7	Press MAX & MIN Press ENTER	19) Press MAX and MIN buttons to enter a new "Dead Band" value. 20) Display flashes "stored" message and advances to the "Ramp Value" menu. **Note ☞** Refer to Dead Band submenu of Output 1 Menu.

Note ☞ The Dead Band is the number of degrees or counts around the setpoint which the process variable must pass through before the output changes state.

MENU LEVEL PRESS MENU	MENU LEVEL 2 PRESS ENTER	MENU LEVEL PRESS ENTER	SELECT DIGIT PRESS MIN▼	INCR. DIGIT PRESS MAX▲	STORE PRESS ENTER
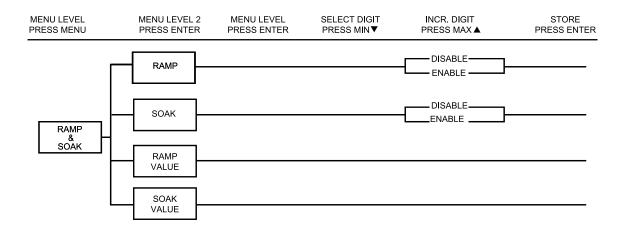

Figure 3.8 Flowchart for Ramp & Soak

Ramp & Soak

Display	Action	Response
rAMP SoAc	Press MENU Press ENTER	1) Press MENU, if necessary, until the "**rAMP SoAc**" prompt appears. 2) Display advances to "Ramp Enable/Disable" submenu.
rAMP EnbL		**RAMP ENABLE/DISABLE SUBMENU:**
	Press ENTER	3) Display flashes "**EnbL**" or "**dSbL**".
	Press MAX	4) Scroll through the available selections: **Enable** or **Disable**.
	Press ENTER	5) * Display flashes "**Strd**" message and advances to "Soak Enable/Disable" submenu.
SoAc EnbL		**SOAK ENABLE/DISABLE SUBMENU:**
	Press ENTER	6) Display flashes "**EnbL**" or "**dSbL**".
	Press MAX	7) Scroll through the available selections: **Enable** or **Disable**.
	Press ENTER	8) Display flashes "**Strd**" message and advances to "Ramp Value" submenu.

Note ☞ Ramp & Soak provides users with the flexibility to slowly bring the process variable to the desired set point. Ramp & Soak Values are specified in HH.MM format. The Ramp Value indicates the time specified to bring the process variable to Setpoint 1. Once setpoint is reached, the PID takes over and the process variable will be controlled at the desired setpoint indefinitely. If Soak is enabled, PID will control the process variable at the specified setpoint for the duration of soak time and then will turn off Output 1. To start a new ramp/soak cycle, reset the controller by pressing MENU and then MIN button.An active ramp/soak will change SP1 one degree above the PV and will cause the most significant digit to blink. The SP1 will be incremented by one degree until it reaches the original SP1. The minimum ramp time must be at least twice the time that it will take the PV to reach the SV with OUT1 fully ON.

* NOTE: If "Ramp" Disable was selected, the display skips "Soak" submenu to the next menu item.

Ramp & Soak *cont.*

Display	Action	Response
rAMP 05.67	Press ENTER Press MAX & MIN Press ENTER	**RAMP VALUE SUBMENU:** 9) Display flashes 1st digit of previous "rAMP" value. 10) Press MAX and MIN buttons to enter a new "rAMP" value. 11) Display flashes "Strd" message and advances to "Soak Value" submenu.
SoAc 05.67	Press ENTER Press MAX & MIN Press ENTER	**SOAK VALUE SUBMENU:** 9) Display flashes 1st digit of previous "Soak" value. 10) Press MAX and MIN buttons to enter a new "Soak" value. 11) Display flashes "Strd" message and advances to the "Analog Output".

Note ☞   The Ramp & Soak time is 00:00 to 99:59 i.e. HH.MM.(from zero to 99 hours and 59 minutes)
During Ramp & Soak do not perform any operations or settings before first pressing MENU and MIN buttons or using software disable Ramp. Any alarms or other output are disabled during this time.

