# Cerenkov Calibration(Left Arm)

- Align pedestal to 0

# Cerenkov Calibration(Left Arm)

- Align pedestal to 0

# Cerenkov Calibration(Left Arm)

- Check the pedestal values in DataBase

PMT	1	2	3	4	5
Ped Value	489.4	439.3	475.8	457.5	594.7
PMT	6	7	8	9	10
Ped Value	563.6	589.4	520.8	529.7	501.6

- New pedestal values

PMT	1	2	3	4	5
Ped Value	490.6	440.5	476.8	458.9	596.1
PMT	6	7	8	9	10
Ped Value	565.0	591.0	521.8	531.1	503.4

# Cerenkov Calibration(Left Arm)

- Align Single Photon Electron Peak to 100

# Cerenkov Calibration(Left Arm)

- Align Single Photon Electron Peak to 100

# Cerenkov Calibration(Left Arm)

- $$C_i = \frac{100}{M_i^{SPE} - M_i^{PED}}$$

- Amplitude transformation coefficients in DB

PMT	1	2	3	4	5
Coeff	1.023	1.112	1.052	1.092	1.001
PMT	6	7	8	9	10
Coeff	0.931	1.157	1.062	1.116	1.131

- New coefficients

PMT	1	2	3	4	5
Coeff	0.956	1.048	0.984	1.086	0.978
PMT	6	7	8	9	10
Coeff	0.875	1.219	1.105	1.180	1.196

