# Mu-metal shields

PHOTONIS 'treated' mu-metal shields provide effective protection against magnetic fields up to 5 mT (depending on the tube type), and exhibit virtually no remanence after exposure to strong fields. All shields surfaces are painted mat black.

Take due care when handling mu-metal shields, strong mechanical shocks or deformations can degrade their magnetic properties.

PHOTONIS also designs customised magnetic shields. Please, contact your local PHOTONIS sales organization if you are interested in a special device.

## for 19 mm

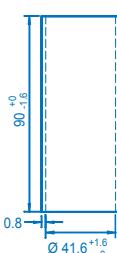

MS178  
suitable for  
all 87 mm long tubes

## for 29 mm

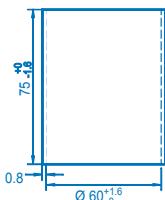

MS179  
suitable for  
all tubes, 98 mm  
long or more

## for 39 mm

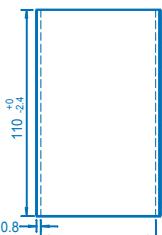

MS170  
all based tubes  
or bare tube  
longer than 92 mm

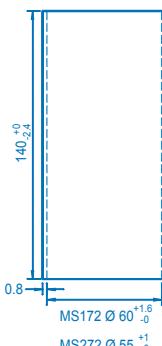

## for 51 mm

MS132  
low profile tubes  
XP5242B,  
XP52Y2B,  
XP6202B

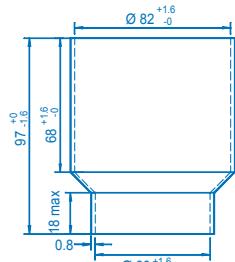

MS152  
fast tubes XP2242B,  
XP2243B, XP2248B  
and XP2212B;  
standard tubes XP220xB  
family, XP3212B, XP3230B  
and all bare tubes  
of 126mm long

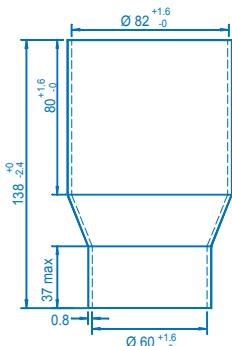

MS172  
MS272  
all others fast tubes

## for 76 mm

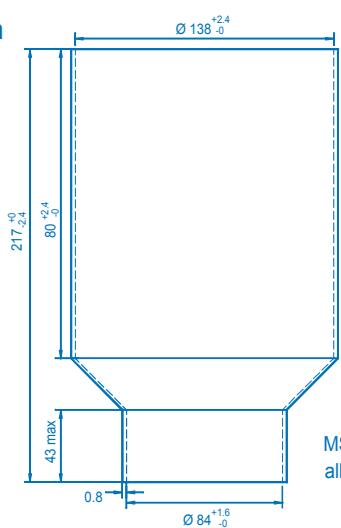

MS133  
low profile tubes X5312B,  
XP53Y2B and XP6302B

MS153  
all others 76 mm tubes

## for 130 mm

MS175  
all XP45xx family tubes

# Voltage dividers

A complete range of voltage dividers is available for PHOTONIS PMTs:

- **customised voltage dividers assemblies, supplied attached to the tubes and well adapted to large quantities.**
- **accessories for fast tubes (S563 family) including voltage divider and mu-metal shield**
- **compact voltage dividers (VDxxx, see next page).**

Though those dividers fulfill most user's requirements, PHOTONIS also designs customised products. Please contact your local PHOTONIS representative.

## Customized assemblies

PHOTONIS designs voltage divider assemblies, an extremely cost effective way of meeting your mechanical and electrical requirements. Supplied attached to the tube and ready for use, these assemblies contain a voltage divider and additional electronic circuitry such as protection resistors and decoupling components. They provide the optimum interface between PMT and your signal-processing circuitry, ensuring the highest signal quality in your application (the first stage of your anode signal amplification chain can be included).

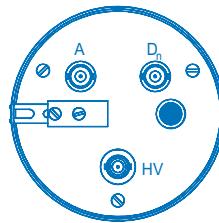

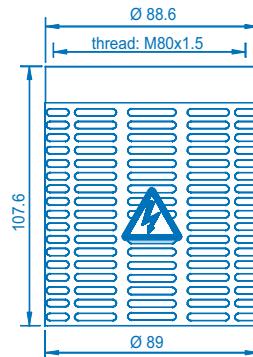

## Voltage divider and shield assemblies for very fast tubes

Special assemblies including a voltage divider and an optional mu-metal shield are available for 2" fast PMTs used to detect very brief low-intensity light pulses in physics experiments using coincidence measurements, Cherenkov light studies, high-speed scintillators, and in single photoelectron counting.

