**Industrial**  
Panasonic® Batteries

### Stock up on our Alkalines

**P**erformance when it counts! Our Industrials are specially designed to provide a **power reservoir** that enables them to **last longer** — even under the abuse they're likely to take in industrial and professional applications. The chart at the bottom of the page illustrates how our Industrials, from the popular penlight triple "A" to the classic standard size "D" can be depended on to pump out power long after others have faded to black.

With our industrials **high current** and **large capacity** are standard. And they provide consistent performance, even at **low temperatures**. You can confidently stock up on them with economical large bloc purchases, because we back them with a **five year** shelf life guarantee!

As tough as they are, these batteries are still manufactured with the environment in mind. We've **replaced mercury** with new proprietary materials that allow us to still maintain the high level of performance you expect from Panasonic.

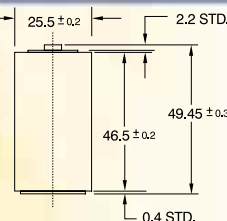

**Made in the USA.** All of our Panasonic Alkaline Batteries are manufactured at our state-of-the-art plant in Columbus, Georgia, to support your crucial lead-times.
