Pi- simulation

full lines: Moller
dashed lines: Pi-

Black: open
Red: transition
Green: closed

- Yuxiang and I managed to track down the source of the discrepancy we saw in my Moller rates (Geant4 version)
- The new results agree very well specifically in sector 5

- the blue discrepancy is probably due to low statistics on my part (only ran 2M events)
- the yellow discrepancy is due to not matching rings 4 and 5 radii to not leave any region out in YZ's script
- the purple discrepancy is my extra cuts in my analysis (collimation cut, particle ID, detector ID)