3.3 Available Options

The Controller may be ordered with one of the three following options:

1) **Analog Output:** This option provides additional flexibility to transmit the equivalent value of process variable to other devices using a 4 to 20 mA current loop or 0-10 V signal.

2) **Communication Option:** This option makes the controller a very powerful instrument providing the user with even greater capability since all the parameters can be transmitted via a personal computer.

3) **Remote Setpoint:** One of the three already stored setpoints can be activated.

Analog Output Option

`tr.t i` `0030`		**TRANSMIT TIME VALUE SUBMENU:**
	Press ENTER	56) Display flashes 1st digit of previous transmit time in seconds.
	Press MAX & MIN	57) Enter new transmit time, e.g. 0030 will send every 30 seconds the data in Continuous Mode.
	Press ENTER	58) Display flashes "`Strd`" message and advances to "Remote Setpoint" menu. If no change press "Menu" to go on.

Note ☞ Transmit time can be set from 0 to 9999.

このセグメントはない

COMMUNICATION COMMANDS (Table 3.1)	
Command Prefix (Command Class)	Meaning
^AE	Special read, Communication parameters
P (Put)	Write HEX data into RAM
W (Write)	Write HEX data into EEPROM. **1,000,000 writes to EEPROM is guaranteed!**
G (Get)	Read HEX data from RAM
R (Read)	Read HEX data from EEPROM
U	Read status byte
V	Read measurement data string in decimal format
X	Read measurement data values in decimal format
D	Disable
E	Enable
Z	Reset

Command Formats

For "P" and "W" Command Classes:	For "G" and "R" Command Classes:	For "X", "V", "U", "D", "E" and "Z" Command Classes:
Point-to-point mode: * ccc [<data>] <CR>	**Point-to-point mode:** * ccc <CR>	**Point-to-point mode:** * ccc <CR>
Multipoint mode: * nnccc [<data>] <CR>	**Multipoint mode:** * nnccc <CR>	**Multipoint mode:** * nnccc <CR>

Command Formats *cont.*

Where **"*"** is the selected Recognition Character. You may select any ASCII table symbol from "!" (HEX address "21") to the right-hand brace (HEX "7D") except for the caret "^", "A", "E", which are reserved for bus format request. "(nn)" are the two ASCII characters for the device Bus Address. Use values from "00" to hex "C7" (199 decimal).

"ccc" stands for the hex-ASCII Command Class letter (one of eleven given in table 3.12), followed by the two Hex-ASCII Command Suffix characters identifying the meter data, features or menu items to which the command is directed (given in table 3.13).

"<data>" is the string of characters containing the variable information the computer is sending to the meter. These data (whether BCD or binary) are encoded into Hex-ASCII characters, two characters to the byte. Square brackets (indicating optional status) enclose this <data> string, since some commands contain no data.

"<nn>" is the device address for RS-485 communication and the max is 199 in decimal.

Examples:

1. To reset the controller, send *Z02 (Table 3.1)
2. To read Setpoint 1, send *R01 (Table 3.2)
3. To change Setpoint 1 to 100.0

Command Formats *cont.*

Description: SETPOINT.23 ~ 0 means 3 bytes x 8 bit positions (2 characters in each byte).

SETPOINT.23 = 0 = positive sign   **SETPOINT.22~20** = 000 - Not Allowed   **SETPOINT.19~0** = Setpoint data
            1 = negative sign   001 - Decimal Point 1 (XXXX.)
                                        010 - Decimal Point 1 (XXX.X)
                                        011 - Decimal Point 1 (XX.XX)
                                        101 - Decimal Point 1 (X.XXX)
                                        *Process Only

For 100.0: Positive sign = 0, Decimal Point 2 = 010 Bin, Setpoint data 1000 = 3E8 Hex = 001111101000 Bin
The command data =   0010   0000   0000   0011   1110   1000   Bin = 2003E8 Hex
                             A   **0**   **0**   **3**   **E**   **8**   Hex

Send *W01 2 003E8, where
*W01 - *<ccc> - write to Setpoint 1 (Table 3.1)
2003E - <data> - Setpoint data including sign and decimal point (Table 3.2)

Command Formats *cont.*

`Note` ☞ No spaces are allowed in the data string. The spaces provided in the previous example are for illustration purposes only.