# Cerenkov Calibration(Left Arm)

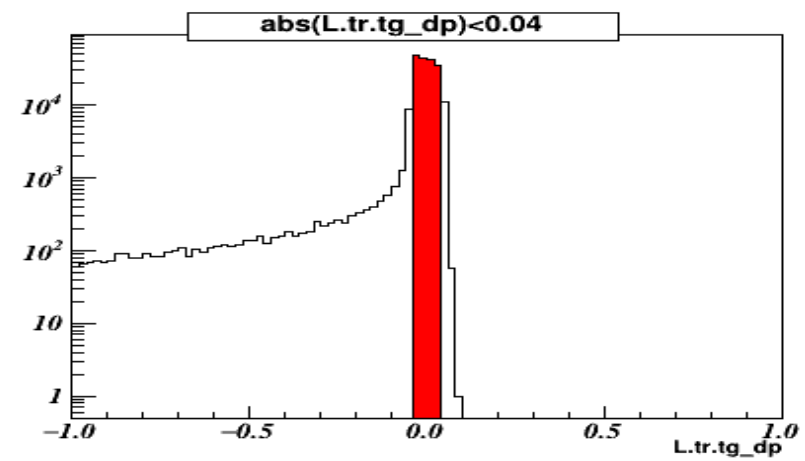

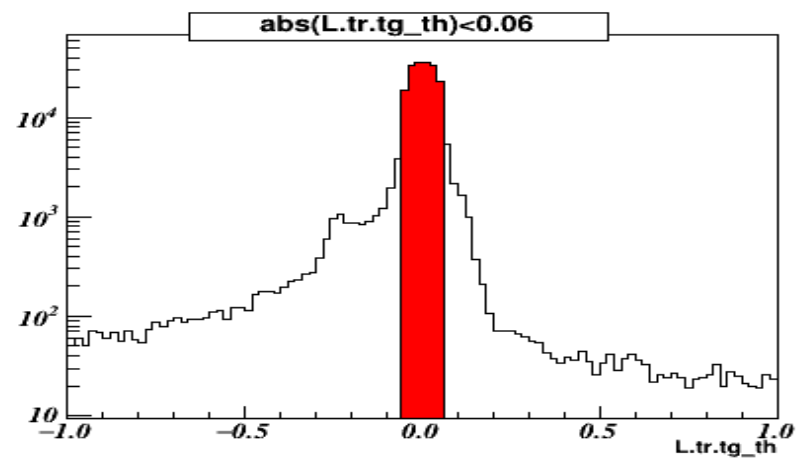

- Corrected ADC

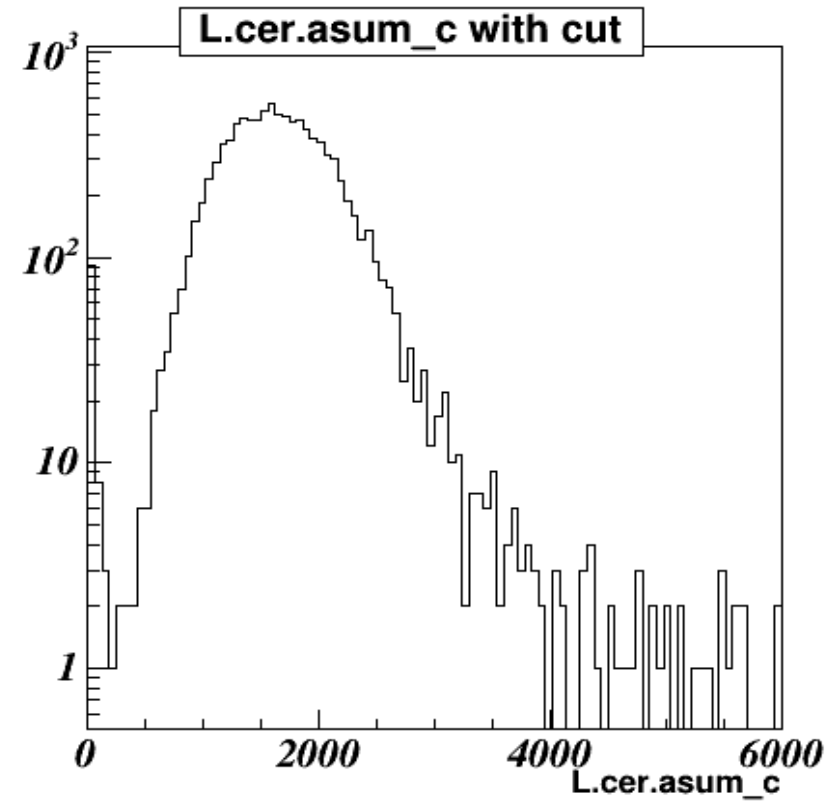

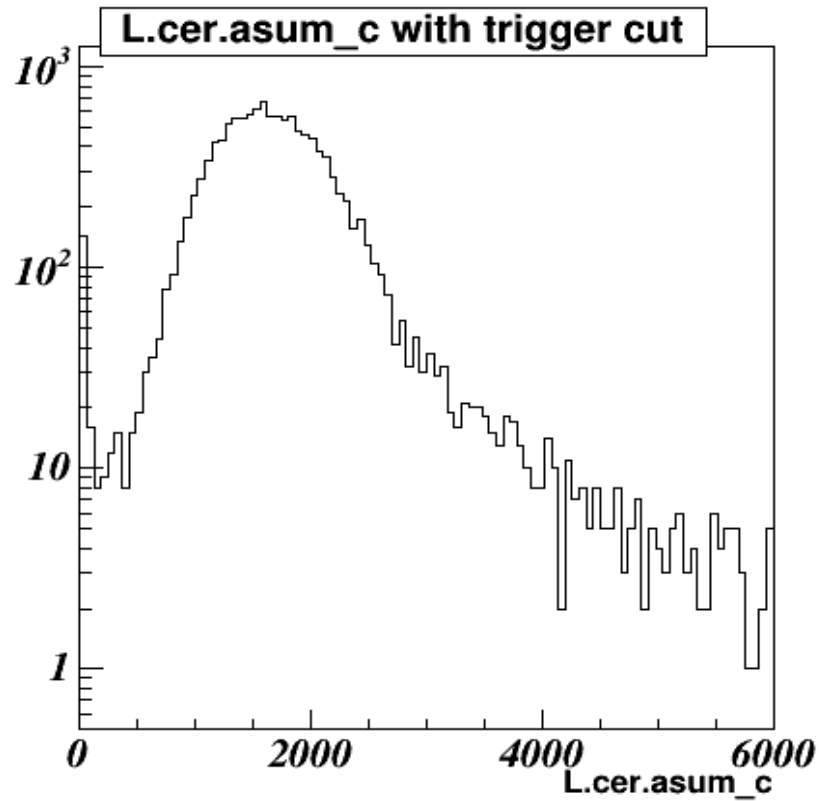

# PID Study

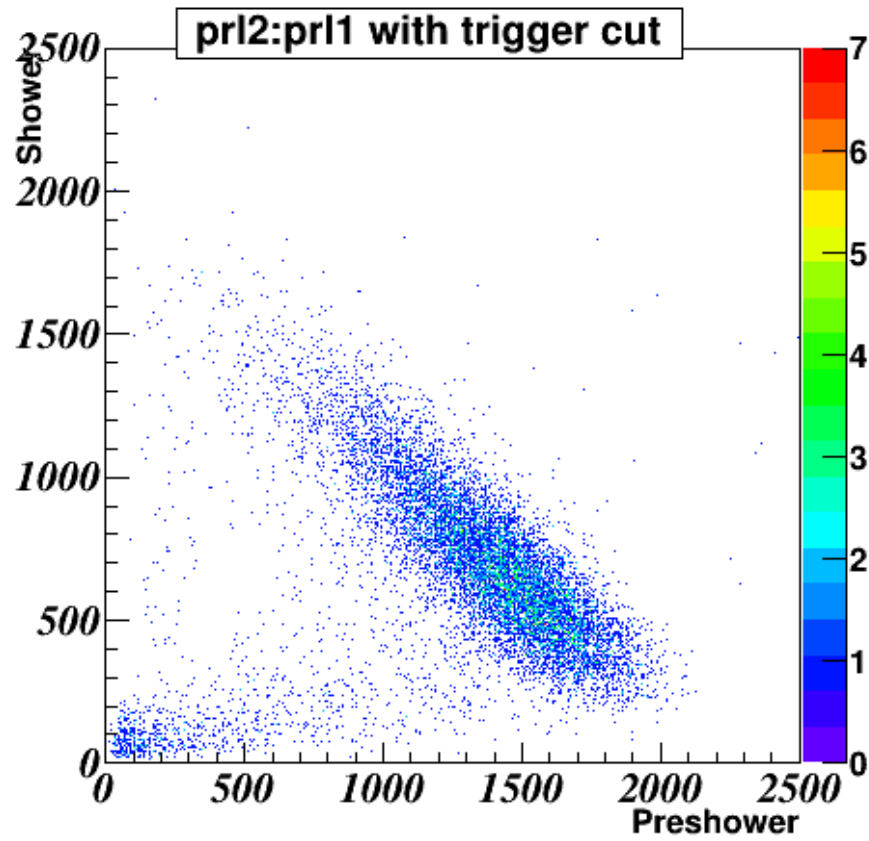

- Run 811(Ar, Production, Kin2, 18uA, 60min)
  - Beam Energy=2.2GeV, Leftarm\_p=1.716GeV, Leftarm\_theta=20
- Good Events Cuts:
  - single trigger on the left      (T3 = (S0&&S2) && (GC || PR) [LEFT])
  - track number ==1
  - Acceptance Cuts
    - $\text{abs}(\text{L.tr.tg\_ph}) < 0.04$
    - $\text{abs}(\text{L.tr.tg\_th}) < 0.06$
    - $\text{abs}(\text{L.tr.tg\_dp}) < 0.04$

