

# EEL clean room Daq and readout update

- Equipped four layers on the cosmic stand as well as the layers on the two assembly tables outside of the cosmic stand with repaired back planes and APV cards
- Troubleshoot few connections issues and tested DAQ for the four layers on the cosmic stand
- Performed a long cosmic test with the 4 layers on the cosmic stand and collected nearly 2.5 M cosmic events before we stopped it
- CODA was pretty much stable during the test

# Results of recent cosmic test (R. N. 4160)

No connection issues