`Note` ☞ Decimal Point position for TC/RTD = 1 or 2, for PROCESS = 1, 2 , 3, or 4.

`Note` ☞ Decimal Point position for setpoint should be the same as Decimal Point position sets for Process Value and can not be overwritten by SETPOINT command. (See RDGCNG command, described below.)

4. To change Setpoint 1 to -100.0
For (-100.0): Negative sign = 1, Decimal Point 2 = 010 Bin, Setpoint data 1000 = 3E8 Hex = 001111101000 Bin
The command data =   1010   0000   0000   0011   1110   1000 Bin = A003E8 Hex
                                        A   0   0   3   E   8
Send *W01A003E8

5. To send the same as above for RS-485 of transit address 01 the command is *01W01A03E8.

`Note` ☞ Default settings are Recog. Char. "*", 9600 bps, 7 data, 1 stop, and Odd Parity.

			1000	B			
			1001	C			

Example: Set RTD, 4-wire, .00392 Curve, 100 m ohms. The command data is 00001001Bin = 09Hex. Send *W0709.

Note ☞ Send Read Command first to determine the bits which are not specified for some positions (TC, PC for positions 7, 6 above).

Command Formats *cont.*

RDGCNF.210 = 000 Not Allowed
001 Decimal Point 1 (XXXX.)
010 Decimal Point 2 (XXX.X)
011 Decimal Point 3* (XX.XX)
100 Decimal Point 4* (X.XXX)
*Process only

RDGCNFG.3 = 0 °C
1 °F

RDGCNFG.765 = 000 Filter constant 1
001 Filter constant 2
010 Filter constant 4
011 Filter constant 8
100 Filter constant 16
101 Filter constant 32
110 Filter constant 64
111 Filter constant 128

Example: Set Decimal Point 1, °C, Filter constant 16. The command data is 10000001Bin = 81Hex. Send *W0881.

Note ☞ Send a Read Command first to determine the proper Decimal Point position (*R08).

OPERATION: *CONFIGURATION MODE*

Command Formats *cont.*

AL1CNFG.0 = 0 Disable **AL1CNFG.1** = 0 Absolute **AL1CNFG.2** = 0 Unlatch **AL1CNFG.3** = 0 Normally Open
         1 Enable   1 Deviation   1 Latch   1 Normally Closed

AL1CNFG.54 = 00 Above **AL1CNFG.6** = 0 Loop Break Alarm Disable **AL1CNFG.7** = 0 Alarm Power On Enable
         01 Below   1 Loop Break Alarm Enable   1 Alarm Power On Disable
         10 Hi/Lo
       * 11 Band
      * Deviation Only

Example: Set Alarm 1 Enable, Deviation, Unlatch, N.C., Band, Loop Disable, Alarm Power On Enable. The command data is 10111011Bin = BBHex. Send *W09BB.

Command Formats *cont.*

Time Proportional: OUT1CNFG.0 = 0 On/off   **Analog Proportional:** OUT1CNFG.6 = 0   0 - 20 mA
                                          1 PID   1   4 - 20 mA

OUT1CNFG.1 = 0 Reverse   **OUT1CNFG.2** = 0 Auto PID Disable   **OUT1CNFG.3** = 0 Adaptive Disable
              1 Direct   1 Auto PID Enable   1 Adaptive Enable

OUT1CNFG.4 = 0 Anti Wind Up Disable   **OUT1CNFG.5** = 0 Auto PID Stop
              1 Anti Wind Up Enable   1 Auto PID Start

Example: Set PID, Direct, Auto PID Enable, Adaptive Enable, Anti Integral Disable, Auto PID Start. The command data is
           00101111Bin = 2FHex. Send *W0C17.