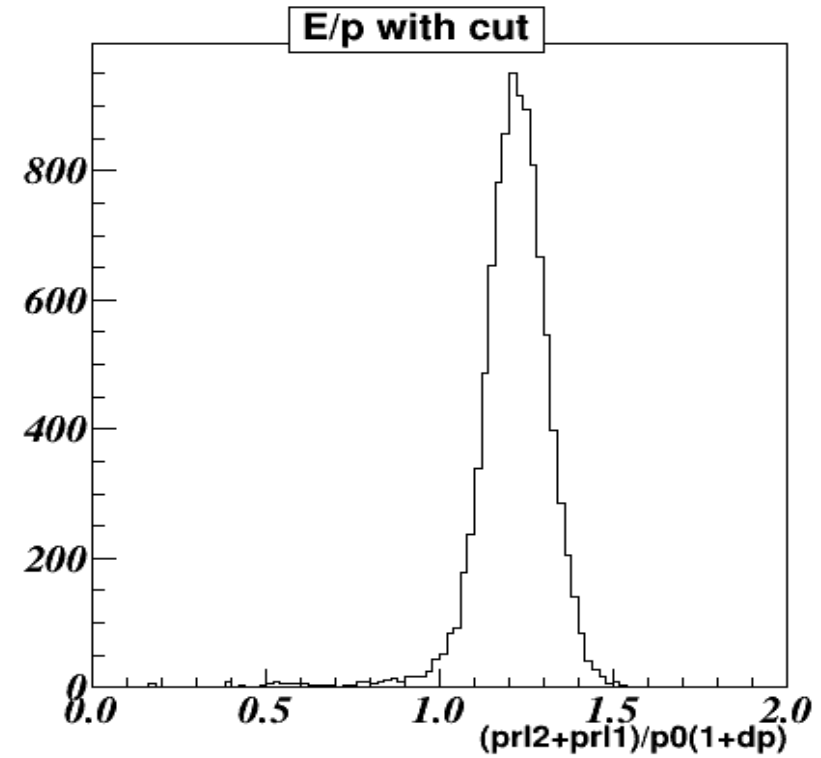

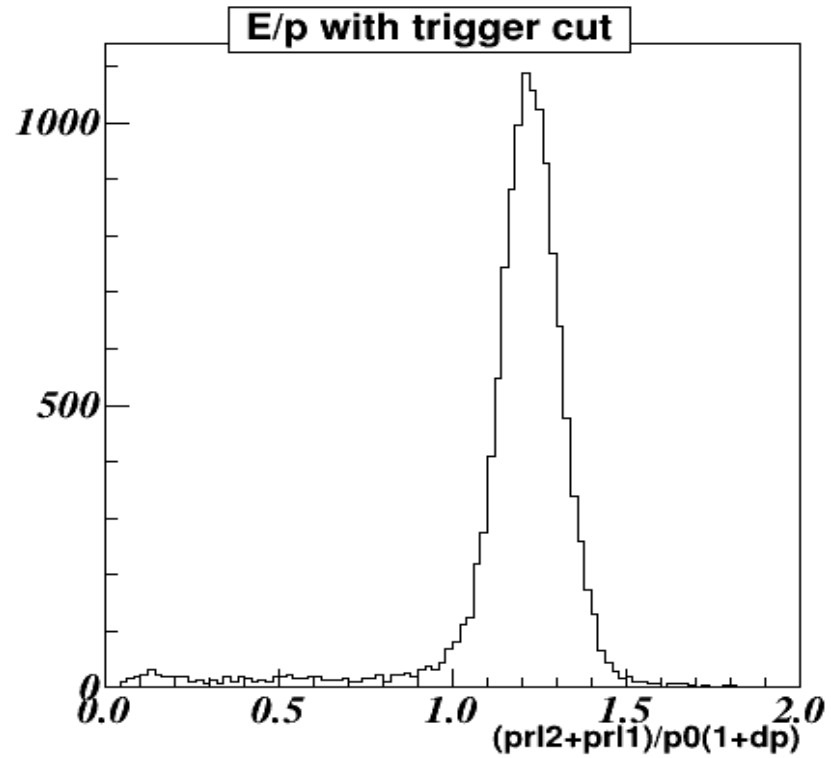

# Cerenkov ADC Sum

# Shower vs. Preshower

# Total energy deposit in Preshower and shower(E/p)

# Conclusion

- No pion contamination in these runs