	Voltage divider	+ Front shield =	Voltage divider & Front shield assembly
Fast tubes	S563	S5632/AV	S5632
Ultra fast tubes	S563/04		S5632/04
Length (mm)	108	240	334
Diameter (mm)	90	80	90
Mass (g)	490	4000	4490

See voltage dividers characteristics in the table next page.

S563, S563A, S563/04

## Voltage dividers dimensions (in mm)

### Notes

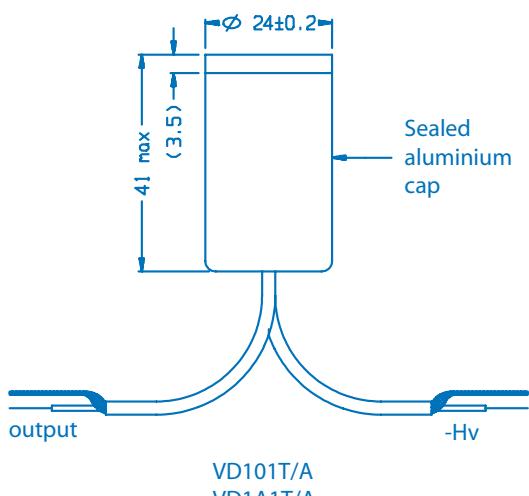

- 1) **A:** iterative voltage divider which maximizes gain;
- B:** progressive voltage divider which optimizes linearity and in most cases the timing characteristics;
- C:** progressive voltage divider for certain fast tubes which provides a good compromise between A-type and B-type dividers for gain, linearity and timing characteristics.
- 2) The mentioned current is the anode current above which the linearity of the PMT is affected by more than 4%, due to the limitation of the divider circuitry; the PMT has however its own linearity, which is not included in this number; see Linearity (p.2 - 14) and Voltage Dividers (p.2 - 19) for more details.
- 3) at max. supply voltage.
- 4) **-HV:** cathode at -HV; anode grounded;  
**+HV:** anode at +HV, cathode grounded.

The VD200K, VD202K, and VD282K families are suitable for both +HV and -HV. They are supplied set for -HV operation. For +HV operation, remove the cap and modify the internal connections according to the instructions supplied with the base.

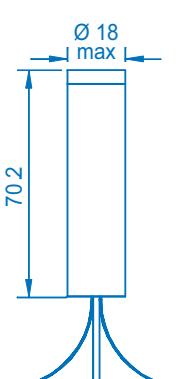

- 5) possible voltage adjustments with internal trimmer:

**VD105K:** G1 and G2 voltages;  
**VD105K/01:** G1 voltage;  
**VD105K/02:** G1 voltage;  
**VD122K:** D2 voltage;  
**VD123K:** G voltage;  
**VD124K:** G1 and D2 voltages;  
**VD305K/B:** G1 and G2 voltages;

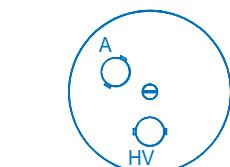

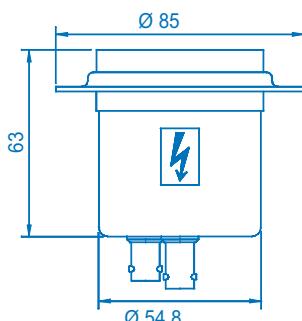

- 6) The last 3 stages are transistorized, stabilizing the dynode voltages to within 1 V at up to 100  $\mu$ A and above.

# Sockets

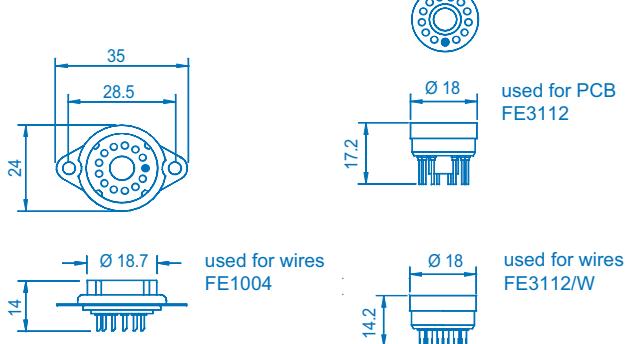

Care has been taken in the design and manufacture of these sockets. High-grade insulating and contact materials ensure optimal results over a long operating life.

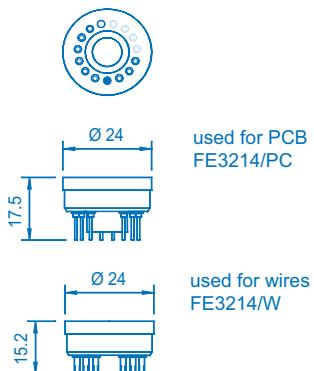

The data given in Part 4 of this catalogue are only guaranteed when the tubes are used with the original PHOTONIS sockets.

A PHOTONIS PMT and a PHOTONIS socket - the perfect match.