Command Formats *cont.*

OUT2CNFG.0 = 0 On/off
1 PID

OUT2CNFG.1 = 0 Reverse
1 Direct

OUT2CNFG.2 = 0 Manual PID
1 Auto PID

OUT2CNFG.3 = 0 Ramp Disable
1 Ramp Enable

OUT2CNFG.4 = 0 Soak Disable
1 Soak Enable

OUT2CNFG.765 = 000 Damping 1
001 Damping 2
010 Damping 3
011 Damping 4
100 Damping 5
101 Damping 6
110 Damping 7
111 Damping 8

Example: Set On/Off, Reverse, Auto PID Disable, Ramp, Disable, Soak Disable, Damping 5. The command data is 10000000Bin = 80Hex. Send *W0D85.

Command Formats *cont.*

COMM.PARAMETERS.210 = 000   300   BAUD
                001   600
                010 1200
                011 2400
                100 4800
                101 9600
                110 19200

COMM. PARAMETERS.43 = 00 No Parity
                      01 Odd
                      10 Even
                      11 N/A

COMM. PARAMETERS.5 = 0   7 Bit Data
                   1   8 Bit Data

COMM. PARAMETERS.6 = 0   1 Stop Bit
                  1   2 Stop Bit

Example: Set Baud 9600, Odd, 7 Bit, 1 Stop. The command data is 00001101Bin = 0DHex. Send *W100D.

BUSFORMAT.0 = N/A

BUS FORMAT.1 = 0 No LF
                1 LF

BUS FORMAT.2 = 0 No Echo
                1 Echo

BUSFORMAT.3 = 0 RS-232
            1 RS-485

BUS FORMAT.4 = 0 Continuous
                1 Command

BUS FORMAT.5 = 0 CR
                1 Space

Example: Set Space, Continuous, RS-232, Echo, Line Feed, N/A. The command data is 00000110Bin = 06Hex. Send *W1F06.

OPERATION: *CONFIGURATION MODE*

Command Formats *cont.*

Note ☞ DATAFORMAT is used for V01 command or Continuous Mode (RS-232).

DATAFORMAT.0 = 0 No Status   **DATAFORMAT.1** = 0 No Reading   **DATAFORMAT.2** = 0 No Peak
            1 Alarm Status   1 Reading   1 Peak
DATAFORMAT.3 = 0 No Valley   **DATAFORMAT.6** = 0 No Unit   **DATAFORMAT.7** = N/A
            1 Valley   1 Unit

Example: Set Space, Continuous, RS-232, Echo, Line Feed, N/A. The command data is 00000110Bin = 06Hex. Send *W1F06.

Note ☞ **ADDRESS** is applicable for RS-485 and can be 01 to 199.

Note ☞ **TRANSMIT TIME INTERVAL** is applicable in the RS-232 Continuous Mode which specifies the time between transmissions and the minimum time is 1 second.

Command Formats *cont.*

RDGOFF.0~19 = Offset Data   **RDGOFF.20~22** = DP+2   **RDGOFF.23** = 0 Positive Offset
                                                                                            1 Negative Offset

RDGSC.0~18 = Scale Data   **RDGSC.19** = 0 Direct Scale   **RDGSC.20~23** = DP+1
                                                  1 Reverse Scale

Example: To have an input of 4 to 20 mA displayed as 0 to 100,
The Low input value = min. input value * conversion number = 4(mA) x 500 = 2000
The High input value = max. input vlaue * conversion number = 20(mA) x 500 = 10000 (9999)
where: converison number is a coefficient of conversion between input values and real display range.
The full range of the display = 10000, conversion number = 10000/20 = 500.

Reading Scale
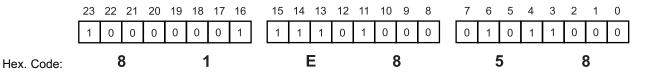

Scale = (UD - LD)/(UI -LI), where: UD - Upper Display, LD - Low Display
UI - Upper Input, LI - Low Input

Scale = (100 - 0)/(9999-2000) = 0.0125016 (These values were obtained from example on previous Section 3: Reading Configuration with Process)

0.0125016 = 125016 x 10^ -7, where 125016 is Reading Scale Data, Decimal Point = 7

RDGSC.23~20 = 8 (DP = 7); RDGSC.19 = 0 (direct scale); RDGSC. 18 ~0 = 1E858Hex (125016 Dec)

Binary Code:

23	22	21	20	19	18	17	16		15	14	13	12	11	10	9	8		7	6	5	4	3	2	1	0
1	0	0	0	0	0	0	1		1	1	1	0	1	0	0	0		0	1	0	1	1	0	0	0

Hex. Code: 8   1   E   8   5   8

Send command: *W1481E858 (scale = 81E858)

Reading Offset

Offset = UD - Scale x UI
Offset = 100 - (0.0125) x (10000) = (-25), where Offset data = 25, Decimal Point = 0, Offset is negative.
RDGOFF.23 = 1 (Offset is negative); RDGOFF.22 ~ 20 = 2 (DP = 0); RDGOFF.19 ~ 0 = 00019Hex (25 Dec)
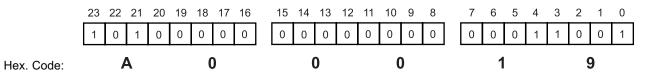

Binary Code:

23	22	21	20	19	18	17	16		15	14	13	12	11	10	9	8		7	6	5	4	3	2	1	0
1	0	1	0	0	0	0	0		0	0	0	0	0	0	0	0		0	0	0	1	1	0	0	1

Hex. Code: **A**   **0**   **0**   **0**   **1**   **9**

Send command: *W03A00019 (offset = A00019)

Note ☞ To communicate when the Continuous Mode is enabled, the Continuous Mode must be stopped by sending 13 Hex (XOFF) and then send ^AE.
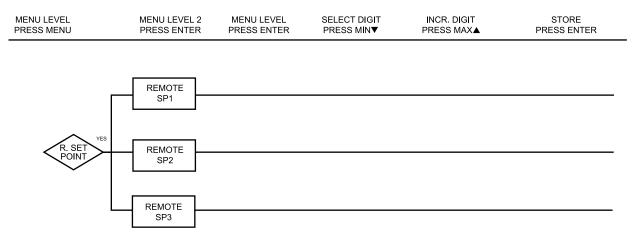

OPERATION: CONFIGURATION MODE

REMOTE SETPOINT 3 SUBMENU:

r.5P.3
275.0

Press ENTER — 9) Display flashes 1st digit of previous selection for "Remote Setpoint 3" value.

Press MAX & MIN — 10) Enter a new "Remote Setpoint 3" value.

Press ENTER — 11) Display flashes "**Strd**" message and the display shows "Reset" ending the *Configuration Mode*.

r5t

RESET:

The controller automatically resets after the last menu of the Configuration Mode has been entered. After the controller resets, the controller advances to the Run Mode.

Note ☞ *In order to select r.SP remotely connect Bi1 and Bi2 as follows:*

	Bi1	Bi2
r.SP.1	GND	GND
r.SP.2	OPEN	GND
r.SP.3	GND	OPEN
Setpoint 1	OPEN	OPEN

Accuracy: See the following Specification Chart.

Resolution: 1°/0.1°; 10 µV process

Temperature Stability: 0.08°C/°C; 50 ppm/°C process

Thermocouple Cold End Tracking: 0.05°C/°C

NMRR: 60 dB

CMRR: 120 dB

A/D Conversion: Dual slope

Reading Rate: 3 samples per second

Digital Filter: Programmable

Display: Dual 4-digit, 7-segment LED, 9.2 mm (0.36"); red process variable, green setpoint; indicators for output and alarm status; 7.6 mm (0.3") for NEMA 12 units

Warmup to Rated Accuracy: 30 min

INPUT

Input Types: Thermocouple, RTD, analog voltage, analog current

Thermocouple Lead Resistance: 100 Ω max

RTD Input: 100/500/1000Ω Pt sensor, 2, 3, or 4-wire; 0.00385 or 0.00392 curve

Voltage Input: 0 to 100 mV, 0 to 1 V, 0 to 10 Vdc

Current Input: 0 to 20 mA (5 ohm load)

Configuration: Single-ended

Polarity: Unipolar

Step Response: 0.7 sec for 99.9%

Decimal Selection: None, 0.1, 0.01 or 0.001

Span Adjustment: 0.001 to 9999 counts

Offset Adjustment: -999 to +9999

CONTROL

Action: Reverse (heat) or direct (cool)

Modes: Time proportioning and proportional control modes; selectable preset tune, adaptive tune, auto-tune, PID, proportional, proportional with integral, proportional with derivative with anti-reset windup, on-off

Rate: 000.0 to 399.9 sec

Reset: 0 to 3999 sec

Cycle Time: 1 to 199 seconds; set to 0 for on/off operation

Gain: 0.5 to 100% of span; setpoints 1 or 2

Damping: 0000 to 0008

Soak: 00.00 to 99.59 (HH:MM), or off

Ramp to Setpoint: 00.00 to 99.59 (HH:MM), or off

Autotune: Operator initiated from front panel

CONTROL OUTPUT:

Relay: 5 A @ 120 Vac, 3 A @ 240 Vac; configurable for on/off, PID or ramp and soak

Output 1: SPDT type   **Output 2:** SPST type

SSR: Rated 0.5 A @ 120/240 Vac, continuous

DC Pulse: non-isolated; 10 Vdc @ 20 mA

Analog Output: 0 to 10 Vdc or 0 to 20 mA; 500 Ω max

OPTIONS:

Remote Setpoint Selection: Up to 3 setpoints stored in memory; contact closure selection

COMMUNICATIONS:

RS-232 or RS-485: 300 to 19.2k baud; completely programmable setup capability; program to transmit current display, alarm status, min/max, actual measured input value and status

RS-485: Addressable from 0 to 199

Connection: Screw terminals

ALARM OUTPUT:

Type: SPST relay, 3 A @ 120 Vac, 3 A @ 240 Vac

Operation: High/low, latching/ non-latching, and process/deviation; front panel configurations

ANALOG OUTPUT:

Isolated 0 to 10 Vdc or 0 to 20 mA, programmable

INSULATION: (per 1 minute test)

Power to TC/RTD input: 2300 Vrms

Power to Relay/SSR Outputs: 2300 Vrms

Power to Relay Alarms: 2300 Vrms

Control Relay/SSR to Control Relay/SSR: 2300 Vrms

Relay Alarm 1 to Relay Alarm 2: 2300 Vrms

RS232/RS485/Analog to Alarms/Controls Relay/SSR/Power: 2300 Vrms

RS232/RS485 to Input TC/RTD: 350 Vrms

APPROVALS:

UL, CE per EN50081-1, EN50082-1, EN61010-1

GENERAL:

Line Voltage: 90-240 Vac +/-10%, 50-400 Hz

Power: 4 Watts

External Fuse Required: 100mA/250V Time-Slow-Blow, UL 248-14 Listed
100mA/250V Time-Lag, IEC 127-3 Listed

Environmental Condition: 0 to 55°C (32 to 131°F), 90% RH non-condensing

1. **Electromagnetic Compatibility (EMC)**
   This device conforms with requirements of EMC Directive 89/336/EEC, amended by 93/68/EEC. This instrument complies with the following EMC Immunity Standards as tested per EN 50082-2, 1995 (Industrial environment)

Phenomena	Test Specification	Basic Standard
Electrostatic Discharge	+/- 4 kV contact discharge +/- 8 kV air discharge	IEC 1000-4-2 Performance Criteria B
Radio Frequency electromagnetic field.	27 - 1000 MHz 10 V/m 80% AM (1 KHz)	IEC 1000-4-3 Performance Criteria A
Radio Frequency electromagnetic field. Pulse modulated.	900 MHz 10 V/m 50% Duty cycle @ 200 Hz	IEC 1000-4-3 Performance Criteria A
Fast Transients	+/- 2 kV (ac mains) +/- 1 kV (dc, signal I/O) 5/50 ns Tr/Th, 5 KHz rep. freq.	IEC 1000-4-4 Performance Criteria B
Radio Frequency conducted	0.15 - 80 MHz 10 V/m 80% AM (1 KHz)	IEC 1000-4-6 Performance Criteria A

This instrument complies with the following EMC Emission Standards as tested per EN 50081-1, 1992 (Residential, Commercial and Light Industrial)

Phenomena	Frequency Range	Limits	Basic Standard
Radiated Emission	30-230 MHz 230-1000 MHz	30 dB_V/m at 10 m 37 dB_V/m at 10 m quasi peak	CISPR 22 Class B
Conducted Emission	0.15-0.5 MHz 0.5-5 MHz 5-30 MHz	66-56 dB_V quasi peak 56 dB_V quasi peak 60 dB_V quasi peak	CISPR 22 Class B

2. **Safety**
   This device conforms with Low Voltage Directive 73/23/EEC, amended by 93/68/EEC. The following LVD requirements have been met to comply with EN 61010-1, 1993
   (Electrical equipment for measurement, control and laboratory use)

   1. Pollution Degree 2
   2. Installation Category II
   3. Double Insulation
   4. Class I Equipment (90-240 Vac Powered Units)

NOTES

NOTES

Warranty

OMEGA ENGINEERING, INC. warrants this unit to be free of defects in materials and workmanship for a period of 13 months from date of purchase. OMEGA Warranty adds an additional one (1) month grace period to the normal one (1) year product warranty to cover handling and shipping time. This ensures that OMEGA's customers receive maximum coverage on each product.

If the unit should malfunction, it must be returned to the factory for evaluation. OMEGA's Customer Service Department will issue an Authorized Return (AR) number immediately upon phone or written request. Upon examination by OMEGA, if the unit is found to be defective it will be repaired or replaced at no charge. However, this WARRANTY is VOID if the unit shows evidence of having been tampered with or shows evidence of being damaged as a result of excessive corrosion; or current, heat, moisture or vibration; improper specification; misapplication; misuse or other operating conditions outside of OMEGA's control. Components which wear or which are damaged by misuse are not warranted. These include contact points, fuses, and triacs.

In addition to our standard warranty period, OMEGA will extend the warranty period for one (1) additional year only if the warranty card enclosed with each instrument is returned to OMEGA.

OMEGA is glad to offer suggestions on the use of its various products. Nevertheless, OMEGA warrants only that the parts manufactured by it will be as specified and free of defects. OMEGA MAKES NO OTHER WARRANTIES OR REPRESENTATIONS OF ANY KIND WHATSOEVER, EXPRESSED OR IMPLIED, EXCEPT THAT OF TITLE, AND ALL IMPLIED WARRANTIES INCLUDING ANY WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE HEREBY DISCLAIMED. LIMITATION OF LIABILITY: The remedies of purchaser set forth herein are exclusive and the total liability of OMEGA with respect to this order, whether based on contract, warranty, negligence, indemnification, strict liability or otherwise, shall not exceed the purchase price of the component upon which liability is based. In no event shall OMEGA be liable for consequential, incidental or special damages.

Every precaution for accuracy has been taken in the preparation of this manual; however, OMEGA neither assumes responsibility for any omissions or errors that may appear nor assumes liability for any damages that result from the use of the products in accordance with the information contained in the manual.

SPECIAL CONDITIONS: Should this equipment be used in any nuclear installation or activity, purchaser will indemnify OMEGA and hold OMEGA harmless from any liability or damage whatsoever arising out of the use of the equipment in such a manner.

Return Requests

Direct all warranty and repair request/inquiries to the OMEGA Customer Service Department. BEFORE RETURNING ANY PRODUCT(S) TO OMEGA, PURCHASER MUST OBTAIN AN AUTHORIZED RETURN (AR) NUMBER FROM OMEGA'S CUSTOMER SERVICE DEPARTMENT (IN ORDER TO AVOID PROCESSING DELAYS). The assigned AR number should then be marked on the outside of the return package and on any correspondence.

The purchaser is responsible for shipping charges, freight, insurance and proper packaging to prevent breakage in transit.

FOR **WARRANTY** RETURNS, please have the following information available BEFORE contacting OMEGA:
1. P.O. number under which the product was PURCHASED,
2. Model and serial number of the product under warranty, and
3. Repair instructions and/or specific problems relative to the product.

FOR **NON-WARRANTY** REPAIRS, consult OMEGA for current repair charges. Have the following information available BEFORE contacting OMEGA:
1. P.O. number to cover the COST of the repair,
2. Model and serial number of product, and
3. Repair instructions and/or specific problems relative to the product.

OMEGA's policy is to make running changes, whenever an improvement is possible. This affords our customers the latest in technology and engineering.

PATENT NOTICE: The "Meter Case Bezel Design" is a trademark of NEWPORT Electronics, Inc., registered in the U.S. USED UNDER LICENSE. This product is covered by one or more of the following patents: U.S. Pat. No. Des. 336,895; 5,274,577/ FRANCE BREVET No. 91 12756/ UK PATENT No. GB2 248 954; GB2 249 837/ SPAIN 2039150; 2048066 / ITALY 1249456; 1250938/ CANADA 2052599; 2052600/ GERMANY DE 41 34398 C2. Other US and International Patents pending or applied for.

Where Do I Find Everything I Need for Process Measurement and Control?
OMEGA...Of Course!
Shop on line at www.omega.com

TEMPERATURE
- ☛ Thermocouple, RTD & thermistor Probes, Connectors, Panels & Assemblies
- ☛ Wire: Thermocouple, RTD & Thermistor
- ☛ Calibrators & Ice Point References
- ☛ Recorders, Controllers & Process Monitors
- ☛ Infrared Pyrometers

PRESSURE, STRAIN AND FORCE
- ☛ Transducers & Strain Gauges
- ☛ Load Cells & Pressure Gauges
- ☛ Displacement Transducers
- ☛ Instrumentation & Accessories

FLOW/LEVEL
- ☛ Rotameters, Gas Mass Flowmeters & Flow Computers
- ☛ Air Velocity Indicators
- ☛ Turbine/Paddlewheel Systems
- ☛ Totalizers & Batch Controllers

pH/CONDUCTIVITY
- ☛ pH Electrodes, Testers & Accessories
- ☛ Benchtop/Laboratory Meters
- ☛ Controllers, Calibrators, Simulators & Pumps
- ☛ Industrial pH & Conductivity Equipment

DATA ACQUISITION
- ☛ Data Acquisition & Engineering Software
- ☛ Communications-Based Acquisition Systems
- ☛ Plug-in Cards for Apple, IBM & Compatibles
- ☛ Datalogging Systems
- ☛ Recorders, Printers & Plotters

HEATERS
- ☛ Heating Cable
- ☛ Cartridge & Strip Heaters
- ☛ Immersion & Band Heaters
- ☛ Flexible Heaters
- ☛ Laboratory Heaters

ENVIRONMENTAL MONITORING AND CONTROL
- ☛ Metering & Control Instrumentation
- ☛ Refractometers
- ☛ Pumps & Tubing
- ☛ Air, Soil & Water Monitors
- ☛ Industrial Water & Wastewater Treatment
- ☛ pH, Conductivity & Dissolved Oxygen Instruments
